Mr. Pain, you mentioned that many keydown competitors "have a great knowledge of RF". You'd think that those great minds would realize that these events should at least be held at night, well after the MUF has gone below 27 MHz so as not to propagate and disturb the rest of the world. At the incredible wattage mentioned in some of the other posts, you'd want to go below the LUF as a matter of fact, yes? Or is there no concern for the folks on the other side of the world that WILL hear the goings-on?

## 9. Re: for my health

Newsgroup: rec.radio.cb
Date: 2001-02-01 01:01:52 UTC
From: Jay in the Mojave <jay123a@qnet.com>
Message-ID: <3A78B57F.B14FBDED@qnet.com>
Source record: 71716

Hello Train: Funny you menationed that!

Have a guy coming over to show me his modified SB220. It has the power supply removed from the amp chassie, and a additional two more 3-500Z's added. Bitchen!

It has a external power supply, with a thunderously heavy set of transformers in it. And a trick little look a like smaller amp as a driver.

Where probably gonna do some medical experimenation 2.

Jay in the Mojave

Never buy radios on the net always buy amps cheaper to fix than old radios.Also most people who you buy a old radio from will sell you thirty year old junk and you can go through just about all avenues to try to get them but they always say "sold as is no refunds".Take your lesson for next time deal face to face or c.o.d with bank check so you could stop payment.

I think you missed the point. Your continued homage to Boobner only
irritates and adds to the problem.
In order to put an end to the Booner era all who continue posting to or
about him will have to join the killfile of those who are trying to maintain
some semblance of the NG past. Your choice Phoneman? You are already
conversing with twist who is a ghost on my screen.

I thought about buying one to melt plastic together. Would that be illegal?
Can you by these RF heat sealers legally?

It's amusing in a sad sort of way. Some guy reports that he is selling a gray market radio on some auction site and bam, someone else posts a note that it's been forwarded to the authorities. This is promptly followed by a response from the original poster stating that the second is going to his killfile. Fine. So the first goes on, blissfully thinking that all is well and continues to post, and the second guy continues to take mediction for hypertension. The smart money goes on the nose of the guy who never posts at all, but just finds out who the dealers/manufacturers are, and quietly sends notes to their ip's.

You can save yourself the trouble of showing up at one of these events to see what goes on there. Just check out the web site below, and look at some of the photos etc. Go to the links at the bottom of the page.

http://www.bigradios.com/

I wonder how many of those idiots fry the electronics in their vehicles from too much RF? I'm not talking about the guy doing the keyup either. What about all the vehicles around? Then have to haul the hulk home hanging off the back of a tow truck. 8-)) The electronics in modern vehicles was never designed to operate reliably in the RF environment found at these "events".

The newer the vehicle the higher the electronic content. So much so that the automotive industry will be switching over to a 42 volt DC bus in the next few years. Possibly a dual voltage system, 42 volt / 14 volt. The reason being is the rising electronics content, with the rising current demand. The weight, and size of the wire harness with connectors is getting to be a big problem. Since I work in the power electronics field I have seen some companies starting to market power devices designed for the new up and coming automotive electrical system voltage standard.

The article below is from PCIM magazine (www.pcim.com).

---
---
Automotive Power: Future System Architectures Face Formidable Hurdles
John M. Miller, Paul R. Nicastri, Shahrarn Zarei, Ford Motor Co., Dearborn, Michigan

Potential new, higher powered electrical features and functions in the automobile are being paced by the daunting challenge to install sufficient capacity, manage complexity and maintain an affordable system.

During the past two decades, the growth in automotive electrical and electronic content has been primarily in mechatronic systems: antilock brakes that use electrical control over the hydraulic system, or electrical control over steering systems. Mechatronics means the application of

electronics to control previously all-mechanical systems for the realization of improved performance. Today, it is infotronics (coined by the organizers of the 1998 Convergence Conference), a term used to reflect the trend to more information processing capability in the automobile. With the introduction of the auto-PC, the automobile will have entered the information age in force. During the automotive near term (10-15 years) the technology pendulum may well swing from the present electronic to a more electrical focus as previously mechanically driven systems become "electrified."

Today's capacity pressures will be exacerbated by the need to electrically power electrified ancillaries, such as engine valve actuators, exhaust gas aftertreatment, active suspensions, all-electric steering, braking and the power to drive pumps, fans and compressors.

Various architectures have been proposed for the next-generation automotive electrical power system. How market forces will act to shape the eventual implementation of currently proposed architectures is a matter for debate. What is certain is that today's 14V, point-to-point electrical distribution system will eventually become inadequate to power future cars and light trucks. When the transition will occur is unclear, but likely during the near term.

Whether or not suppliers will accept the burden of retooling high volume components and subsystems for a higher distribution voltage electrical system will depend on the economics of the proposed system. It is clear that the inefficiencies of today's 14V electrical system are contributing to lower fuel economy, not only because of the poor fuel to electrical energy conversion, but because of the higher weight and package volume required to support an already inefficient system. This downward spiral cannot be expected to continue if future personal transportation vehicles are mandated to meet more stringent fuel economy and emissions regulations.

Global standardization of the new architecture will promote commonization of electrical and electronic content. Acceptance of open architectures for both power and communications will foster the introduction of future infotronic and mechatronic systems. An example for infotronic system and open architecture is the communications architecture to support multimedia applications[1]. The idea of communications for multimedia applications is to create an infrastructure within the vehicle architecture in which mobile multimedia devices can function in a "plug-and-play" environment to provide a seamless information link between home, office and vehicle by combining technologies such as Internet, voice recognition, real-time dynamic route guidance, GPS, DVD, audio, cellular and satellite information systems.

There is now a renewed interest in investigating the means to implement a more efficient and higher power quality electrical system. Following on the heels of the earlier SAE (Society for Automotive Engineering) dual and higher voltage committee, the present MIT/Industry Consortium on Advanced Automotive Electrical and Electronic Systems and Components[2] is actively pursuing the definition of, and issues related to, dual voltage electrical supply and distribution.

Capacity and Complexity
During most of automotive history, the year over year introduction of electrical ancillaries and accessories has contributed to an exponential growth in both charging system capacity and complexity. Capacity growth reflects the degree by which the automobile slowly becomes more electrified. Attendant to this growth in features and functions has been the consequent exponential growth in wiring harness complexity. Figures 1 and 2 illustrate these historical trends.

Passenger car electrical growth is actually composed of many discrete steps as new features and functions are introduced. In Figure 1, this fine detail is averaged out within the five-year bins. The discontinuity in current in Figure 1 is due to the vehicle
Figure 1. Historical growth in capacity.
system voltage change from 6V to 12V during the mid-1950s. Generation power has exhibited monotonic increase, and is projected to continue this trend into the near term. When the capacity curve plateaus out is a matter of debate, but it cannot continue to climb exponentially for too many more years. For vehicles used for personal transportation, the installed electrical capacity will eventually stabilize at some fixed fraction of heat engine power capability. We believe this will occur when the vehicle electrical capacity approaches 3kW.

Figure 2. Wire harness complexity growth. (Courtesy United Technologies Automotive) Growth in the number of circuits in a high-end vehicle exhibits exponential growth that tracks the trends in installed generation capacity. In Figure 2, a circuit or cut lead, is the wire needed to make a point-to-point interconnection in the vehicle wire harness. The number of connector pins is generally less
than the number of cut leads due to the use of splices, grouped ground leads and daisy chained terminations.

It has only been during the past two decades that electrical/electronic growth has trended above the historical rate of 3%/year, reaching somewhat over 4%/year in recent times[3]. The ability of the vehicle generator to source multikilowatt power and of the vehicle electrical distribution system to efficiently supply that power to various electrical consumers, clearly cannot be done in an affordable manner for much longer, if even now. Certainly, if tomorrow's electrical demand increases from the present 1.2kW to 2.0kW, the 14V alternator can be uprated to handle the burden. If in subsequent years the demand increases according to projections, it will still be possible to supply even higher power levels. The cost will become disproportionately higher, but it can be done. The objective now is to determine when in time the present 14V system can be economically replaced by a higher voltage or dual voltage electrical system.

Figure 3 extrapolates present growth trends and takes into account the fundamental limitations on low voltage generators, to make the assertion that the transition point should occur when the burden on today's 14V system reaches 3kW.
Interpreting Figure 3 from a power supply view point - can component manufacturers build low voltage alternators economically when current levels

Figure 3. Projected load growth. Upper dashed curve is amps at 14V, lower dashed curve is amps at 42V. Solid curve is system power.
exceed 200A? Winding such a generator will require the placement of multiple strands of heavy gauge wire into small slots in a pancake geometry. Distribution of such high currents to the central power distribution boxes requires heavy gauge wire and larger megafuses for protection. We believe a change is needed. Figure 3 shows the effect on current when the generation voltage is increased to 42V. This change essentially represents a reset to much smaller wire gauge to source and deliver the same power.

New Architectures

Figure 4. Present automotive electrical system. Candidate electrical power supply architectures are broadly defined as those generating multiple voltages at the source and those developing multiple voltages by use of electronic converters. In both cases, the
limiting case architecture is one that migrates, or evolves, to a single, higher voltage system. Based on historical precedent, standards setting organizations' recommendations and past studies of electrical shock - the automotive industry recognizes the need to adhere to supply voltages that are considered safe for an open-wire architecture. The upper limit on safe voltage is widely recognized as 60Vdc[4].

The present electrical system consists of a 14V source, a single electrical storage element, one or more power distribution centers and point-to-point wiring to the loads.

Existing automotive power supplies and electrical distribution systems rely on electrical storage to filter and assist in the regulation of the bus voltage. All electrical loads are fed from a power distribution box or junction box close to the central charging system.

An alternative to today's electrical system employs a DC/DC converter, fed from a single output generator and with electrical storage at each voltage level, to implement a dual voltage power supply. Power distribution centers, called power distribution boxes (PDBs), are used to contain the circuit and component protection and to act as the origination point for all the branch circuits.

The salient feature of the converter-based power system architecture is the use of electronic switching for voltage level translation and regulation. Electrical storage is used at both voltage levels, but this is not essential unless some critical function must have power supply during engine off periods. When dual voltage is available, electrical loads become segregated with high power loads migrating to the high voltage bus and low power (typically electronic) loads remaining on the low voltage bus. The low voltage bus level can evolve to even lower voltages in this architecture or even become decentralized.

If the converter based architecture above can be described as a "silicon" intensive implementation, then its dual-voltage generator counterpart can be described as "copper" intensive to reflect the fact that machine windings are employed as the mechanism to supply a dual voltage bus. Whether or not

electrical storage is mandated at each voltage level is a matter of architecture design and vehicle mission requirements. In the automotive context, mission is providing the customer reliable and comfortable transportation at an affordable price.

The salient feature of the dual stator power architecture is the minimal use of electronic switching. Because two independent outputs from a single electrical generator cannot be regulated from only the field control (input C1), a second control input, (duty cycle C2), is necessary. In this architecture, thyristors are used as the second control element. The distinguishing feature of the dual stator architecture is that the thyristor bridge handles only unidirectional power flow, whereas the converter-based power architecture has the capability for bidirectional power flow. The necessity for bidirectional power flow (e.g., energy transfer between the two voltage buses) will determine which is implemented.

Suppliers
The successful transition to a new electrical architecture requires the participation and dedication of not only the OEM but the supply base manufacturers as well. If the transition consisted of only the need to retool from a 14V component base to a 42V component base, then the transition could be executed quickly and economically; which is not to say, without risk. However, because of the complexity of today's automobile and the realization that not all vehicle lines would need to change at once, it becomes necessary to maintain backward compatibility with the previous generation architecture. A single, higher voltage architecture, though desirable, cannot be realized and still maintain compatibility with the existing product base. During the transition years, the product mix may last for as long as two decades. The necessity for backward compatibility requires a dual voltage electrical system so that parts of the old system can co-exist with the new, even in the same vehicle. This mix of outgoing architecture with the incoming architecture poses a burden on the OEM due to higher complexity and inventory cost, but at the same time offers the supplier a respite by prolonging the transition period.

Not all components and subsystems need be converted at once, only those that offer the most economical benefit to the OEM and supplier. Such systems will not only benefit from the availability of higher voltage, but may in fact not be feasible without it. Systems such as engine electromechanical valve actuation that require an average of 125W/valve are impractical at 12V. The requirement to achieve sub-millisecond response driving an inductive load bears this out. A similar analogy would be the audio system power amplifier that achieves wide power bandwidth while driving an inductive load. A further analogy would be an electric brake actuator that cannot tolerate any delay.

Referring again to Figures 5 and 6, you can see that the key architecture components are the generators, batteries, converter when needed, one or more power distribution boxes and the electrical loads. Electrical loads that benefit directly from the availability of higher voltage supply are:

Inductive loads such as solenoids, voice coil motors, and ballasted lighting (electroluminescent, fluorescent and high intensity discharge)
Loads from which fast response is demanded, such as valve

Figure 5. Converter based dual voltage architecture.

Figure 6. Dual stator electric machine architecture.

actuators, injectors and ignition coil drivers
Loads that are inherently high voltage, such as ballasted lighting, ultrasonic motors and exhaust gas aftertreatment

Other classes of loads do not benefit directly or inherently from the availability of higher voltage, but rather provide a better match between the power supply and load because of the higher potential. Examples include:

Pumps, fans and compressor drive motors such as engine coolant or oil pumps, air-conditioning blower fan or engine cooling fan, and the air-conditioning compressor drive itself due to the high power levels involved
Audio premium sound power amplifiers
Capacitive discharge actuators
Certain clutch actuators
For the final class of high power electrical loads, the availability of a higher voltage itself becomes an enabler. This is the case for power electronics in conventional automobile systems. Today there is no real precedent for power electronics in the automobile. (We are not considering electric or hybrid electric vehicles.) It has been shown that at voltage levels safe for open wiring, and for which power MOSFETs are the preferred semiconductor switch, the cost of power electronics needed is minimal for voltages in the range of 24V to 48V, given better regulation of the higher voltage. For example, the power electronics needed to implement an adjustable speed drive (cooling fan, coolant pump, blower motor or power steering motor). The case for this has already been made[2].

Supplier involvement is necessary to realize minimum cost implementations for the following key architectural components:

42V generator that has built-in protection to clamp and minimize load shedding transients.
12V and 36V battery of appropriate technology to minimize the total on-board energy storage, yet provide a degree of redundancy.
DC-DC converter that is low cost, rugged, and provides adequate bus voltage stabilization.
(The cases for unidirectional versus bidirectional and isolated versus non-isolated are not considered here.)

Dual voltage power distribution box and junction box implementations that provide the necessary fusing and protection of the vehicle distribution system for
the prescribed level of circuit criticality.
The electrical loads themselves, some of which may benefit more from technologies not now considered affordable because of the lack of higher voltage (e.g., piezoelectric motors) and ballasted lighting.
A good illustration of supplier involvement is in the concurrent design of

an automotive power distribution box for a dual voltage distribution system. This is a key component, that must be completely integrated into the electrical wiring harness and vehicle body in a vehicle systems engineering sense.

Figure 7. Power distribution box (PDB) for dual voltage system. The dual voltage PDB will supply 42V to the high power/high energy loads that benefit from higher voltage while providing 14V to the loads which don't prefer higher operating voltage (e.g., logic modules and sensors) or haven't yet migrated to the 42V side. The smart power semiconductors will be integrated into this PDB to provide not only desirable electronic load control but also electronic fuse function and load monitoring/diagnostic. The additions of voltage/current (V/I) sensors will offer capabilities to monitor batteries and operating loads for overall system diagnostics and, eventually, prognostics.

Standards
Standards are possibly the most critical aspect of a new architecture - the definition and adoption of global standards that set forth the specifications for the new architecture. In the case of the 42/14V electrical system, the work of the Forum Bordnetz has resulted in the establishment of a
Figure 8. 42V bus voltage specification.
preliminary specification for both the 42V and 14V buses. Figure 8 illustrates both the bus voltage proposal and the proposed specification for power semiconductor devices employed as power switches on the high voltage bus.

Specifications for the low voltage bus exhibit the new regulation constraint of less than 1.3X voltage variability from nominal. At this time the bus voltage ranges are not completely defined, only agreement that regulation should minimize the extent of over/under voltage transitions to within the 1.3X range. Semiconductor voltage specifications are tentative and require more standards activity.

The need for standards exists for fuses, connectors, wiring and switches in a 42V electrical system. Today's automotive components are rated to 32V, which is insufficient for tomorrow's electrical system architecture. Component development and standardization is needed.

Standardization of the new electrical system nomenclature, logo and components marking have been developed. The need for inventory control and component marking will be crucial during the transition period when a mix of technology is in the product. For the vehicle 42V architecture, the logo and nomenclature have been agreed to and accepted by members of the MIT/Industry Consortium.

Similarly, for the retooled 42V components, there is a recommended marking to differentiate the components. The 42V symbol is clear, unambiguous and unmistakable when applied to the new architecture components.

Transition
Transitioning to a new electrical power distribution system will be a matter of individual company choice and driven by customer demand for certain features and functions. Perhaps some motivation will come from regulated or otherwise mandated functions necessary to meet fuel economy or emissions requirements.

The cost of transition will likely be significant, so it is probable that the initial applications will be on vehicles that can clearly show that the added cost is justified by (at the initiation of Daimler-Benz AG) the value perceived by the customer. That value will likely be because of the features enabled by the availability of a high voltage bus, not by the high voltage bus alone.

Acknowledgment
The authors wish to acknowledge the support received from the members of the MIT/Industry Consortium on Advanced Automotive Electrical and Electronic Components and Systems, co-directors Prof. John G. Kassakian and Dr. Tom Jahns. We especially thank Dr. Hans-Peter Schoner, Daimler-Benz AG Research and Development, for leading the effort on 42V PowerNet logo and nomenclature.

VOOBNER FAQ

-Who is Aaron Voobner?

Aaron is a guy who responds to the supporters of illegal CB, many of whom dominate the rec.radio.cb newsgroup and otherwise attempt to intimidate proponents of legal CB operation.

-Are you a real guy?

Yes, Aaron is a real guy and his name really is Aaron H. Voobner. Despite being the subject of a *desperate* search by illegal CB'ers in the USA, his personal information remains readily available on several legitimate databases.

-Is Aaron Voobner N8WWM?

No. I don't use profanity and I don't post porno.

-Why do you hate illegal/outlaw CBers?

Their big amps screw up the CB band for other users. Thier stealing channels from government and hams is just plain dishonest. Plus, their antics draw heat from authorities onto legitimate CB users.

- So why don't you just make your point and then go away? You're being "rude" to illegals by contantly poking your nose where it doesn't belong.

Reason #1. I don't respect people who have no respect for anyone else.

A new breed of "outlaw" CBer came along recently: folks with no respect for any one or any law. Folks who think they have a "right" to operate illegal CB and not be criticized for it. These "anything goes" people took over the CB band from the fine folks who were there for decades, and in many cases forced them off the air. These are the same idiots who post amp and freeband crap in the newsgroup and are rude to anybody who disagrees withe them.

Reason #2. Idiots need to be told they are idiots, until they stop being idiots.

The reason there are 5,000 watt amps on your local CB channels is because people tolerate it. No one dares complain. Everyone minds their own business. No one wants to get involved. The idiots get "respect" -- so they proliferate.

- But you're just riling up the illegals and making them angry. That's not being a responsible person.

There is nothing responsible about operating illegally. Illegal CB operation is done irrespective of FCC Part 95 and it's intended purpose. Loudmouthed, irresponsible individuals who promote illegal CB operation deserve little, if any respect from legal CBers. They give legal CBers a bad name in the eyes of the public.

-You're driving CBers away from the amateur radio hobby by making them hate hams.

I am not making anyone "hate hams" because I am not a ham myself. And it is doubtful that CBers who openly despise the FCC, flaunt rules, and have no consideration for other radio ops would be good "potential hams".

-You can't stop people from posting. It's perfectly legal to talk about illegal CB.

I don't try to stop anyone from posting. Talking about illegal CB is protected under the US Constitution under Freedom Of Speech. However, my criticism of illegal CB is also protected. You don't like it, don't read it.

-But you accuse innocent people of operating illegally.

I don't "accuse" anyone. I ask questions. And in any case, I have no authority to arrest or prosecute anyone, so why be so paranoid?

-But it's slander.

You mean libel. Slander is spoken. Libel is written. I hardly think it's "libelous" to ask someone who just finished bragging about "dropping the maul" or "calling CQ on 555" if they are an illegal CB'er.

But if you think you have a case against me, you are welcome to pursue it. Your attorney will quickly tell you that you can't sue someone who calls you an idiot or disagrees with you in a Usenet newsgroup.

-So why don't you go to a CB coffee break and harass people?

I reserve the right to choose my own methods, thank you. I also express my opinions to legislators, auction sites, equipment manufacturers, amateur radio organizations, law enforcement agencies and public officials.

-Are you a wanna-be RF cop?

Nope. If I was, I'd be in here harassing people about antenna height and the 150 mile limit. That's Barney Fife, not me. It's not RULES I'm concerned with. It's illegal CBers BEHAVIOR. It's inconsiderate behavior of selfish idiots - who just happen to be breaking FCC rules.

- But illegal CBers are just bending the law. Like the Minutemen of the Revolutionary War. Or Rosa Parks during the Civil Rights protests.

Give me a break. There's nothing NOBLE about stealing frequencies that do not belong to you or locking up your local channels with a 1KW amp.

If you truly wanted to effect legislative change, you'd do it within the system.

-Are you a flamer?

No, but if I'm flamed, sometimes I'll flame back. Depends.

-But you're screwing up the newsgroup.

I'm sorry, but this newsgroup was screwed up LONG before I ever came. And if my opinions about legal CB "screw you up", then you have bigger problems than me.

-Can't you realize that your anti-illegal CB postings are useless?

Perhaps. And perhaps not. It is hoped that continued criticism of and opposition to illegal CB practices (such as "keydowns", CB amps, etc.) offends the self-proclaimed illegals to the degree that most of them will eventually get tired of the newsgroup and go away. That will open up rec.radio.cb for discussing the topic it was intended for: CB radio.

I want to buy an 'illegal' CB off the Internet. I had a Galaxy I picked up in HK a few years ago. I should never have sold it. Can someone recommend a unit 26MHz - 29MHz (ish) fully frequency selectable. LSB USB AM FM frequency display...around 25W PEP (more if possible). Also an on-line reliable dealer who I can get it from (modded if necessary). Thanks...Andrew

Well... for one, you're not required to pass the code exam with a 100%, any more than you are on the writtens (70% grade passes). But...1 minute correct copy out of 5 minutes total = a 20% passing grade..... Are you arguing that that is TOO MUCH to ask? <GRIN> Code is singled out as worthy of testing because it is radio communication in it's MOST BASIC & SIMPLEST form... no other mode can convey information as reliably or as far.... pick a freq and any other mode, none can compete with CW for gettin thru. The only thing needed on the other end to translate it is a human brain and a pair of ears. An Italian who knows no English can still copy 100% of an English CW transmission... he just can't read it. Try that with SSB.

Now????? There've been books available with the questions & answers since the late 30's!!! They weren't as common as today, but they were there. At that time they were technically illegal.... but the FCC never stepped in to stop thier being published.

> Anybody willing to
> spend some time with a higliter, marking the correct answers in the study

Admittedly, the exams are awfully easy, but com'on Leland.... didn't you learn something as you 'studied' for your exams?

Hi Russ,
A friend of mine had both and on his station the ears were about the same
but the ABS1600 coused TVI problems so he went to the IMAX2000 and he likes
it because he does not have the TVI problem near as bad.

Tell it to the judge. The law refers to POSSESSION of the amplifier. Whether or not it is in use is not a factor.

New Topic: After you tie the rat to the antenna and cook it, do you eat it all at one time or do you save some for later? (The entire cast of Survivor-2 is waiting for your answer). :)

Thanks, Matey.

Message-ID: <mCde6.8181$8k.1087491@news02.optonline.net>
Source record: 71799

below is a copy of the text you answered along with your own.....it doesn't sound anything like what you got!

BROWNING MARK III, COMES WITH TRANSMITTER, RECEIVER, SILTRONICS 90, INTERCONNECT CABLES AND STOCK D104. THIS IS MY OWN PERSONAL RADIO THAT HAS BEEN SITTING IN A CLOSET FOR THE LAST 2 YEARS UNUSED.IT IS IN NEW CONDITION AND YOU WOULD HAVE TO LOOK VERY HARD JUST TO FIND A SCRATCH. ALL THE KNOBS AND METERS ARE LIKE NEW ALONG WITH THE FACEPLATE AND CABINETS. I PLUGGED THE ANTENNA SO I CAN TEST IT THIS BABY WAS TALKING ALL OVER,I PLUGGED IT IN AND ALL LIGHTS AND METERS ILLUMINATE. I DON'T FORESEE ANY PROBLEMS BECAUSE I HAVE NEVER EVEN TAKEN THE COVER OFF OF THIS RIG, AND IT ALWAYS WORKED FLAWLESSLY. I WOULD IMAGINE ALL THE SWITCHES WOULD HAVE TO BE CLEANED JUST FROM SITTING. THE SHOP I PURCHASED THIS FROM TWO YEARS AGO WAS WALT GOODMAN TWO WAY COMMUNICATIONS DOWN IN ALEXANDRIA,LOUISIANA WHO SELLS HAM RADIO EQUIPMENT AS WELL AS CB EQUIPMENT.THERE IS A SWITCH ON THE BACK WHICH WAS ADDED BY THE STORE WHERE THIS RADIO WAS PURCHASED.IT TURNS HE PING ON AND OFF. ALSO INCLUDED IS A SILTRONICS 90 VFO, THIS ENABLES THE RADIO TO GET ALL THE EXTRA CHANNELS. THE D104 IS THE STOCK TYPE, IT WORKS WELL WITH THIS TYPE OF TUBE RADIO. THIS RADIO IS SOLD "AS IS" THERE IS NO WAY I CAN GUARANTEE 25 YEAR OLD RADIO. THIS MARK III IS A 9.5 OUT OF 10(THERE IS NO SUCH THING AS A 10). IF YOU WANT A COLLECTOR CONDITION MARK III THIS IS THE RADIO FOR YOU. PAYMENT BY POSTAL MONEY ORDER IN ADDITION BUYER PAYS ACTUAL SHIPPING COSTS AND $15.00 HANDLING AND PACKING FEE. PLEASE DON'T WASTE TIME CAUSE THIS IS THE BEST OF ALL CB RADIO BASE STATIONS.

Well city slicker dude, you start to sound awfuly authoritive and dictatorial, almost as if you're trying to control who converses with who, and if they don't do as you say, they go in your kill file. Thats your perogative, man. But do me a favor pal, KEEP me in yours, even after I'm done with Dougie! Someone forward this to him just this once, would ya'?

Like you said "most", but not all. There are other electronics in a vehicle
than just the "computer", and factory radio equipment, such as the
electronic ignition system, and fuel injection systems etc.

Anyway you should not be even be talking to me. I'm supposed to be in
everybody's much talked about "killfile", including yours, from your last
post to me. You changed your mind again? ;-))

any
> more than you are on the writtens (70% grade passes). But...1 minute
> correct copy out of 5 minutes total = a 20% passing grade.....

If you don't pass the CW exam it makes zero difference what you did on the written exam. Each exam has to have a number of questions form different areas, such as regulations, theory, operating practices, etc. The applicant can miss all the questions, in any area, and still pass the over all exam. The same can not be said about the CW test. That is the point.

> Are you arguing that that is TOO MUCH to ask? <GRIN>

CW does not require the extra special emphasis it presently has in relation to other aspects of Amateur Radio. That's why many are questioning the need for a CW test at all.

> Code is singled out as
> worthy of testing because it is radio communication in it's MOST BASIC &
> SIMPLEST form...

Yes it is simple in form all right, primitive in fact.

> no other mode can convey information as reliably or as
> far.... pick a freq and any other mode, none can compete with CW for
gettin
> thru.

You ever hear about PSK31? I keep hearing about Hams using this mode where you can't even hear the signal in the noise, and still get near solid copy. With CW, if you can't hear it by ear, you sure are not going to be able to copy it.

> The only thing needed on the other end to translate it is a human
> brain and a pair of ears. An Italian who knows no English can still copy
> 100% of an English CW transmission... he just can't read it. Try that
with
> SSB.

So some Italian is sending CW saying somebody on his boat is having a heart attack, and asking for CPR instructions. If you don't know Italian your CW is of no use trying to help the guy, poor conditions or not. CW is of limited value when both parties don't speak the same language. I have traveled enough to other countries to know that even in person, where you can wave your hands and draw pictures, its real hard to communicate anything

at all. As far as I'm concerned CW does not make it any easier.

As you say "they were technically illegal", but now you can buy them just about anywhere, and they are now fine with the FCC too. And how many times have you heard a Ham tell a newbie to go and "read his / her (PC correct form here) study guide"? I doubt they were speaking about reading the Amateur Radio Operator's handbook.

> Admittedly, the exams are awfully easy, but com'on Leland.... didn't you
> learn something as you 'studied' for your exams?

I did not study for the exam, nor did I memorize the answers from the question pool either. I was at a Hamfest flea market, and somebody joked about me taking the Tech test. They bet me the cost of the test. If I passed they would pay for it. So I did, and they paid up. End of story.

thats where your wrong, you can have cw contacts without ever typing "language words" thats why there are standard abreviations used in all the different lanquages. qsl, qrp, qro, qrx, and so on and so on are the same in english russian or french. your commenting on something "youve heard" and not something youve experienced first hand.

I'm not arguing that fact. What I am asking is are a lot of transistors less expensive than a tube amp in the 3000 to 5000 watt level? Of course, when you get up into the tens (and higher) of kilowatts, the extra initial expense is made up in savings in electricity use as well as reliability. We aren't talking commercial use here, I hope. As I mentioned, the tube amp isn't really designed for the shock and vibration (let alone power source) for mobile use - and I hope folks aren't running several hundred watts in a mobile. The e-fields get interesting.

>Can you tell me what SAGE meant?

SAGE stood for "Semi-Automatic Ground Environment".

For those here under the age of 60, SAGE was an Air Defense
Radar and Tracking system of the 1950s era using lots of vaccum
tubes and defense budget money to make the Systems Development
Corporation very wealthy -- SDC was the "darling child" of the
Air Force in those days who had the contract for the programming
and data analysis on that system and others.

Obviously you are one of those old miserable giffers ...

Lets put the story straight here ...

Firstly, I never claimed to be a great DXer, I enjoy radio as a HOBBY,
nothing else,
I usually find most radio amateurs to be a pleasure to talk to, even if
I do make a mistake
every now and then.

Trying to copy down a BADLY sent callsign at high speeds using morse
code isn't easy,
but AT LEAST I TRIED!
I guess you are one of these miserable old sods who would prefer the
"younger generation"
to stay on the internet and not venture into radio ?
Perhaps this is why the younger generation of today feel uneasy going
on the radio ?????

I use mainly all valve equipment, homebrew antenna systems in a VERY
small garden, 10m long by
11m wide, could you do better ??? I think not!

Now, if you have nothing sensible or constructive to say then may I
suggest you book yourself in
for a sense of humour transplant, we are in the 21st centuary now, NOT
the stone age !

Regards ...

I agree, Twisty. It's TERRIBLE that CitySlicker would act so dictatorial and mean. It's SIMPLY AWFUL for you to get put in the kill file just because you broke one of the gang's rules. How UNFAIR, especially to you, a guy who has worked so hard to defend the NG from legal CB talk by being the gang's attack dog. And now this is the thanks you get?

If I were you, I'd join another gang, or maybe even start my own, like "1mangang" did.

An anonymous guy posting "10 meter radios" for sale in a CB newsgroup is actually a ham operator hoping other ham operators will respond to his ad.

Oh yeah - that makes sense.

HEhehehehe...see how you can almost stay human when you want to? If I didn't look at the name, I would never know that it came from you, Dougie. SO polite. You get what you give..so here goes. Don't know what your obsession is with one man, oh yea I do, he slapped you too...hahahah only he turned you upside down, tied you up and abused you while doing it. Thanks for the credit, but as I said, I do not lie, so alas, I cannot take credit for what you perceive as "hard work". Hard Work can be defined as the amount of time you spend with imaginary characters, hallucinated Viking stories, porn pages, web pages lifted from Fuller's book, and the total number of hours spent doing it! The only hard work I do is when I earn a paycheck, but thanks just the same. And once again. I defend no one's views but my own, but you already found out the weight of my views when you called the law and cried to them that your good name and pic was being, 'slandered", hence, your education on libel, then you come in here and try to act like you were educating someone in here on it's definition, only I didn't LET you. (sigh) Try another frame or something, atleast THAT was original, I always give credit where it's due, remember? HAHAHAHAHAH! Don't that suck?

It isnt just a matter of whose business it is. Protection of the
airwaves is a public matter. Also, I believe that any amp that works
out of the box with less than 50 watts drive and operates between 24-35
mhz is illegal. Licensed ham or not, that is the story.

You have a nice day now.

UNAUTHORIZED EQUIPMENT OFFERED FOR SALE

The Federal Communications Commission receives hundreds of complaints
about alleged illegal equipment being offered for sale on the Internet
or in publications.

If you have information about illegal or uncertified equipment being
offered for sale, the FCC will need the following information:

* An original advertisement or web address where the illegal equipment
is being advertised or offered for sale.

* If it is a web-auction we will need the name of the auction site,
the
exact item number, and auction opening and closing dates.

* Name and address of the individual or business offering the item(s)
for
sale.

* Complaintant's name and telephone number in the event follow-up is
necessary.
(Name and telephone number can be kept confidential, if requested.)

* Specifically, WHY you think the equipment is not in compliance with
FCC
rules.

* Number of pieces or types of equipment about which the allegations
are
being made (one piece, 5 pieces, how many models etc.)

Information can be e-mailed to FCCINFO@fcc.gov or mailed to:

Federal Communications Commission
Consumer Information Bureau
Consumer Complaints
445 12th Street SW

My, my, no self control here. You can't seem to resist the temptation of taking me out of the much bragged about killfile. You must really like me or something.

> thats where your wrong, you can have cw contacts without ever typing "language
> words" thats why there are standard abreviations used in all the different
> lanquages. qsl, qrp, qro, qrx, and so on and so on are the same in english
> russian or french.

OK, so what's the "standard abbreviations" (Q-code) for heart-attack when using CW, when lets say the other station was Russian, and neither station's operator knows the others language?

> your commenting on something "youve heard" and not something
> youve experienced first hand.

This subject has been well covered in the Amateur news groups. Too many CW op's admit that other than standard contact info exchange such, power - rig type - antenna -QTH, etc., CW is of very limited use, where each party in the QSO can't speak the other's language. General conversations just don't work. And as I have said before I have traveled a lot, so I do know just how difficult communications can be, even face to face, without being able to speak the others language. So if all you had was the Q-codes, you mentioned above, you could not even ask somebody where the can was to take a leak.

But Tim, it's been said in this NG many times that keyclowns don't cause the CB band any harm because they only "key" once a month and only for a few seconds at a time. This TOTALLY CONTRADICTS that statement.

As I sit here and read the spam and spew from our resident idiots
in the NG several things have become VERY APPARENT. Since
several of these robots have taken on their personal crusade it is
my opinion that unfortunately they are having an effect on what we
buy or sell. After reading the latest garbage from the FCC, it has
become apparent that business is going to have to be conducted
as it was in the good old days before the web. It looks like the web
is no longer a viable sales tool. With these creeps trolling for what
they deem to be "illegal" and reporting it, and now even a place to
report websites (not that I ever thought it was real smart to sell
certain items on the web) it looks like word of mouth is going to
be the way to go, unless you want to go under uncle charlie's
microscope. It's a real shame when you can't even discuss certain
things without some phsyco throwing in his two cents and forwarding
a copy to the FCC. Bottom line is Exports and Amps were sold before
the web and will still continue to be sold even with the phsyco-crusadsers
at work 24/7/365.
The Phoneman

That's not a "Q-code" Tim. So you're just are faking it. So don't try. I'll just ask my friend down the hall here at work, who is Russian, to check you out.

> a standard conversation is hardly needed during emergency comms.
navigational
> position and the know fact there is a emergency is the only thing
important

Yea, right. The guy needs to know how to administer CPR, or at least try, so how are you going to do that in Russian without knowing the language, in CW? Yea, the location is important all right, so the rescue squad knows where to pick up the dead body because you didn't know any Russian to tell the guys buddy how to save his live on CW.

You are going to lecture me about CW, right. Don't look like "Q-code" to me buddy. Some countries you show them that, and they will point you to a phone booth. That would be a phone number they think you were trying to communicate.

## 162. New UK Amateur Radio QRP Event for 2001

Newsgroup: rec.radio.cb
Date: 2001-02-01 22:15:43 UTC
From: pentode <pentode@ntlworld.com>
Message-ID: <Cdle6.4254$LQ2.62948@news2-win.server.ntlworld.com>
Source record: 71788
Cross-posted to: rec.radio.cb,rec.radio.shortwave,rec.radio.swap,uk.rec.radio.cb

South Normanton, Alfreton & District Amateur Radio Club
in association with the G-QRP Club, will be holding
"Junction 28 QRP Convention" on Saturday 17th March 2001
at the Village Hall Community Centre, Market Street,
South Normanton, near Alfreton in Derbyshire.
Just 5 Minutes from Junction 28 of the M1 motorway and the A38.
This will be a traditional radio event, organised in the true spirit of
amateur radio.
All under cover, there will be lots of traders with components, kits,
vintage and radio surplus, plus special interest groups and club stands.
Lectures throughout the day from Rev.George Dobbs G3RJV,
Rob Mannion G3XFD (PW Editor), Tex Swann G1TEX (also from PW)
and douglas Pitt of the N.B.T.V.A. (Not to be missed!)
Hot and cold food will be available, plus a licensed bar.
Talk-in will be provided by special event station GB0LOW on S22.
Doors opens 10.00am. Admission is just ?1.00. Free prize draw.
Further details from the organiser on 01623 465443.
We look forward to seeing you there!

Damn Dougie, you must be getting even slower with that gimped wrist. It took almost eleven minutes for you to waddle on over to Deja and back this time. HAhahahaha! I also think yer' lying again, I think ya' altered some of the text ya' printed. Her is 'yer one and only chance to prove me wrong Dougie, in your entire pathetic existence. Let's see the source in it's entirety. Now go!

>leisure time in a place other than being surrounded by stick in the mud,
>fuddy duddy have no life other than the ham shack ol' timers who think they
>know everything about radio, then you are in a dream world.

Dear Mr. "I wanna buy an illegal CB" :

1. If you are so qualified, why are you so disoriented that you have to drop into a newsgroup and ask where to purchase an "export" radio? There are sites all over the web, and there are numerous sites and sales referenced in posts to this NG, even if you read backward only 48 hours in the archives. Was it necessary to post the request that you dropped on us?

2. Why did you refer to it as an "illegal" CB? If you are outside the United States, it is very likely that the radio you wish to purchase is NOT illegal. (Hence the name "Export" radios). If you are in the United States, why in the world would you use such a term unless it was a deliberate attempt to Troll? It sure looked like bait for the ham operators. If it was, you lost. The hams didn't fall for it. The Troll Detector caught you on the very first post.

3. Okay. Protest that you're not a Troll. Then why was the second post so anti-Amateur? Your first post asked where to buy a radio. A couple of people suspected you of being a troll. Instead of clarifying your question, you launched into an attack on ham operators. If you're not a troll, can you help us understand the "contrary to ham opinion" remark?

>BTW if you can explain what 10dB over
>S9 actually means I'll buy you a beer.

When you leave the world of export radios and move into more sophisticated equipment, you will see signal strength indicators change from LEDs to analog meters. Once you are introduced to these, you will understand the above reference. Until then, I suppose you will have to use your imagination.

Meanwhile, if you REALLY wish to purchase a radio, check the resources already available. If you still need assistance, give your location so you can be referred to an organization that either is near you or which ships to your part of the world.

Yrac

true it may not be a q-code but it damn sure is recognizable in any and all languages just like a q-code. if your communist friend down the hall is a real ham or even a good freebander like myself he will surely know what it means. i wouldnt expect you to though because your neither.....

what you dont have any real ham friends to tell you? well since your a nocoder let me try this another way since you didnt know what di di dit dah dah dah di di dit was how about this?
... _ _ _ ... get the idea now? i wrote it out like you'll find in the radio shack test book(yeah yeah you didnt read the book it was just a bet, how many times have we heard that) your going to recognize that no matter what you speak or dont speak. maybe you should go pick up some of those gordon west tapes at the rat shack before you get to debating the merits of code with anybody. what you heard over in the other news group hardly makes for personal experience.

No. And I'm not Dougie.

(But go right on believing that there's only one person in the NG that's
anti-illegal CB)

UNAUTHORIZED EQUIPMENT OFFERED FOR SALE

The Federal Communications Commission receives hundreds of complaints
about alleged illegal equipment being offered for sale on the Internet
or in publications.

If you have information about illegal or uncertified equipment being
offered for sale, the FCC will need the following information:

* An original advertisement or web address where the illegal equipment
is being advertised or offered for sale.

* If it is a web-auction we will need the name of the auction site,
the
exact item number, and auction opening and closing dates.

* Name and address of the individual or business offering the item(s)
for
sale.

* Complaintant's name and telephone number in the event follow-up is
necessary.
(Name and telephone number can be kept confidential, if requested.)

* Specifically, WHY you think the equipment is not in compliance with
FCC
rules.

* Number of pieces or types of equipment about which the allegations
are
being made (one piece, 5 pieces, how many models etc.)

Information can be e-mailed to FCCINFO@fcc.gov or mailed to:

Federal Communications Commission
Consumer Information Bureau
Consumer Complaints

Izzat so?
Well, do this:
Write an email to fccinfo@fcc.gov. Complain about some made up illegal
equipment on ebay or something. You will get an auto-response pretty
quickly, then 3-5 days later you will get email like the one I posted.

You think I am playin, huh...hahahahha...dream on sissy!

HAha, can always tell when a great punch has been landed, 'ol Dougie stutters for hours after wandering aimlessly through porn hell for a few hours. Do the math. It takes him eleven minues to switch from one character to the next and make a post, the poor guy didn't even take time to desynchronize the global time at each of his addy headers (they were all the same). How long DOES it take for yer' porn filled fantasies to come on to the web Dougie? I bet you worked it all afternoon! HAhahahah! Don't that suck?

UNAUTHORIZED EQUIPMENT OFFERED FOR SALE

The Federal Communications Commission receives hundreds of complaints
about alleged illegal equipment being offered for sale on the Internet
or in publications.

If you have information about illegal or uncertified equipment being
offered for sale, the FCC will need the following information:

* An original advertisement or web address where the illegal equipment
is being advertised or offered for sale.

* If it is a web-auction we will need the name of the auction site,
the
exact item number, and auction opening and closing dates.

* Name and address of the individual or business offering the item(s)
for
sale.

* Complaintant's name and telephone number in the event follow-up is
necessary.
(Name and telephone number can be kept confidential, if requested.)

* Specifically, WHY you think the equipment is not in compliance with
FCC
rules.

* Number of pieces or types of equipment about which the allegations
are
being made (one piece, 5 pieces, how many models etc.)

Information can be e-mailed to FCCINFO@fcc.gov or mailed to:

Federal Communications Commission
Consumer Information Bureau
Consumer Complaints
445 12th Street SW
Washington, DC 20554

IARU Monitors Seek Reports on Unlicensed Operation
NEWINGTON, CT, Sep 29, 2000--In an effort to better document the extent of unlicensed operation on Amateur Radio frequencies--particularly 10 meters--the International Amateur Radio Union Region 2 Monitoring System is surveying member societies about the extent of the problem. The ARRL is soliciting reports from US hams to supplement its response to the survey.

"At the peak of the sunspot cycle, CB-like operations become more and more apparent on the highest HF band," says Brennan Price, N4QX, administrator of the ARRL Monitoring System.

ARRL HQ staffers Brennan Price, N4QX, and John Hennessee, N1KB, troll 10 meters at W1INF, keeping an ear open for possible unlicensed operators. [ARRL Photo]

Price says that on September 28 alone, the ARRL received three reports of such activity on 10 meters. "John Hennessee, N1KB, and I took turns monitoring at headquarters station W1INF and noted 12 such stations in about 15 minutes of listening time--all using AM between 28.0 and 28.1 MHz," he reports.

Hennessee, who is ARRL's Regulatory Information Specialist, says such reports occur from time to time, but increase at the top of solar cycles. "It's likely that a lot of these folks have been operating regularly but weren't being widely heard because the bands were down," he said. "The top of the cycle changes things."

In order to provide statistical backing for ARRL's survey response, Price is soliciting reception reports from amateurs for the two-week period October 1 to October 14. Observations should include date and time in UTC, frequency, mode of the transmission, language (if known), and any notes that might assist in identifying the source. Observations should also be limited to amateur frequencies, focusing on 10 and 12 meters.

Price emphasized that operations on the so-called "freeband" between 10 meters and the 11 meter Citizens' Band are not a topic of this survey.

Price urged monitors to use caution before documenting a transmission as probably unlicensed. "Most countries do not mandate a segregation of voice and digital modes, as the US does," he pointed out. "A phone transmission between 28.0 and 28.3 MHz is not necessarily illegal in the country where that transmission occurs, and if valid amateur call signs can be made out, the transmission should not be reported." Price notes, however, that lower sideband and AM transmissions between 28.0

and 28.1 MHz usually are unlicensed "and may be treated with suspicion."

Because much unlicensed operation on 10 meters is mobile, many sources can be extremely difficult to track down using direction-finding methods. However, documenting recurrent operation maximizes the chances that an intruder may be identified in the long run.

ARRL Executive Vice President David Sumner, K1ZZ, believes the best short-term solution is for amateurs to get on the air and use their frequencies. "Illegal operation on 10 meters declines on a contest weekend," Sumner says. "If that volume of stations would operate more often, perhaps these intruders would look elsewhere for an open frequency."

And he WAS a ham...just like Phoneyboy...
FCC Levies Hefty Fine on Former Amateur
NEWINGTON, CT, Mar 9, 2000--The FCC has told a former Houston, Texas, amateur that he's
liable for a $17,000 fine for unlicensed operation and for failing to allow the FCC to inspect his
radio equipment. A Notice of Apparent Liability for Forfeiture--an NAL--was sent March 3 to
Leonard D. Martin, formerly KC5WHN, by the FCC's Houston Office.
Martin has bumped heads with the FCC on several occasions in the past two years. The FCC said
it received a written complaint in May 1998 alleging that a station identifying as KC5WHN was
operating on frequencies not authorized by his Technician class license. The FCC's Riley
Hollingsworth sent Martin a Warning Notice in November 1998 outlining the complaints. In a
subsequent telephone conversation with Hollingsworth, the FCC says, Martin "generally denied
the unauthorized operation."
In February 1999, an FCC agent using mobile automatic direction finding equipment observed
voice transmissions on 27.545 and 27.535 MHz--channels allocated to the US government and
the Industrial Radio Service respectively. The FCC says the station failed to identify but
responded to the name "Leonard." The FCC agent determined that the source of the transmissions
was an antenna at Martin's residence.
The following month, the FCC monitored voice transmissions on 27.370 MHz--a CB "guard
channel." Again, the station identified with the name "Leonard." Again, the agent tracked the
source of the transmissions to Martin's residence. The agent knocked on the door, was met by
Martin, and requested to inspect Martin's radio station. Martin reportedly refused. The agent
advised Martin that operation on the 27 MHz frequencies was illegal because he had no FCC
license to operate on those frequencies, and that his refusal to allow an inspection was also a
violation.
The FCC's Houston Office issued Martin an Official Notice of Violation last April. Martin replied

by letter, acknowledging that he understood that operating on the frequencies in question was a
violation and that the FCC has full inspection authority. He also promised that "no further action
by the Commission" would be necessary to ensure his compliance with the FCC rules. In July,
Martin turned in his Amateur Radio license for cancellation. He was again warned about
unlicensed radio operation.
Martin's troubles didn't end there, however. Last October, following up on complaints of RF
interference to a telephone in Martin's neighborhood, the FCC again tracked transmissions on
27.535 MHz to Martin's residence. At the same time, the agent also observed the RF interference
on the neighbor's telephone. Later that same month, the FCC monitored voice transmissions on
27.455 MHz that were tracked to Martin's residence.
Again, the agent knocked on Martin's door and asked Martin to inspect his radio equipment.
Martin reportedly again refused, telling the agent he believed he was being "unfairly targeted for
enforcement" because many other operators also transmitted on unauthorized frequencies.
The FCC NAL said that, based on the evidence, Martin "repeatedly and willfully" violated Section
301 of the Communications Act by operating without an FCC license and by refusing to allow an
FCC inspection of his radio station.
"Martin's violations were repeated and willful, and resulted in harm in the form of electronic
interference to neighbors' home electronic equipment," the FCC said in the NAL. "Martin was
advised of these violations numerous times, both orally and in writing, by Commission
representatives and Martin indicated that he fully understood the requirements of the Act. Martin
repeated the violations after receiving these warnings." The FCC said that applying its Forfeiture
Policy Statement and statutory factors to the case, a $17,000 forfeiture is warranted.
The $17,000 fine is the third major forfeiture levied in recent months in an Amateur Radio-related
case. Martin has 30 days to pay or to request reduction or cancellation of the proposed forfeiture.

FCC ISSUES REMINDER ABOUT HF TRANSCEIVERS

The FCC has issued a friendly reminder about those HF transceivers ostensibly marketed for "amateur" use, but actually designed and intended specifically for the so-called "freeband" radio operators, who operate primarily in the 26 to 28 MHz frequency range.

In a May 13 Public Notice, the FCC points out that it's a violation of FCC regulations to import or market a transmitter designed or intended to operate outside the amateur bands unless the equipment has been issued a grant of equipment authorization for the radio services it's capable of operating. The FCC says it wanted to clarify its rules on equipment that's "intended to operate in various radio services in the high frequency radio spectrum, including '10-meter' Amateur Radio Service (ARS) equipment." The notice--directed to "manufacturers, importers, vendors and users of these transceivers"--emphasizes that transmitters intended for use by FCC-authorized radio services except the Amateur Radio Service must be type-accepted.

In the words of the Public Notice: "The Commission considers that the transceivers discussed above are intended to be operated on frequencies where the use of type-accepted equipment is required, because of the simplicity of modifying them to extend their operating frequency range."

The FCC also noted that it's illegal to import, market or operate a transmitter that requires a grant of equipment authorization but for which no grant has been issued, and that it's a violation to transmit on frequencies allocated to a licensed radio service "without the appropriate Commission-issued station license." Violators could be subject to fines or imprisonment as well as equipment seizure and forfeiture.--FCC

Florida Man Fined $20,000 in Amateur Radio-related Case
NEWINGTON, CT, Jul 15, 1999--The FCC has levied a $20,000 fine on a Florida man for violations stemming from alleged unlicensed operation on Amateur Radio frequencies. The FCC's Tampa Field Office has sent a Notice of Apparent Liability (NAL) to William Flippo of Jupiter. Flippo is accused of willful operation of an unlicensed radio station on 28.375 MHz, willful and malicious interference with ongoing Amateur Radio communications, and with failing to let FCC representatives inspect his radio equipment. All of the alleged violations are said to have occurred June 8, 1999.

The FCC's Compliance and Information Bureau has been investigating complaints from hams in the Jupiter area for nearly two years. According to the FCC, the hams identified Flippo--a CB operator known as "Rabbit Ears"--as the source of intentional interference to ham communication. One ham in the area says the local amateur community had "for many months" been experiencing deliberate interference problems on 10 meters as well as on a local 2-meter repeater, although the FCC did not cite Flippo for any violations involving 2 meters.

Local hams also provided the Commission with audio tapes and the results of close-in monitoring and direction finding, the FCC said. On the basis of the "evidence at hand," Flippo got an FCC warning last February from the Tampa Field Office, advising him of the allegations and warning that a fine could result.

The following month, Flippo "categorically" denied the allegations in the warning letter, but hams in the Jupiter area said the intentional QRMing ceased for a while.

When renewed complaints from hams arose this spring, an FCC agent traveled to Jupiter to investigate. The agent used direction-finding techniques to determine that intentional interference to amateur traffic "was occurring and that the intentional interference was being transmitted from the residence of William Flippo."

The FCC says the agent monitored and heard taped portions of a 2-meter ham radio net earlier that day being replayed on top of amateur communications on 10 meters " in an attempt to intentionally disrupt and interfere with those communications."

The FCC agent, accompanied by a local sheriff's deputy, attempted to inspect the radio equipment at Flippo's residence on June 8, but Flippo reportedly refused to allow the inspection.

Flippo has 30 days to respond to the FCC Notice, sent July 12 by FCC Tampa District Director Ralph M. Barlow.

HOW DO YA LIKE IT HOW DO YA LIKE IT!
FCC LEVIES FINES FOR UNLICENSED OPERATIONS

The FCC has fined Robert J. Powers, KB7TQA, of Puyallup, Washington, $1600 for operating on an unlicensed frequency. The action by the Compliance and Information Bureau was adopted by the Commission August 19. The fine stemmed from a violation that occurred a few months before Powers got his Technician ticket in April of 1993.

According to the FCC order, FCC agents from the Seattle Field Office discovered Powers on January 26, 1993, operating a radio station on 27.455 MHz "without authorization from the Commission." He was cited for violating Section 301 of the Communications Act. Agents used direction-finding equipment to trace the signal to Powers residence, and the FCC reports that Powers admitted to operating on the unlicensed frequency. Powers initially was fined $2000. The FCC subsequently reduced the forfeiture to $1600. Powers was ordered to pay the fine by September 22, 1997.

The FCC also cited Victor Pessaro of Melbourne, Florida, for CB radio service violations that occurred in early 1994. Following up on interference complaints, FCC agents tracked down Pessaro as he was operating on frequencies other than those authorized by FCC rules. In addition, Pessaro refused the FCC agents request to inspect his station. Consequently, the Vero Beach Field Office issued a Notice of Apparent Liability to Pessaro for $5750 for operating over the regulated power limits in the CB radio service and for failing to allow an inspection. The forfeiture was later reduced to $750, and the FCC upheld the fine in an order released August 22. Pessaro has until September 22, 1997, to pay his fine. --FCC

Well, I've seen arguments as to what class an amp is. Class C amps only conduct for 90 degrees or so - what most of the amps probably are are slightly mis-biased class B amps. Class B will conduct for 180 degrees. If it conducts for 179 degrees, some folks might call it class C, but it is truely attempting to be a class B. A true class C amp would be an awful source of RF interference if an attempt were made to use it to amplify AM or SSB signals. It would be horribly distorted. Class C could be used for FM or CW, but not AM nor SSB. Class B amps will run around 60 or 65% efficient. I personally would not use that kind of power at 10 or 11 meters (even if legal). Frankly, a judicious choice of frequency can yield far better results than simply increasing power. A buddy of mine in high school used to brag how he could talk to South Carolina on 75 meters at night (from Rochester, NY) - not a simple feat since 75 was BUSY in the evening. He ran 600 watts of high level modulation (probably the legal gallon back then). Heck, I could talk across the country with 25 or 60 watts at the same time - by using 1.8 MHz (160 meters). Of course, for him to do that would have involved a lot of time building a big wire antenna. Keywords here are 'lot of time'. Heck, in the Navy, we were approaching the Phillipeans one time and the broadcast went down. This was a large multiplex teletype encrypted circuit for communications. We were too close for skip and too far for groundwave/spacewave (not the same). The signal was weak. We simply changed the receiver to LF (low frequency, below 300 KHz) where the broadcast was also transmitted. Very solid signals - the crypto gear locked on signal and within a couple of seconds, all teletype circuits were back on line! It ain't the size of the ship, it's the motion through the ocean!

73 from Rochester, NY
Jim

To: aaronvoobner@my-deja.com

Hi Aaron,

Reporting contraband CB equipment to the FCC or getting an auction stopped on eBay is WAY better than any video game. Just log into rec.radio.cb and wait for a FOR SALE ad to come up. POW! BLAMMO! Just like shoooting clay pigeons on the range. TOO COOL!

Keep up the good work!

You have a SERIOUS MENTAL PROBLEM. I'll bet you were abused as a child.
If not it might have something to do with the fact you are so FAT and UGLY
that no woman would want anything to do with you. I'll bet you've never even
had a real piece of ass (and a man's doesn't count) in all your life. You
should go out and pay a prostitute for a good piece of ass (probably cost a
small fortune as fat and ugly as you are) and it may make a new man out of
you.
The Phoneman
PS>Seek mental help.

>From: wpbrock3rd@aol.com (WPBROCK3RD)

>this was not a Gov. Memo.

Tell you what.....Let's go check it out in person. Put your sign installations on hold until next week. Head north from Fredericksburg in the Surburban about 8 AM. I'll meet up with you about half-way to DC and we can ride together. (My vehicle ain't cool. Let's use yours!).

I'll give you a call every five minutes on Channel 6 until we meet up. (Sorry, I don't have your favorite channel on the Low side).

We should get downtown Washington in time to:
1. Find out if there really IS something called the FCC;
2. If so, did they write the memo?
3. If so, do they mean what they say? and finally,
4. Give 'em a demo of the Dave Made and ask if that's the equipment they're complaining about.

Yrac <-------who will chip in on gas for the big engine :)

## 252. Voobner Definitions...

Let's DEFINE the "Problems..
Is writing a book or website about export mods against some FCC "rule"...as Voob thinks??
Is offering for sale an FCC approved 40ch CB unmodified in any way (Galaxy DX-949) now against FCC rules?? (we type accept them but don't sell 'em?)
Is one Amateur now NOT allowed to sell his 10M amp to another Licensed Amateur??
Can one No Longer offer for sale an Unmodifed Amateur Radio??
Is it legal to advertize your Ranger or Icom rig on 1 newsgroup, but that same rig is now ILLEGAL & must be reported, just because it is mentioned on another....??
This Voob crackpot in just the last 2 weeks has been guilty of ALL of the above!! There aren't ANY "regulations" regarding any of the above..it is all legal. While some stuff is against FCC rules, & Voob finds them too, he more often than not is reporting crap that just plain is OK to do in the USA. Ham Radio Outlet & AES will & does sell Ranger & Magnum 10M rigs to anyone that pays 'em..because IT IS LEGAL TO DO so, just like Bill's 2-way, Copper & Express does,..Voob is also going to have to report EVERY Amateur dealer in the country to the FCC, for Not doing anything against FCC regs!!

## 253. Relm Mini-Com VHF 2 way radio

Source record: 71942

Voob is a typical socialist mentality. He thinks more of himself if he can get the attention of "big brother". Fact of the matter is that he's so desperate for attention that he blows stuff in that's totally legal.

Reminds me of the kid up the block who when he was 18 used to race his car up and down the street at 80MPH, but now that he has kids of his own, he yells at ya when you go past at 30MPH. Fact of the matter is that it's a 35MPH speed limit.

Yeah, he calls the cops too with the license plates and all... But, now they don't listen anymore. They had a car posted on the side road waiting for days for someone to go "speeding through the stop sign". Not a single one did...

He's just trying to get attention from big brother by pointing the finger.

I have a finger to point at voob, but I prefer to point it vertical with the back side of my hand to him. If he was Japanese I'd show him my armpit and say that he stinks, is stupid, and has no honor. If he was Italian, I'd be sure to take 3 fingers and put them on my chin while looking at him. If he was English I'd piss in his beer.

But, he's none of those, he's a "fierce nordic viking"... So, I'll just fart in his general direction and let him cut himself on his own sword.

Funny... I wasn't aware that Vikings had family crests. I'm not aware of any barbarians that took the time to make family crests. So something tells me his family's gene pool had crested a long time ago. Must've been that fierce lack of light during the dark ages causing a Vitamin D deficiency. Which probably explains why the voobner skin is so thin. Not good for that northerly cold climate. Probably why they moved to the states.

I was better, but I got over it.

You didn't read my FAQ closely. Here it is again.
---

VOOBNER FAQ

-Who is Aaron Voobner?

Aaron is a guy who responds to the supporters of illegal CB, many of
whom dominate the rec.radio.cb newsgroup and otherwise attempt to
intimidate proponents of legal CB operation.

-Are you a real guy?

Yes, Aaron is a real guy and his name really is Aaron H. Voobner.
Despite being the subject of a *desperate* search by illegal CB'ers in
the USA, his personal information remains readily available on several
legitimate databases.

-Is Aaron Voobner N8WWM?

No. I don't use profanity and I don't post porno.

-Why do you hate illegal/outlaw CBers?

Their big amps screw up the CB band for other users. Thier stealing
channels from government and hams is just plain dishonest. Plus, their
antics draw heat from authorities onto legitimate CB users.

- So why don't you just make your point and then go away? You're being
"rude" to illegals by contantly poking your nose where it doesn't
belong.

Reason #1. I don't respect people who have no respect for anyone else.

A new breed of "outlaw" CBer came along recently: folks with no respect
for any one or any law. Folks who think they have a "right" to operate
illegal CB and not be criticized for it. These "anything goes" people
took over the CB band from the fine folks who were there for decades,

and in many cases forced them off the air. These are the same idiots who post amp and freeband crap in the newsgroup and are rude to anybody who disagrees withe them.

Reason #2. Idiots need to be told they are idiots, until they stop being idiots.

The reason there are 5,000 watt amps on your local CB channels is because people tolerate it. No one dares complain. Everyone minds their own business. No one wants to get involved. The idiots get "respect" -- so they proliferate.

- But you're just riling up the illegals and making them angry. That's not being a responsible person.

There is nothing responsible about operating illegally. Illegal CB operation is done irrespective of FCC Part 95 and it's intended purpose. Loudmouthed, irresponsible individuals who promote illegal CB operation deserve little, if any respect from legal CBers. They give legal CBers a bad name in the eyes of the public.

-You're driving CBers away from the amateur radio hobby by making them hate hams.

I am not making anyone "hate hams" because I am not a ham myself. And it is doubtful that CBers who openly despise the FCC, flaunt rules, and have no consideration for other radio ops would be good "potential hams".

-You can't stop people from posting. It's perfectly legal to talk about illegal CB.

I don't try to stop anyone from posting. Talking about illegal CB is protected under the US Constitution under Freedom Of Speech. However, my criticism of illegal CB is also protected. You don't like it, don't read it.

-But you accuse innocent people of operating illegally.

I don't "accuse" anyone. I ask questions. And in any case, I have no authority to arrest or prosecute anyone, so why be so paranoid?

-But it's slander.

You mean libel. Slander is spoken. Libel is written. I hardly think it's "libelous" to ask someone who just finished bragging about "dropping the maul" or "calling CQ on 555" if they are an illegal CB'er.

But if you think you have a case against me, you are welcome to pursue it. Your attorney will quickly tell you that you can't sue someone who calls you an idiot or disagrees with you in a Usenet newsgroup.

-So why don't you go to a CB coffee break and harass people?

I reserve the right to choose my own methods, thank you. I also express my opinions to legislators, auction sites, equipment manufacturers, amateur radio organizations, law enforcement agencies and public officials.

-Are you a wanna-be RF cop?

Nope. If I was, I'd be in here harassing people about antenna height and the 150 mile limit. That's Barney Fife, not me. It's not RULES I'm concerned with. It's illegal CBers BEHAVIOR. It's inconsiderate behavior of selfish idiots - who just happen to be breaking FCC rules.

- But illegal CBers are just bending the law. Like the Minutemen of the Revolutionary War. Or Rosa Parks during the Civil Rights protests.

Give me a break. There's nothing NOBLE about stealing frequencies that do not belong to you or locking up your local channels with a 1KW amp.

If you truly wanted to effect legislative change, you'd do it within the system.

-Are you a flamer?

No, but if I'm flamed, sometimes I'll flame back. Depends.

-But you're screwing up the newsgroup.

I'm sorry, but this newsgroup was screwed up LONG before I ever came. And if my opinions about legal CB "screw you up", then you have bigger problems than me.

-Can't you realize that your anti-illegal CB postings are useless?

Perhaps. And perhaps not. It is hoped that continued criticism of and opposition to illegal CB practices (such as "keydowns", CB amps, etc.) offends the self-proclaimed illegals to the degree that most of them will eventually get tired of the newsgroup and go away. That will open up rec.radio.cb for discussing the topic it was intended for: CB radio.

He's a paranoid delusional lonely individual who doesn't understand why the other kids won't play with him. Fact of the matter is that Voobner will tell the store that you shoplifted that free sample of the new product. That's why the other kids don't play with lil ole Voobner.

>
> -Are you a real guy?
>
> Yes, Aaron is a real guy and his name really is Aaron H. Voobner.
> Despite being the subject of a *desperate* search by illegal CB'ers in

"Legitimate" databases... You'll notice the paranoia and delusional signs keep coming out.

>
> -Is Aaron Voobner N8WWM?
>
> No. I don't use profanity and I don't post porno.

No no no... I believe he isn't N8WWM... This part I think is actually true... But the question really is "How many Voobners are in Aaron's head along with him?" That's the question. He's a one man "organization"... He hasn't started referring to himself in 3rd party form YET, but I wouldn't be surprised.

>
> -Why do you hate illegal/outlaw CBers?
>
> Their big amps screw up the CB band for other users. Thier stealing

> channels from government and hams is just plain dishonest. Plus, their
> antics draw heat from authorities onto legitimate CB users.

And they keep calling him a mud duck. Which hurts his self esteem. I bet that he pissed someone off on the radio in his local area, and now he can't talk no more, that's why he's here in this newsgroup. Because when he gets on the radio I bet about 90% of the locals stomp on him. If it was up to voobner he'd try to pass a law to make all derogitory and inflamatory statements that hurt self esteem against the law.

>
> - So why don't you just make your point and then go away? You're being

So Aaron here decides to accuse people of being criminals. Anyone who comments about his comments practically. Funny, he never responds to my posts... I can't wait for the FCC to show up and inspect my 4 Watt 70cm packet radio setup...

>
> A new breed of "outlaw" CBer came along recently: folks with no respect

> who disagrees withe them.

"A new breed".... As opposed to what? The old breed? I think that you are confusing skip activity and the subsequent increase in the noise floor for the "actions" of this "new breed". It's an 11 year cycle, it comes and goes. Just like you... But I'm not going to wait for the corona to stabilize before I point this fact out to you.

>
> Reason #2. Idiots need to be told they are idiots, until they stop

You're an idiot.... I rest my case....

>
> The reason there are 5,000 watt amps on your local CB channels is
> because people tolerate it. No one dares complain. Everyone minds
> their own business. No one wants to get involved. The idiots get
> "respect" -- so they proliferate.

The reason there are 5000Watt amps on *>OUR<* (meaning world) FREQUENCIES (channels... Uggh)... is because they were made, and are being made, and are perfectly legal on 10Meters. Some people decide to use them on CB. I agree, this is illegal, and there is no reason to run 5000 Watts on CB. I

can see perhaps an increase to 10 Watts during the sunspot cycle, but you'd have to do it on an honor system.

>
> - But you're just riling up the illegals and making them angry. That's

> Loudmouthed, irresponsible individuals who promote illegal CB operation
> deserve little, if any respect from legal CBers. They give legal CBers a
> bad name in the eyes of the public.

There is nothing responsible about accusing someone of being a criminal here in the newsgroup when you have no evidence other than them mentioning they have a ham rig. You've done this countless times, and it's simply amazing. If I told you I had a bullet you'd instantly accuse me not only of owning a gun, but brandishing it in public taking pot shots at moving traffic. Then I'd have to say, well yes it's a bullet from the 1600's, and I found it in the ground just outside of Fort Niagara along with an Indian Arrow head. Then you'd accuse me of having a bow and arrow and hunting out of season. You're ASStounding Aaron... Your paranoia and delusions are an excellent break from reality. You're a one man "organization" out on a crusade to find the holy grail. Just uh, where'd you get the coconuts? (Monty Python)

>
> -You're driving CBers away from the amateur radio hobby by making them
> hate hams.

Really? Uhhhhh... I'm a ham, and I dislike you.

>
> I am not making anyone "hate hams" because I am not a ham myself. And
> it is doubtful that CBers who openly despise the FCC, flaunt rules, and
> have no consideration for other radio ops would be good "potential
> hams".

You're making everyone dislike you immensely more and more every day. Except for me of course. I find you an interesting specimen. You're an interesting breed of "sheeple" you are. You seem to have a need to be led by countless laws and baaaah at other sheep not with the flock. So what happened? Been nipped at the hoof too many times by the sheep dog? Or just plain afraid of him, so you feel a need to gain his trust? (sheep dog being big brother)

>
> -You can't stop people from posting. It's perfectly legal to talk about
> illegal CB.

Yes, and thank god it's perfectly legal for me to analyze you... Did you ever contact your county health organization about how strongly you "feel" about this matter?

>
> I don't try to stop anyone from posting. Talking about illegal CB is
> protected under the US Constitution under Freedom Of Speech. However,

I could brag that I ate 500 McDonalds cheeseburgers at one sitting in 15 minutes. It doesn't make it true, and although gluttony doesn't make me a sinner. Only a liar. But then heck, SCD has proven you a liar. I'm not going to take the time to troll through old posts and bring it up again.

>
> But if you think you have a case against me, you are welcome to pursue
> it. Your attorney will quickly tell you that you can't sue someone who
> calls you an idiot or disagrees with you in a Usenet newsgroup.

Yep... This is true... But you're still a paranoid delusional idiot. (IMHO)

>
> -So why don't you go to a CB coffee break and harass people?

And there's nothing noble about spamming a newsgroup with useless clutter
when if you were really concerned about it you'd go out on a fox hunt with a
directional antenna and pinpoint the REAL offender and blow them in. Your
efforts *>HERE<* serve only to bring attention to lil ole lonely Voobner.

>
> If you truly wanted to effect legislative change, you'd do it within the
> system.

Exactly... Or do the above... Eliminate the local offenders, and noone
will be "locking up" your local channels.

>
> -Are you a flamer?
>
> No, but if I'm flamed, sometimes I'll flame back. Depends.

I don't think that's what they were asking you.... You got that question in
E-Mail I guess...

>
> -But you're screwing up the newsgroup.
>
> I'm sorry, but this newsgroup was screwed up LONG before I ever came.

Then maybe insted of whining about the CW test, you oughta' argue for
stricter testing on the written. If you want HF, you do code.... don't
whine, just do it

Heard a fella today, moanin' about code... went on and on about a 'rocket
scientist' freind of his that would've been such an asset to Ham Radio if he
just didn't have to pass that stupid code test (the guy was supposedly an
electronics & radio engineer). Funny how the guy wouldn't be interested in
VHF/UHF/Microwaves... isn't that where most of the real ACTION is in
technology.... I don't see anyone standing in line or bidding for HF
frequencies.

Sorry.... I don't feel your pain, bud.... As a VE I've seen too many blind,
hard of hearing, retarded (yes... retarded), & cerebral palsy patients pass
code exams to feel pity for those who want HF for free.

Want it for free.... Bootleg. or get on down the road.

> You ever hear about PSK31? I keep hearing about Hams using this mode where
> you can't even hear the signal in the noise, and still get near solid
copy.
> With CW, if you can't hear it by ear, you sure are not going to be able to
> copy it.

PSK31.... wait a minute..... solid copy.... YOU? NOT HARDLY.... the MACHINE
gets the solid copy! So now you have to have a computer in order to read
the message.......... see below.

> > The only thing needed on the other end to translate CW is a human
> > brain and a pair of ears.

You still waitin' to upgrade? ....or was that tech license the end for you.

PSK31 is hardly simple or basic.... requires adding a computer, soundcard, software, and interface... CW requires none of these.... just your brain and ears and a radio.

Dear Mr. Wirewrap

I 'dropped' into a CB group because I was aware that the freeband users are more aligned to CB than Amateur users. (Isn't it funny that the term 'ham' is used more than 'Amateur'). I really didn't expect hostile hams to be sitting in wait for unsuspecting NG visitors. You know what annoys me most....the hams jumped without knowing where I was...whether or not my 'intended' activity was legal in ZL....and most of all, I haven't even done anything. Now to go on, you are correct there are literally dozens of sites on the web...but generally a related NG is where you learn which sites are not too reliable especially when exporting...you get my drift. That's why I asked the question here. Why call it illegal rather than export...well isn't it??? I did use quotation marks around the word "illegal" in my first post...No it wasn't bait, it was an honest question and NO you lose...the Amateurs did bite...care to browse my Inbox? Finally, you ask why my second post was so anti-ham...I think I already covered that....I didn't expect the smart ass ham initiated cracks about my 10+ QRM so I bit back. Now for the dick waving contest.....my buy a beer challenge was to the Goober to explain what 10 over 9 meant...in technical terms...he hasn't or couldn't so I keep my beer and his label GOOBER the AMATEUR stands. BTW you wouldn't know what sophisticated equipment was if you fell over it. Go have a look at the range of Watkins Johnson radios that I play with then tell me your TS or FT blah stacks up....grrr

Hi folks;
I am looking for a radio tech in the san francisco bay area who can tune and align a saturn turbo and a 148f. does anyone know of someone? The saturn is a great radio, but splatters like crazy. The 148f is cool also but has a weak recieve. I need some proffesional help with these two radios. Thanks in advance for any help you can give.

Sounds as if someone cut the limiters. Until you find a tech, don't use power mikes. Use a stock mike and keep the audio level high enough to get through but not TOO high. And turn off the Roger Beep. Otherwise, you will annoy people on nearby channels.

No sense risking a pin in the coax.

QRM

That is correct. That was the sole point of the example, for you to prove your point. I had asked you specifically to produce them for the example situation, and you failed the test. The rest of your post is just making excuses to cover up shooting off your mouth before thinking first.

> ever attemtping a joke.

Joke? More like you shot your mouth off, about the Q-codes, before you realized you said something stupid. Now your doing a little side ways dance, hoping nobody notices your mistake, while making excuses, and trying to draw attention away from the situation. The joke is on you Tim.

Besides you really like me. You keep taking me out of your kill file. I rub your fur the wrong way, get you to say something dumb, and you stick me back in the old kill file. Then like an alcoholic you can't help yourself, so you come back for more by taking me out of the old kill file again. I have lost count how many times you bragged about putting me in the fill file. Every time you mention "kill file" I have to laugh. 8-))

Oh yeah, That copyright notice at the bottom of your web page draws a lot of laughs from the people whom I showed it too. They get a kick out somebody who has not respect for the law, then on the flipside , tries to protect their web side by using the law. The same logic, you use for to justify your pirate operations, is the same that lets people rip off the photos from your web side, to humiliate you after doctoring them up.

Source record: 71983

NOTE: The following is a response to City Slicker which got out of place due to my computer doing the "Illegal Operation and will be shut down" thingy, so I just put it where I could.

The key word is "sometimes". Most of the time the amp is idle and I do fine with 100 watts. If I can establish and maintain contact with a minimum of power, then that's what I do and that is the accepted standard in Amateur, as well as, professional and military communications. If the noise is high, and it is not feasible to switch to another frequency, then I *may* use a higher lever of power up to 650 watts. The difference is, the amp is not used to key OVER somebody, it is only used to make commmunications possible in difficult conditions. Amps, in and of themselves, are not necessarily bad. It is HOW they are used that counts. It is for that reason that the Amateur Service is *allowed* to have amps of certain power since they are *supposed* to "know" how and when to use them. Unfortunately, that is not always the case, nor is it the case with CB. Some people feel the need to be King of the Hill, so..... Even amps *can* be used responsibly. In my case, I don't really care if I get keyed over. What does it prove? Your amp is bigger than mine by virture of your spending more money than I did?. So? I "care" so much about amps, I'd sell mine tomorrow for WHOOOOPS! I wasn't supposed to say that, was I!? LMAO! ROTFLMAO! Now I'll have Voobner all over me! SHHHHHHH! Don't tell 'im. Oh, too late. I hear that "private eye" music starting faintly in the background. ARRRRGH! There's a '56 Chevy sedan pulling up in front. AAAAAHHHHHH! He's here! Fedora pulled low over one eye, cigarette dangling carelessly on one side, hands in trenchcoat pockets. GASP! The music's getting louder--he just flipped his cigarette into the grass, and he's saunterin' up my walkway! Twistedhed, Cold as Ice, Timnebo, CitySlicker--HALP!!!!!!!!!

That's been done, and all of the CW die-hards come out of the wood work bitching the tests would be to hard.

> VHF/UHF/Microwaves... isn't that where most of the real ACTION is in
> technology.... I don't see anyone standing in line or bidding for HF
> frequencies.

Now you know why I'm in no hurry to get on H.F. When the sun spots are up a wet noodle stuff in the antenna socket would work DX on H.F. No challenge there. That's why V/UHF is so much fun, because it's not easy, like H.F.

> Sorry.... I don't feel your pain, bud....

I'm not twisting your arm.

> As a VE I've seen too many blind,
> hard of hearing, retarded (yes... retarded), & cerebral palsy patients
pass
> code exams to feel pity for those who want HF for free.

Still have to pass the written exams. As you pointed out the exams are too easy. Well lets make them equivelent to an engineering level exam. No open question pools too. That should fix it. You going to whine about the exams being to tuff now, like the other pro-coders? You want to get on H.F. for free by dumbing down the exams. It's fun to watch the pro-code group bitch about NOT making the exams harder. They want their cake and eat it too. Your logic cuts both ways.

> Want it for free.... Bootleg.

Well that's what people like Tim are doing. He can't pass the exams.

> You still waitin' to upgrade?

No.

> ....or was that tech license the end for you.

For the type of operations I'm interested in the Tech license provides everything I need. Your mistake, like every other idiot who tries to poke fun at the Tech license, is you ASSUME everyone wants to get on H.F. Knock -

knock, hello, anybody home? This may be news to you but not everyone cares to operate on H.F. I am willing to bet this is not the first time you have been told this by somebody either.

So when CW can't get through you use PSK31. So much for CW being the mode of
choice when nothing else can get through argument.

I would like to see you copy high speed CW meteor scatter. Try doing that by
ear at 2K characters per second. Good luck.

The ad is an "obvious" forgery.

But, pursue it if you feel forgery and impersonation is justified. And don't forget you'll have to use YOUR real name and address when corresponding with the FCC during the follow-up investigation.

Dream on, Leland.... the ONLY ones I hear bitchin' (and I ain't alone) are
the ones tha want the Code exams ended... there's plenty of COMMERCIAL
interests pitchin' for NO or less exams. If you'd bother to research WHO
was behind pushing restructuring (and lowering of test standards), you'll
find lots of Corporations and $$.

Painfully obvious here that you don't have much (or any) experience on HF.
But... if DXing on V/UHF is your bag, go for it!!! That's what the hobby is
about. I do both, but gotta' admit I don't chase DX... couldn't care less.
Don't get me wrong, I'll try to work a 'new one' if I hear him, but I'm
usually just looking for a ragchew.

I totally agree Steve. Complain your asses off to AOL. When the person forging my name gets slapped by them, it will prove that the many false posts are not me, as I will still be here. So will my AOL account and web page. They are just pathetically reaching<Dweebo and twistie> for ways to make it seem that they are me. Dweebo has already been slapped twice by AOL, so lets just see what happens next.
REPEATING: THE REAL N8 ENCOURAGES ALL BITCHING POSSIBLE ABOUT ANYONE WHO IS AN AOL USER THAT IS FORGING MY NAME. N8WWM@my-deja.com is Dweebo.

I totally agree Steve. Complain your asses off to AOL. When the person forging my name gets slapped by them, it will prove that the many false posts are not me, as I will still be here. So will my AOL account and web page. They are just pathetically reaching<Dweebo and twistie> for ways to make it seem that they are me. Dweebo has already been slapped twice by AOL, so lets just see what happens next.
REPEATING: THE REAL N8 ENCOURAGES ALL BITCHING POSSIBLE ABOUT ANYONE WHO IS AN AOL USER THAT IS FORGING MY NAME. N8WWM@my-deja.com is Dweebo.

Well, I do not know about anything from Riley...but hey there twistie...ya still say I am lying about the mail I got? That is your standard and pathetic defense. You shuld wear a blue suit and a cape with a big "D" on the front. You could be a superhero called "DENIALDUDE" to all the other ILLEGAL FAGGOT KEYCLOWNZ.
By the way, in another post you said I "deserved" such treatment, etc. Thank you. When a group of criminals treat you badly, it makes you understand even more clearly why you are on the side you are on. You and your ilk prove the rightness of my position daily. Again, thank you.

> Dream on, Leland.... the ONLY ones I hear

Go to "rec.radio.amateur.policy" and suggest making the exams harder. Then watch how may General Class ticket holders and up start whining about the tests don't need to be harder. I don't see any "corporations" posting anything. You can also search for past posts along those lines too. It will take you weeks to read them all. I'm not dreaming, I have already been there, done that, and I'm disgusted with the attitude that code tests have to remain, but the written exams, that a 10 year old can pass by memorization, are already hard enough, may even too hard. Yeah, I'm dreaming all right, about the day when the written exams are so hard you get the shakes, and break out in a cold sweat, just thinking about it.

> ...and now you stoop to calling me an idiot?...

Nope. Not intentionally anyway if that's how it sounded. I suggest you go back and read "very carefully" what I wrote again.

> think I hear my kill file opening)

What? Me worry? I hear that from Tim all the time, but he still comes back for more anyway. I guess he can't help himself.

I don't see anything in the Constitution about an inalienable right to
market illegal CB gear. I'm going to put my resources to work on
getting this site busted.

There's some pictures of amps on this page, they're owned by a buddy
of mine and he my be interested in selling them. The small silver
mobile one does 135W dead key and the base AC unit does 250W dead
key, both with 4W input and reading it on a tight meter that's in my
Ameritron AT-15 tuner into a perfect match.
What are they worth these days?

Judging by the discoloration on the heatsink (in the top pic) that sucker
has been HOT!
Nothing wrong with that as long as it still works. About $50

## 343. FS: Grant XL and Palomar 250 Elite amp

Newsgroup: rec.radio.cb
Date: 2001-02-02 21:28:37 UTC
From: ponchopwr1@aol.common
Message-ID: <20010202162837.06217.00000428@ng-fr1.aol.com>
Source record: 72023

I have a Uniden Grant XL and a Palomar 250 Elite amp for sale. The Grant has been tuned to do 17 watts. No x-tra channels but can have it done for a little extra. The Palomar 250 Elite has been upgraded with 8 ga. wire. Radio is about a 8 and the amp is about a 9 on a 1-10 scale. Asking $275.00 for both. May sepparate. Thankyou.

I have no problem at all corresponding with the FCC. Done it many of times...let's see, last document recieved was from the Tampa field office, it was signed by a real person with a real name, provided everything I asked, and came by US mail to my address, and was much more recent than anything you provided. I have never received a correspondence from the FEDS unsigned..and neither have you.

Yes it is. Particularly when I show that picture of you, around the office here, giving that guy, in the stretch top, a big hug around the waist. Even blown and used as Windows wall paper it still looks real. Some here really think it is too. Hard to persuade them otherwise when you have that liquor bottle hanging out of your hand there. Is it true they look better the more you drink? You don't have to answer if you don't want to. I understand how you would want to keep things like that private. 8-))

Lol, Jer! You didn't finish the story......

Pick the one you like best.

After sauntering up your walkway he:

A) Knocked on your door to ask if you wanted to buy a 16 pill.

B) Knocked on your door and asked you if you would sell a 16 pill.

C) Peaked in your window, saw your ham license, and made a hasty retreat.

D) Asked if you knew, saw, or heard anything suspicious, such as sinister characters who may be planning to take over the world with 16 pills, or guys dressed funny running around looking to rid the world of 16 pills.

E) Asked if you ever heard of the "Mason" shoe.

F) Realized he had the wrong house. We knew that all along, didn't we?

Mmmmmm-mister private eye,

Wwwww-would it make you feel better if I told you I have NEVER sold an amp to ANYBODY? I mean, come on, it jjjjj-just slipped out! I-I-I-I caught myself before I said it, dddddd-didn't I? I-I-I-I ddddd-didn't know you were in the neighborhood. I mean, I DID see the dark Chevy sedan with all the antennas on the trunk, bbbbbb-but I din' know it was you. LMAO!

Aaron, we agree on the illegal stuff. What we DON'T agree on is the effectiveness of your posts. C'mon, man, these guys are gonna do what they're gonna do. I don't use CB linears, I don't OWN one! What I have is an Amateur 12V 80-10 meter amp that I built up myself. Hams are allowed to do that, remember? It takes at least 65 watts to even key the thing--full output is at 100 watt input. I drive it with an Icom 706 MKIIG which has an internal CR582 Hi Stability oscillator from the factory. I have to have that to meet NTIA/USAF standards for certain frequencies I am licensed for. SO! My amp is only there for contingency, not for "keying down".

I was having fun pulling your chain with the amp sale thing-wanted to see what you'd come up with.

Jerry

# 359. FS: President HR-2510 Tranceiever w/Chipswitch

Newsgroup: rec.radio.cb
Date: 2001-02-02 22:26:41 UTC
From: Paul <pvanasse@mail.direcpc.com>
Message-ID: <TGGe6.11936$ad2.249639@news.direcpc.com>
Source record: 72039
Cross-posted to: alt.ham-radio.marketplace,rec.radio.amateur.equipment,rec.radio.cb,rec.radio.swap

President HR-2510 AM, FM, CW, LSB, and USB Tranceiver with Chipswitch installed. This radio receives and transmits perfectly however the main VFO knob only allows for increase of frequency. The stock mic UP/DOWN buttons work perfectly as does the UP/DOWN buttons on the front of the radio. This radio was in a box and worked perfectly upon being stored. Apparently it was jostled which resulted in some loss of connection with a portion of the main VFO selector. Also, this radio has a bracket for another smaller radio mounted on the top, and the whole case appears to be repainted. It fires up fine and TX/RX is perfect. Guarnteed not DOA. Good project for a tech familiar with the 2510.

$120 plus shipping.

Please email for any additional info.

Thanks and 73

## 360. Re: Advice Needed

Newsgroup: rec.radio.cb

Mr. Vincent,

The "Goober", "Goobner", Voobner, etc. is NOT a ham. He is a wannabe!
That's why I oppose him. He attempts to "speak" for others, including
hams, thus bringing down wrath upon those of us who are innocent.

Jerry

Well,

In order to "impress" the "illegals", you need to come up with more re-
cent material! First off, I am not a "keyclown". I don't DO that, OK?
Second, I resent the inference. I am no more in favor of illegal oper-
ations than you "seem" to be. I get just as mad when I hear truckers,
and roger beeps on 28.085 as anybody. What I DON'T do is come in here
trying to threaten, harass, harangue, aggravate, or otherwise stir up
useless arguments that do more harm to Amateur Radio than good. I also
resent those who claim to "represent" ham radio and cause more ill will
against my own favorite hobby. The whole thing just deteriorates into
childish flames, profanity, and immature insults. It accomplishes no-
thing!

Before you call people "dweebs" you need to know more about the person
you are insulting. You don't KNOW what you are talking about.`

Hi Andy,

>Phil! Got any sites where I can see the class D TX operation?

If you want to find some info you could do worse than search on: AM broadcast transmitters

But you maybe limited in what you'll find other than tx specs rather than circuit design and theory.

Best to look in some ham books for design principles.

I've mentioned Fritz Raab's work on class-E pa's before.

Search on class-e and his work will come up including the article 700w cw on 160m for under 10 dollars!

Good luck.

Phil / UK

## 370. Re: President HR-2510 Transceiver w/Chipswitch

Newsgroup: rec.radio.cb
Date: 2001-02-03 00:51:12 UTC
From: Paul <pvanasse@mail.direcpc.com>
Message-ID: <IQIe6.11951$ad2.250446@news.direcpc.com>
Source record: 72051
Cross-posted to: alt.ham-radio.marketplace,rec.radio.amateur.equipment,rec.radio.cb,rec.radio.swap

President HR-2510 AM, FM, CW, LSB, and USB Tranceiver with Chipswitch installed. This radio receives and transmits perfectly however the main VFO knob only allows for increase of frequency. The stock mic UP/DOWN buttons work perfectly as does the UP/DOWN buttons on the front of the radio. This radio was in a box and worked perfectly upon being stored. Apparently it was jostled which resulted in some loss of connection with a portion of the main VFO selector. Also, this radio has a bracket for another smaller radio mounted on the top, and the whole case appears to be repainted. It fires up fine and TX/RX is perfect. Guaranteed not DOA. Good project for a tech familiar with the 2510.

$120 plus shipping.

Please email for any additional info.

Thanks and 73

Karl,
You've hit on what really strikes me as spooky about Aaron. It really isn't a healthy, normal thing to become so damned transfixed about CB radio. My God, aren't there some genuinely pressing social causes that a guy with this much fervor could do some real good, instead of ranting over abuses on some currently marginally usable band? By sheer virtue of numbers, there will never be wide open spaces on 11M, even without amps,etc.. Hell,19 creates it's OWN hetrodyne when everything else is dead. What triggered this crusade? Who knows. The little Italian kid I mentioned in my previous message to Aaron, the one who tried to be a cop and ended up moving to Washington? He did end up pretending to be a cop, but the spooky part is that when he played cop along with his cousin Angelo Buono, Kenny (Bianchi) made some headlines of his own.

I would suggest that one more question be added to the FAQ: Is Aaron legitimately what he says he is, or is he simply rattling our collective cages? If the former, start putting locks on all the stairwells to University clock towers in his area; if the latter, I have to congratulate him on being one of the most creative SOB's I have ever seen...it has to be one of the best ballbusts I have ever seen. He has singlehandedly raised the Maalox and Rolaid stocks several points!!! It takes a lot of work to keep this up so well, for so long.

Oh BTW, try the area about 100yds straight out from the sallyport for roundball and trade beads, just don't let Dunegan see you!!! ;>)

Bill

The little Palomar 12VDC amp should be about $50 or so, if one were to look around on the web one could find very similar 225W versions with the same pedigree new for under $100.

The AC unit is similar to one I had go through my shack years ago, came and went pretty quickly as it was of very marginal construction, had some switching problems that kept recurring, the transformer was generally inadequate for what it was trying to do, and therefore passed along this failing in the signal quality. (And it was only the 200W version.) If you are looking for something to use, as I surmise by the callsign, on 10, save up a few sheckles and go with something using one or more 3-500Z's, tougher than hell, able to excite with well under 100W and are usually built a lot better than the barn jobs that are out there.

Andrew, unfortunately you dropped into the newsgroup in the middle of a flame war which has been going on for several weeks. I would ask you (as well as all amateurs and CBers) not to judge all of the 'other' group (whatever that means since we all are, apparently, communication enthusiasts). Other than that, read some of the posts. Some are silly, some are boardering on obscene (in both directions) and some are pornographic (DON'T click on any URLs if you wish not to be offended). A lot of folks have their panties in a bunch, so to speak. As far as 10 over 9, as you undoubtedly know, there is a 'standard' which is, essentially, meaningless. Meaningless, since you would need a calibrated antenna over known ground conditions (aka OATS, open air test site) as well as a calibrated receiver. BTW, I have used Rohde & Schwarz receivers both in open air test sites and inside an anechoic chamber. The nice thing is, however, that you can put a couple of pre-amps on the radio, turn all the pots, and tell the guy he's 20 over 9, uh, but I missed your 20. Ummm... could you repeat? Of course, disconnect the antenna and the meter still reads S-7!

73 from Rochester, NY

My amp is an Ameritron 811H, four 811A tubes! It does all I need and
it's driven by an Icom IC-846. :-)
These amps belong to someone who asked me to research them for him
with an eye towards selling them. I don't have a lot of time to mess
with them so I asked here. (cheating)

Thanks.

well well Mr. voobner Have you finally saw the light ? You are now selling all your illegal equipment, or do you still have more in the closet?.. I will send this post to Riley since that would be the correct thing to do and you have made me an advocate of legal operation. So in an effort to help clean up the band I will take you as my first example to Riley Hollingsworth, I am glad you have convinced me and you are offering yourself as a sacrificial lamb to the NG. I will provide my name and telephone number to the FCC if it helps TO keep you from selling AN AMP. I mean afterall you should be proud of me Look I am just doing what you taught me and I will include all know e-mail and IP addresses for you since you do post from so many. I want to give them all the help I can You know Kinda like your doing. Well Thanks Again Aaron, Remember you Reap what you Sow ....

From "Aaron Voobner FAQ":

-You're driving CBers away from the amateur radio hobby by making them
hate hams.

I am not making anyone "hate hams" because I am not a ham myself. And
it is doubtful that CBers who openly despise the FCC, flaunt rules, and
have no consideration for other radio ops would be good "potential
hams".

Bill, having long since killfiled the good Mr. Scott I apologize in advance for getting in this way.

You are pissing up a rope -- which is certainly your privilege -- with these yoyos. There is one on another group that has been carrying this on for 11 years! I don't know how, I don't know why but they have gotten themselves in an emotional tangle over what is at best a two week process of learning the code. Whether they ever intend to use it is totally irrelevant; every license in the world requires learning stuff you never will use. The Nebraska Property/Casualty license requires knowledge of blue water marine a kilomile from the ocean; you still take the Class B CDL with air brake and probably hazmat if all you intend to drive is a garbage truck. You want it, you do it -- end of story.

They get this vision of old Extra CW diehards administering initiation rituals at secret Wouff Houng ceremonies keeping the worthy like themselves off of HF and treat it as if it were revealed truth. They actually believe that the opinions of the ARRL mean a damned thing. So we get overuse of the word 'should' and rending of garments/gnashing of teeth over this conspiracy to deprive them of the ancient rights of Englishmen. In short, a juvenile tantrum attempting to sell someone who cannot possibly do them any good. Unless these people are insane, Bill, you do not fit into the picture at all. Your purpose is to be a sounding board while they convince themselves that it is not their inertia that keeps

them from success.

When I find a cat is using me for a scratching post, I find it is generally easier to strangle the cat. Use your own judgment.

Dick N&#65533;BK

Source record: 72075

>What radio is the better radio and why???

The 2950 has programable channels. The
2510 requires a chipswitch to do this. The
2950 has been known to be problematic. 2510s have their problems. Do like me
and get both! For Mobile use, the 2950 is superior. For base the 2510 is a
solid unit where controls are not an issue.

Hi qrm;
Hey thanks for the reply. I have not been using the saturn. I don't want to piss off the neighbors. It's possible the limiters were cut. Thats why i'd like to find a tech in my area that could find out for sure and fix the thing for me. This radio has a lot more power than it should have; even with the common mods. I mean, it has a TON of power! even with the mike turned ALL the way down and power set at 5-10 watts; it messes up the t.v's and stereos in the house. I can hear it through the stereo speakers with the stereo turned off! Never had that problem before. I've had quite a few radios over the years; some tuned up; some not. But never had a rfi problem like this before. Even put a huge filter on coax and chokes on all power cords on affected appliances.Did'nt help.

"Certainly, there is no hunting like the hunting of a man; and those who have hunted armed men long enough, and like it, never care for anything else thereafter". Ernest Hemingway.

>
>- Aaron

"too bad for me?".....On the contrary, A., you have succeeded in taking a NG that pretty much was fixated upon "My Davemade is better than your XYZForce" and "keydown" posts, with a few good horsetrades thrown in, into a pretty good source of entertainment. I'll admit, some of the rather coarse and less creative imitators (or are they alter egos...again, what an effort!!!) get a bit taxing. What is a shame is that at one time, this NG was a good source of Q and A for radio stuff, albeit there were equal parts "legal" and "illegal" topics being addressed from a purely technical point of view. Most of the old legit. posters have gone, some long before you and N8??? et al showed up, and others since. That, in and of itself, is a shame, but the hobby has been heading that way altogether for years, and eventually the cycle will ebb and rise like it did in the 70's. Radio gets hot, then it fades, then hot again, much like the very solar cycle that wakes up the bands. For a while it was freeband, which had evolved into a structured and polite form of "ham lite", then from that source the No Codes exploded onto the scene when echo and handles appeared above .405, now the growth has faded and the even the once sacred cow of CW is on shaky ground in an effort to keep the hobby interesting and accessible in the Internet age. "Too bad?" More appropriately "too sad". Still, the Jester played and danced right until the end, why would it be any different here? Zealot or ballbuster, Aaron, at the end of the day it makes little difference and holds little meaning both to me personally and to the world in general. Good luck my friend, one day you will see this as either your best gag, or a totally wasted use of you talents. Go enjoy your family.

$50 or so, and in the c-note range for the AC piece, as you may have
noticed this NG has gotten a bit hostile to sale items of this nature
lately, and eBay routinely kills most auctions of this nature. Look around,
there are still places to unload this stuff.

# 399. Re: See what a ILLEGAL KEYCLOWN GOT!!!! HAHAHAHAHH!!!

Newsgroup: rec.radio.cb
Date: 2001-02-03 05:05:59 UTC
From: The Packrat

an inspection was also a
violation.
The FCC's Houston Office issued Martin an Official Notice of Violation
last April. Martin replied
by letter, acknowledging that he understood that operating on the
frequencies in question was a
violation and that the FCC has full inspection authority. He also
promised that "no further action
by the Commission" would be necessary to ensure his compliance with the
FCC rules. In July,
Martin turned in his Amateur Radio license for cancellation. He was
again warned about
unlicensed radio operation.
Martin's troubles didn't end there, however. Last October, following up
on complaints of RF
interference to a telephone in Martin's neighborhood, the FCC again
tracked transmissions on
27.535 MHz to Martin's residence. At the same time, the agent also
observed the RF interference
on the neighbor's telephone. Later that same month, the FCC monitored
voice transmissions on
27.455 MHz that were tracked to Martin's residence.
Again, the agent knocked on Martin's door and asked Martin to inspect
his radio equipment.
Martin reportedly again refused, telling the agent he believed he was
being "unfairly targeted for
enforcement" because many other operators also transmitted on
unauthorized frequencies.
The FCC NAL said that, based on the evidence, Martin "repeatedly and
willfully" violated Section
301 of the Communications Act by operating without an FCC license and
by refusing to allow an
FCC inspection of his radio station.
"Martin's violations were repeated and willful, and resulted in harm in
the form of electronic
interference to neighbors' home electronic equipment," the FCC said in
the NAL. "Martin was
advised of these violations numerous times, both orally and in writing,
by Commission
representatives and Martin indicated that he fully understood the
requirements of the Act. Martin
repeated the violations after receiving these warnings." The FCC said
that applying its Forfeiture
Policy Statement and statutory factors to the case, a $17,000
forfeiture is warranted.
The $17,000 fine is the third major forfeiture levied in recent months
in an Amateur Radio-related
case. Martin has 30 days to pay or to request reduction or cancellation
of the proposed forfeiture.

Sorry Paul, tell your argument to the FCC.

FCC ISSUES REMINDER ABOUT HF TRANSCEIVERS

The FCC has issued a friendly reminder about those HF transceivers ostensibly marketed for "amateur" use, but actually designed and intended specifically for the so-called "freeband" radio operators, who operate primarily in the 26 to 28 MHz frequency range.

In a May 13 Public Notice, the FCC points out that it's a violation of FCC regulations to import or market a transmitter designed or intended to operate outside the amateur bands unless the equipment has been issued a grant of equipment authorization for the radio services it's capable of operating. The FCC says it wanted to clarify its rules on equipment that's "intended to operate in various radio services in the high frequency radio spectrum, including '10-meter' Amateur Radio Service (ARS) equipment." The notice--directed to "manufacturers, importers, vendors and users of these transceivers"--emphasizes that transmitters intended for use by FCC-authorized radio services except the Amateur Radio Service must be type-accepted.

In the words of the Public Notice: "The Commission considers that the transceivers discussed above are intended to be operated on frequencies where the use of type-accepted equipment is required, because of the simplicity of modifying them to extend their operating frequency range."

The FCC also noted that it's illegal to import, market or operate a transmitter that requires a grant of equipment authorization but for which no grant has been issued, and that it's a violation to transmit on frequencies allocated to a licensed radio service "without the appropriate Commission-issued station license." Violators could be subject to fines or imprisonment as well as equipment seizure and forfeiture. - FCC

Very thoughtful, Bill. But the larger question is why an astonoshingly sizable group of people continue to devote large amounts of time and personal resources to stop me from posting pro-legal CB opinions.

If illegal CB were such a "trivial issue" in the larger scheme of things, you would think one man's protests against it would be pretty much ignored, right? Wrong. Instead, dozens of pro-illegal activists pop out of the woodwork with innumerable threats, bizzare defenses, and vows to "shut me up".

Can I take credit for the result? No, in all honesty, the staunch "defenders of illegal CB" are the folks that deserve the credit for transforming this newsgroup into what you see today.

Sincerely,
Aaron

Ooooh you have lost Mr Goober now. I too have used R&S equipment and find it a little more robust than WJ. I was saving the calibrated antenna bit for later in the 'discussion' but as you rightly point out the S meter can only be used for relative measurements. It was a very silly thing for the second poster to compare my 'QRM' level at his 20 to Mr Goobers reading as we all know (well most of us) it was a meaningless statement...but then again I was not surprised.

Goober....get this straight. Can't you understand that everybody is different. I personally do not like the ham way of operating voice over HF as it is the same now as it was in the 70's (give or take) except everyone is 30 years older. That's not to say I have no time for Amateur Radio Operators. I'm sorry but I enjoy the less regimented freeband way of operating. It doesn't make me any less of a person. Why are you so hell bent on wrecking other peoples means of personal enjoyment? Did you have an unhappy childhood? Go on, be a man and bow out of the NG gracefully.

You CAN'T be THAT dense! Do you REALLY think when the FCC considers
restructuring Ham radio that they consult a 'News Group'??? There was about
a 1-2% reply rate from the amateur community when the FCC asked for input on
the proposed restructure.... 98%+ couldn't be bothered, but EVERY ONE of the
manufacturers, Magazines, and commercial interests had lots to say.... go
read the original paperwork and you'll see how much influence they had.

Well... I guess my excuse is, 'I had some time to waste...' :^)
Figger' I did just that! But... who knows? Maybe someday Leland will show
up at one of my VE sessions for an upgrade... I work with the VE group that
runs the largest and most available testing sessions is his Metro area....In
fact, judging by several hams I know whose callsigns bracket his, he
probably tested at one of our sessions for his tech.....

>From: "igotdapower"
>he seemed real interested by that post hahaha ... sounds like he is
>passing the buck

My Dear Mr. Power:

As a "veteran" of this (and other) NG, I recognize the tactics employed by those who wish to divert people from the truth. In this case, participants were demanding that I produce evidence showing that I correspond with the FCC's Chief Enforcement Officer, Riley Hollingsworth. You were a doubter who said, "Yeah, I want to see it for myself!"

Accordingly, I posted the memo, along with the headers. The common defensive move from folks like you is to ignore the text and headers and to try to discredit me by saying in effect, "Okay. You got a message from Riley. But so what? He's not really interested!"

Just the opposite is true. Mr. Hollingsworth and the FCC are VERY interested in the illegal CB market, primarily because of its effect on other radio services. As someone pointed out, illegal equipment is nothing new to 11 Meters. It has been there for years with little or no FCC intervention. The change came with the introduction of cheap, "dirty" amplifiers, along with the rise in the use of echo mikes, snipped limiters, and "freebanding" just beneath the 10-Meter DX window. The old CB gang knew how to avoid attracting attention to what they were doing, unlike the present generation of vocal individuals who openly brag about what's going on. It is this latter group that caught the attention of the FCC through complaints from hams and from the public (which is tired of interference to their TVs and telephones).

Back to the memo from Riley. When you read it on rec.radio.cb, you saw only a small portion of the entire E-mail. The missing part refers to an ongoing investigation into deliberate interference to an Amateur repeater by an unlicensed person. The government has identified a suspect, and I have been assisting the FCC by researching the individual in public records, trailing and photographing his vehicle, getting the name and address of his employer (he creates some of the interference from company property), and by observing his residence to see what antennas are visible.

In other words, what appeared in rec.radio.cb is not representative of the tone and content of Riley's E-mail because it was abbreviated and out of context. This explanation is not for your benefit, Mr. Power. You are who you are. Rather, it is for anyone who might be new to Usenet and thus is unfamiliar with the tactic of diverting attention from real issues by using smoke screens.

I know the old timers immediately recognized the ploy. Most folks have seen plenty of trolls and defensive people, and they know how this game works. (See

RULES below). You played it "right by the book". And I don't have any illusions that you will stop doing so. Leopards don't change their spots!

Best regards,
QRM

---

**Rules for "Keep Provin' It"***

1. Challenger disputes something said by Player A.
2. Player A answers Challenger politely.
3. Challenger disputes a point in A's answer.
4. Players B and C add their support to Challenger.
5. Player A provides a long, very detailed explanation which proves the original statement.
6. Challenger ignores proof and begins attacking Player A's credibility as a person. Words like "Nazi" and "scum" are used.
7. Challenger wins if nobody notices that he has successfully shifted everyone's focus away from the original issue.
8. If game is played too often, opponents become skilled at detecting Challenger's tactics early on, and Challenger will be forced to find new, inexperienced players.

:
: Sorry Paul, tell your argument to the FCC.

Did you actually read your posting?

Sorry Aaron but *you* obviously dont understand the rights of individuals or the FCC Regs you cited. This pathetic intimidation tactic you are attempting with my post might work down at the school yard with people who dont know any better, however some of us actually *know* what we can or can not do.

My radio is a "FCC type accepted" transceiver of which, any venue can be chosen to market this item, whether it be rec.idiots.numbskulls, rec.radio.selfappointedradiocop, or rec.radio.cb for that matter. It is up to the end-user to comply with FCC Rule and Regulations.

There are more benificial and productive contributions you can make to society rather than attempt to incorrectly police a newsgroup with what you *think* is contraban.

PS: Not that it matters, but there are just as many Ham contributors to this group as there are non-licensed individual. Why dont you purchase my radio, its a great buy.....

Ah hell, Paul, don't worry about Dougie, he is deeply offended and disturbed ever since he lost the only gal he ever had to a big keying cber and no one lets him talk in his area, so he TRIES to offend here...key word "tries'. As you correctly stated, he knows nothing of real law and his only stated and self-admitted purpose is to try to troll, offend, curse, and recruit memebers of his rainbow coalition, and I ain't talking no Jesse Jackson Rainbow thing, neither. Don't sweat the small stuff. People buy stuff off of here without ever publicly posting. There are way more 'baggers here than there are postings. Lotsa good folk, just weed through the fecal matter and killfile the bottom feeders.

I am glad to see you are playing Joe "rf Cop" I hope the person you are following and tailing catches you in the act and puts your lights out. What is your authority to play Joe Cop did Riley Deputize you ? And again Riley seemed less than interested in the letter if you snipped important parts that's your fault. .. Do you think your the only one who has ever gotten a e-mail back from Riley? if so you are a mental midget... well you better not spend to much time on NG your perpetrator might be leaving the house and you will miss your chance to "tail" him .. what a loser ...

Wellllll, I applaud you QRM, for posting the memo, even though it was an auto reply. I never said I disbelieved you, I just wanted to see it. See, I disbelieved DOugie which is why he screamed as soon as I questioned you about it. Your interpretation is semi-correct, Riley indeed is interested in enforcement when it concerns hammies indirectly, or directly. You say he is interested in the illegal cb market..well, sort of, yes AND no. A just as accurate statement would have been Congress is worried about you and mine's welfare. Riley will only persue matters related to or affecting the hammie bands, directly or indirectly, UNLESS it is a REPEATED malicous, interference complaint that can be deemed a safety issue....AND I HAVE THE DOCUMENTATION PROVING THIS. Anything else and the buck gets passed. If unlicensed ten meter traffic disappeared overnight, Riley would give not a care toward cb at all. But I applaud your position, and even your actions in an odd sort of way, although I have my own feelings on the matter and why you may do what you do, at least you have the sense to realize you aren't going to change a thing in here and you actually go about what you do with a plan of action, purpose, and end result, and you haven't resulted to screaming or swearing. You also appear to recognize one opinion is no better than another, thus you bring a logical approach to debate. There's hope in here yet for friendy disagreement and discussion.

Aaron/n8wwm the only one spending time is you and your foolish posts. Your cause may be a noble one in your eyes but the way you have presented it and gone about it are totally wrong. You are not going to change anyones mind in the NG with your "strong-arm tactics"your stupid mockery and web page creations of anyone that goes against your beliefs is really a sad situation. I think you should be out protesting on the streets to people who care because you aren't going to stop anyone from doing anything .. For all you know We are all sitting here bullshitting each other. I want to know since when is talking about something illegal and when is it evidence of guilt ... It is not it is pure conjecture on your part you are here to try and get a rise from people pure and simple... why not go to rec.TV.satellite dish and go break the stone of those who use illegal cards in the satellite dish.. I am sure Riley would love to see that, why not go to rec.car.insurance fraud cheaters. You could actually help people save money by being a crusader ... But that is not your legitimate goal you are here to harass and cause disruption against the same people who you say are disrupting others ... So why is it ok for you to act like an ass and the others its not ok?

As good an excuse as any if one is needed. I, too, have done the VE thing. I have administered the Extra to a blind man in Wisconsin Rapids at 25 below and didn't mind paying the tow and thaw-out bills. I have administered the Extra to a man who had about 3 years to live from a lung condition and had a goal of making DXCC before he was planted. Next to these two guys, code-test whiners make me puke.

Why does an anonymous person care about something perfectly
legal, i.e. the posting of an ad for an amateur radio on a forum which
provides a good source of experimental components and
legally usable equipment?

A search of newsgroup archives will demonstrate, in my opinion, that he is
trying to intimidate and harass people.

Why does Voobner engage is such intimidating behavior? Why
does Voobner seek to limit free speech and limit lawful activity?

Voobner posts anonymously, thus is a troll (albeit dangerous).
He is also a coward.

WC1J

Clearly identifying myself thusly demonstrating that you have
no power to intimidation me with your threats or actions of forwarding email
to Riley Hollingsworth at the FCC.

Voobner's real identity will be uncovered if he engages in
actionable behavior.

It isn't an either-or proposition. I can't personally envision doing both Amateur HF and freebanding but nowhere is it written that you can't. I have no doubt that a lot of denizens of Channel 41 and up are also on the local repeater. Two of the infinite aspects of radio.

It is possible that he can't but at least he does not bleat about the code test.

Greetings!

THX! Will check into this.

On Fri, 2 Feb 2001 23:27:53 +0000, while the modem was ice fishing
with the Mouse, Philip de Cadanet <phil@invest.fsbusiness.co.uk>
dissertated the following:

:+> Hi Andy,
:+>
:+> >Phil! Got any sites where I can see the class D TX operation?
:+>
:+> If you want to find some info you could do worse than search on: AM
:+> broadcast transmitters
:+>
:+> But you maybe limited in what you'll find other than tx specs rather
:+> than circuit design and theory.
:+>
:+> Best to look in some ham books for design principles.
:+>
:+> I've mentioned Fritz Raab's work on class-E pa's before.
:+>
:+> Search on class-e and his work will come up including the article 700w
:+> cw on 160m for under 10 dollars!
:+>
:+> Good luck.
:+>
:+> Phil / UK

Regards!
:+> Andy <+:

... You know your radio is really Modulating when...
... Elvis shows up at your doorstep and asks to use
... your Microphone!!!

******,

http://www.amasci.com/weird/flamer.html

Up to SCIENCE HOBBYIST | HELP
Flamer Personality Disorder?!!
Newsgroup Flaming as a form of mental
illness

by William Beaty, 2001

I've met a certain class of people on Newsgroups and e-lists who all
seem to have the same "symptoms."
I am led to suspect that their type of behavior is a form of mental
illness. To discuss this, first I must
define it. My list of "diagnostic criteria" for FPD, the FLAMER
PERSONALITY DISORDER is below.
(grin) Know anyone like this? It's a composite description of two
real-world people I know, plus three of
the worst online "flamers" I've encountered, plus the "flamer" side of
my own personality.

Links elsewhere

Accidental flamewars
The Lying disease
Conversational Terrorism
Handbook of Logical Fallacies
'Flame'
'Flamewar'
Personality Disorders
Symptoms list
The People of the Lie (book)

Symptoms:

1.Namecaller: This defines the flamer. "Flamer" means "namecaller."
Their primary purpose
in life seems to be to make others feel bad about themselves. When
their namecalling hits
home, the flamer becomes stronger while the victim weakens, as if a
flamer steals self-respect
from others to add it to their own. Flamers are VERY good at this,
and they are very good at
keeping it hidden. Often the namecalling will subtly infect every
bit of a flamer's conversation
to the point where it becomes invisible, and the flamer's victim

appears genuinely small and
evil. Sometimes the namecalling seems like mental illness because
it is unconscious: the
flamers seem totally unaware that they do this, and will honestly
deny it when confronted.
Strip the namecalling from an ongoing flamewar, and it becomes a
discussion.

2. Competitive/argumentative: flamers are verbal brawlers, they
obviously enjoy fierce
arguments and flamewars. Aggression is what they live for.
"Fighting and defeating other
subscribers is what life itself is all about." And their stance is
pure aggressive competition, "kill
or be killed," where giving ground or working cooperatively with
colleagues is impossible.
They are extremely uncreative, and see success as something to be
stolen from opponents.
They don't manufacture their own "joy", instead they want to take
YOURS. To get them to
change a single opinion, you must utterly defeat them in a public
battle. And more often than
not, they will conveniently forget the entire event, and restore
their original opinion the next
day. At the same time they consider themselves "open to reason."
Very twisted stuff.

3. Amoral: they believe that their insults, verbal abuse, character
attacks, lies, and even death
threats are perfectly acceptable behavior, once "justified." Zero
empathy, Zero compassion:
totally blind to the pain that their behavior brings to others.
Love has no place in their mental
toolkit. The very existence of other sensitive beings is not really
"real" to them. If they still
have a tiny sensitivity to others' pain, they crush it with words
like: "she deserved it!", or,
"well, they started it!" If you honestly complain to a flamer,
expect their response to be
"You're Not Hurt!", said with sneering contempt.

4. Vengeful: they believe that once an insult has been received, it
becomes perfectly
acceptable to return the insult, or even to embark on a longrunning
insult stream. They remain
convinced that giving insults in response to insults is always
justified, even REQUIRED.
"Flamewars are not shameful. Only people who START flamewars are
shameful."
Unfortunately, flamers constantly start flamewars: they feel an
enormous NEED to respond to

all insults, even the tiny ones, and even to the ones which any bystander would see as an
obvious misunderstanding. Often they can't bear to wait around for a genuine insult, and so
they "misunderstand" things intentionally, in order to TAKE insult. This makes new
opportunities for the aggressive "tit for tat" behavior they so enjoy. But it's dishonest to call
this "tit for tat". It's more like "how DARE you!", followed by a stream of revenge. Some
flamers see others' lack of vengefulness as being disgusting weakness: "I insulted you, and
you're such a weakling that you just ignored it."

5. Deceitful: flamers see nothing wrong with lying as long as they're not caught. They
constantly lie as a defense, but are extremely skilled at keeping the lies from being seen. As a
result, flamers often seem far more honest than a normal person. Most onlookers won't know
that lies are even present at all, unless they personally argue with the flamer. If a victim tries to
point out the lies, often the onlookers will DISBELIEVE THE VICTIM, and take sides with
the flamer! The flamers' lies subtly penetrate everything. Call it "oily persuasion" or "malignant
dishonesty." Very Creepy! They duck responsibility for problems they have caused and put
the blame on others; often upon the victims of their attacks. They are dishonest about lying
itself: "after all, Truth is a matter of opinion." No. Truth is what's left over when all the lying
stops. Flamers believe that their undiscovered lies are not "real", and will sometimes smugly
say "you can't prove that I was lying" when you have discovered that they are. Their
conversations are filled with a recognizable slipperiness, like talking to a sleasy politician or
dishonest lawyer, or Dr. Smith from the old "Lost in Space" TV show. Like lawyers in a
debate, they aren't straightforward and truthful. They are masters of persuasion and will try to
manipulate you into huge disputes about infinitely decreasing levels of minutiae in order to
divert you from your original topic. Distraction is their weapon. They'll suddenly attack your
misspelled words. They love to dishonestly redefine common words, then to argue endlessly
about this. Remember Bill Clinton, who responded to questioning by asking "what do you

mean by the word 'is?'" Flamers are intellectually dishonest;
they're 'truth obscurers' rather
than truth seekers, promoting 'darkness' rather than illumination.
They often seem to be
thinking: "Lying about my thoughts is the safest. Nobody can know
what I ACTUALLY was
thinking when I said those words earlier, so I am free to lie in
order to completely change my
original meaning, and nobody can prove that I did so. " Sometimes
they believe all their own
lies utterly. That's the worst, because then they see themselves as
impeccably honest... and
see everyone around them as a despicable liar.

6. Narcisstic: they have extreme vanity, taking the form of an
exquisite sensitivity to anything
which even SLIGHTLY resembles an insult. They cannot let small
perceived insults go by,
but must respond. This is because they're using a false,
artificially good "self-image" in order
to remain blind to their own rotten behavior. Others' bad opinions
can damage their fragile
false image. As a result, their sensitivity to "What People Think"
is very large. For example,
sometimes they behave quite differently during private email
conversations than on a public
forum. Healthy people spend a bit of time letting down their guard,
publicly talking about their
successes, personal flaws, comparing notes with fellow humans, etc.
Not so the worst flamers.
This whole side of their conversation is simply GONE. Often they
will do almost ANYTHING
to avoid having their flaws noticed, or to avoid being embarrassed
in public. When things
aren't going their way, sometimes they'll drop the thread and go
silent for days, then upon
returning, lie about being "on vacation" or some such. Escaping
embarassment definitely
includes amazingly desperate attempts to avoid being proved wrong
in front of colleagues.
Whenever they're in danger of losing a public argument, they tend
to slip into an intellectually
dishonest or even disturbingly "brain damaged" style of reasoning
which tends to create
feelings of confusion or even nausea on the part of onlookers. It's
like looking on the naked
face of genuine insanity. If you have ever seen this occur, you'll
never forget it.

See this appropriate DILBERT cartoon:
http://www.dilbert.com/comics/dilbert/archive/dilbert-20010107.html

7. Paranoid: they constantly display secretive behavior, being careful to never freely discuss
personal info about their schooling, experience, everyday lives, etc. This goes with #6 above:
to project a dishonest image of being a superior "expert" rather than a flawed fellow human,
they must carefully prevent anyone from learning the simple truth about their actual
background and experience. They commonly hide behind "handles" and "online names" so
that web searches cannot turn up any real-world info about them. They have no real friends,
and instead treat everyone as an enemy who might be "collecting damning evidence" and
cannot be trusted. They can never let down their guard and take part in a simple human
conversation, as if that might give their opponents some weapons which will be used against
them in future battles. On the other hand, if a person has a true personality disorder, there
may BE no genuine human being there with which to communicate, and flamers desparately
try to hide this fact, especially from themselves.

8. No self-doubt. Perfect people don't have to guard against making mistakes (unless those
mistakes involve being caught lying, or letting their false image be exposed.) Also, they see
nothing wrong with responding to PERCEIVED insults; it never occurs to the flamer to first
check out if their perception was a mistake. They seem to be thinking: "since I never make
mistakes, then whenever I feel insulted, somebody MUST have insulted me intentionally." Or
this: "since I never make mistakes, whenever there is a difference of opinion, the other guy
MUST be wrong, therefore I don't have to examine my own arguments even slightly, much
less intentionally go looking for possible flaws." And lacking self-doubt, they will use YOUR
self-doubt against you by constantly calling your motives into question during an argument.
But note that they never take their own advice and sit down to analyze their OWN motives.

9. Self-blind: No insight into their own flaws and foibles. They cannot see their own mistakes
no matter how obvious they to others, and as a result they often act like superior and perfect
beings who are surrounded by contemptible inferiors. A capsule description of the pure flamer
personality could be "haughty superior arrogance" or "smug sneering

contempt."

10. Hypocritical: totally enmeshed in a self-serving bias: "when I do it, it's a pure and justified deed, but when you do exactly the same thing, it's a shameful and disgusting PLOY." They constantly give advice to others, but it's very obvious that they don't practice even a tiny bit of what they preach. They're always polishing a collection of "reasonable arguments" to justify any of their common misbehaviors, all the while remaining convinced that the same behaviors are reprehensible when others do them. For example, flamers often describe their personal attacks as "constructive criticism", but describe any criticism they receive in return as being "character assasination." Another: flamers often suddenly change the subject to "try a new approach." But if their VICTIMS ever dare to start anouther thread, obviously they're being "manipulative worms who suddenly change the subject in order to weasel out from under my just criticism."

11. Egocentric: they have a very low opinion of others, and an exalted opinion of themselves. Their humility is almost entirely absent; they act as if they think they're spotless. They also act as if everyone else has disgusting flaws which need to be pointed out in great detail, but if anyone does the same to the flamer, the flamer reacts fiercely. Some of them regard humility and self-criticism as a weakness or a character flaw. They freely and harshly criticize others, but become angry and extremely defensive about the smallest criticism they receive, sometimes even flying into screaming rages. They never apologize, ever, and if you should ever apologize to them, they will use it to emphasize your embarassing error. Their noisy, obnoxious behavior and constant flamewars seem like transparent attempts to draw attention to themselves. Often this effort seems almost "evil", as if the attention they crave is being sucked out of the hearts of everyone around them.

12. Denying/projecting: They cannot see reality honestly, but must constantly manipulate it by erasing some parts and distorting others. E.g they clearly see others' flaws and launch an attack, all the while hiding from themselves the fact that they

have EXACTLY those flaws in
enormous quantity. Sometimes their victims don't even have those
flaws at all, and the reason
for the flamer's attack is nothing but a delusional "projection" of
the flamer's flaws onto their
victims. They constantly redefine honest descriptions of events
into dishonest alternate
versions, and will argue incessantly about the "special" words
which MUST be used to
describe something. To maintain denial, they must add a dishonest
"spin" to all descriptions in
order to prevent any clear viewpoint of the world from intruding.
During arguments, a flamer
typically takes the stance of a pure and rightous warrior battling
a disgusting foe. ( i.e. they
"project" a falsely pure image onto themselves to cover their
flaws, as well as "projecting" a
false demonized image onto their opponents to make them seem evil.)
Projections are
seductive and difficult to fight, and sometimes the victims of
flamers will find themselves
pulled into the role of "inferior disgusting foe," and then begin
to play that character against
their will. But note that the role comes from the flamer, not from
the victim, and it's part of
the flamer's deceitful attack strategy, which is the REAL cause for
disgust.

13. Pervasive, long-standing, intense symptoms: Anyone can get
angry and "flame" you.
And everyone, including both you and I, has a very large "flamer"
side to their personality. But
having a temper is not the same as having a mental illness. To have
a "Personality Disorder", a
person has to BECOME the symptoms, so their whole world is ruled by
them and little
humaness remains. There is a difference between acting like a
flamer from time to time,
versus taking on full Flamer-hood 24/7. Of course Personality
Disorders are also on a
spectrum; just because somebody acts normal occasionally doesn't
mean they're not habitual
flamers. A clue: if someone has a very widespread reputation as "a
flamer", then their problem
might run deeper than occasional bursts of anger. Another clue: if
you clearly can see yourself
in the symptoms I describe above, then you're not at all self-blind
and are probably normal. :)

However, if you are CERTAIN that not the slightest SCRAP of the
above information could

EVER apply to you in any possible way, and it's a TERRIBLE INSULT
that someone could
even THINK such a thing about you... well...

"I have never met a man so ignorant that I couldn't learn something
from him." - Galileo

FLAMEWARS: SYNERGISTIC COMBINATIONS OF THE ABOVE:
Invariably a flamer will start a flamewar. First the flamer attacks
another subscriber unexpectedly. It
happens because the flamer felt insulted (exquisite sensitivity to
insults), but usually this insult was
entirely in his/her own mind. But the flamer never considers that he
might have made a mistake about
interpreting the insult (no self-doubt), and he also sees a NEED to
answer every insult with insults
(vengeful, narcissistic.)

Having created a fight while blaming others for starting it, the flamer
then lays into his victim, (amoral,
combative), while seeing his own actions as a righteous battle against a
disgusting enemy (projection.) If
the victim seems hurt, the flamer will be disgusted by such weakness
(amoral.) If the victim responds in
kind, the flamer will immediately complain bitterly about this, while
steadfastly denying that the type of
attacks he so hates are identical to the ones he's using himself
(hypocrisy, self-serving bias.) If other
subscribers object, they are are ignored as beneath contempt
(egotistical), or ignored because he KNOWS
they must be wrong without even listening to their reasoning (no
self-doubt), or because he is certain that
they have hidden agendas (denial/projection.)

The flamer typically ignores a moderator and refuses to alter behavior,
and can only be stopped by
ejection from the forum. Sometimes flamers attack the moderator in order
to get ejected (and therefore
feel smug righteousness at being "censored" or "martyred.") Sometimes
being banned from a forum
shocks them, and makes them reconsider their behavior. But usually
they're too far gone for this to
penetrate their defenses. They will refuse all responsibility for the
problem (deceit, denial), blame it on the
moderator or on the group for conspiring against them in private
(paranoia), and totally refuse to look at
their own mistakes in an honest light (denial,deceit, self-blind.)

Heh. Don't you just LOVE encountering a full-blown Flamer?

WARNING: AS A PSYCHOLOGIST, THE AUTHOR OF THIS PAGE WOULD MAKE A GOOD
ELECTRICAL ENGINEER! This webpage is half-joking. But only half. I have

no experience in
psychology except as a customer of marriage councillors, and a
practitioner of painfully honest
self-examination. On the other hand, I was an asshole myself in my
younger days, and it's easy to list the
above symptoms when you can see them from inside. (The term "flamer" is
short for "flaming asshole.")
More about me.

"Put an end once and for all to this discussion of what a good
person should be, and be one."
- Marcus Aurelius

Nobody is worthless: they can always serve as a bad example! If you hate
flamers, don't attack them.
Instead, try to stay painfully aware of the "flamer side" of your own
personality, and don't ever act that
way. If you think you HAVE no Flamer inside you, then you'd better be
Ghandi, because if you're not,
then you've got a very serious case of self-blindness. You might be 100%
flamer without knowing it!
Does this scare you? It should. It's no joke.

Below is some REAL info. A note about the following. A personality
disorder must "lead to distress or
impairment", but some flamers seem well adapted to modern life, and it
is EVERYONE AROUND
THEM who becomes distressed or impaired. Like a happy and well-adjusted
tumor exuding poison that
kills the body. Another note: much of the above I lifted from Peck's
PEOPLE OF THE LIE. In other
words, the flamer is the "online persona" of one of Dr. Peck's examples
of human evil.

And most important: have some compassion. Mental illness is illness, so
don't take attacks so personally.
In some cases, Personality Disorders are created by extremely cruel
childhood mental abuse which
victims received from parents who themselves had a disorder. Emotional
child abuse leaves no physical
trace, so it probably occurs far more often than anyone realizes. Don't
fight with the sick person, but also
think twice about welcoming them into your home (or your forum.)

Personality Disorders: general

The definition of "personality disorder" from the APA's DSM-IV
manual: an enduring pattern
of inner experience and behavior that deviates markedly from the
expectation of the
individual's culture, is pervasive and inflexible, has an onset in
adolescence or early adulthood,

is stable over time, and leads to distress or impairment.

A Dr. S. Vaknin gives this list of common features of all
Personality Disorders

1.Self-centeredness that manifests itself through a me-first,
self-preoccupied attitude .
2.Lack of individual accountability that results in a victim
mentality and blaming others,
society and the universe for their problems
3.Lack of perspective-taking and empathy
4.Manipulative and exploitative behavior
5.Unhappiness, suffering from depression and other mood and
anxiety disorders
6.Vulnerability to other mental disorders, such as
obsessive-compulsive tendencies and
panic attacks
7.Distorted or superficial understanding of self and others'
perceptions, being unable to see
his or her objectionable, unacceptable, disagreeable, or
self-destructive behaviors or the
issues that may have contributed to the personality disorder
8.Socially maladaptive, changing the rules of the game,
introducing new variables, or
otherwise influencing the external world to conform to their
own needs
9.No hallucinations, delusions or thought disorders (except for
the brief psychotic episodes
of Borderline Personality Disorder)

"To do evil, a human being must first of all believe that what he
is doing is good"
- Alexander I. Solzhenitsyn

Source record: 72145

It's simply a matter of being slightly but constantly dishonest, of bad-mouthing the truth so that it vanishes, of coming up with warped justifications for illegal actions, and then learning to be blind to the warpings. It's simply a matter of comforting themselves with small lies, and then believing them. The lies turn invisible and form a new level of "truth" on which more and more subtle lies are again added, until their system of beliefs slowly twists into something that is totally at odds with reality. A circular rejuvanating plan of bullshit piled on bullshit, and reinforced by others who wish to believe the same lies.

## 466. AMPaholics Anonymous

Newsgroup: rec.radio.cb
Date: 2001-02-03 18:56:26 UTC
From: "Mr. Aaron H. Voobner" <aaronvoobner@my-deja.com>
Message-ID: <95hk8o$fi0$1@nnrp1.deja.com>
Source record: 72146

Someone posts a mention of a 10KW amp and right away, Tim shows up, hands shaking, junkie-sweat on his brow, "C-c-c-can I see a picture of it? Huh? Please?"

Normally, I wouldn't say anything but lately, I've noticed a serious problem in this newsgroup. Many of you guys are FIXATED on AMPS. And it's not a normal, technical interest. It's almost, well, like an ADDICT fixated on some narcotic.

I have seen you guys drooling over "Big Amp" pictures like 10 year old boys over a Playboy centerfold. What goes on in your minds? Do you guys look at the pics and fantasize about what it'd be like to be "King Of The Band"?

Even if there's no pictures, all it takes is a mention of the word "amp" in this NG - and a bunch of shakey addicts come RUNNING. "What tubes/pills does it use? How much does it deadkey? Does it have a bias scheme? Got any photos?"

It's not normal I tell you.

I'll be studying this problem (purely from a psychological perspective) in weeks to come.

Thanks,
Aaron

You need to read the entire FAQ I guess. Answers to your questions will
be found in it.

Thanks,
Aaron
---

VOOBNER FAQ

-Who is Aaron Voobner?

Aaron is a guy who responds to the supporters of illegal CB, many of
whom dominate the rec.radio.cb newsgroup and otherwise attempt to
intimidate proponents of legal CB operation.

-Are you a real guy?

Yes, Aaron is a real guy and his name really is Aaron H. Voobner.
Despite being the subject of a *desperate* search by illegal CB'ers in
the USA, his personal information remains readily available on several
legitimate databases.

-Is Aaron Voobner N8WWM?

No. I don't use profanity and I don't post porno.

-Why do you hate illegal/outlaw CBers?

Their big amps screw up the CB band for other users. Thier stealing
channels from government and hams is just plain dishonest. Plus, their
antics draw heat from authorities onto legitimate CB users.

- So why don't you just make your point and then go away? You're being "rude" to illegals by contantly poking your nose where it doesn't belong.

Reason #1. I don't respect people who have no respect for anyone else.

A new breed of "outlaw" CBer came along recently: folks with no respect for any one or any law. Folks who think they have a "right" to operate illegal CB and not be criticized for it. These "anything goes" people took over the CB band from the fine folks who were there for decades, and in many cases forced them off the air. These are the same idiots who post amp and freeband crap in the newsgroup and are rude to anybody who disagrees withe them.

Reason #2. Idiots need to be told they are idiots, until they stop being idiots.

The reason there are 5,000 watt amps on your local CB channels is because people tolerate it. No one dares complain. Everyone minds their own business. No one wants to get involved. The idiots get "respect" -- so they proliferate.

- But you're just riling up the illegals and making them angry. That's not being a responsible person.

There is nothing responsible about operating illegally. Illegal CB operation is done irrespective of FCC Part 95 and it's intended purpose. Loudmouthed, irresponsible individuals who promote illegal CB operation deserve little, if any respect from legal CBers. They give legal CBers a bad name in the eyes of the public.

-You're driving CBers away from the amateur radio hobby by making them hate hams.

I am not making anyone "hate hams" because I am not a ham myself. And it is doubtful that CBers who openly despise the FCC, flaunt rules, and have no consideration for other radio ops would be good "potential hams".

-You can't stop people from posting. It's perfectly legal to talk about illegal CB.

I don't try to stop anyone from posting. Talking about illegal CB is protected under the US Constitution under Freedom Of Speech. However, my criticism of illegal CB is also protected. You don't like it, don't read it.

-But you accuse innocent people of operating illegally.

I don't "accuse" anyone. I ask questions. And in any case, I have no authority to arrest or prosecute anyone, so why be so paranoid?

-But it's slander.

You mean libel. Slander is spoken. Libel is written. I hardly think it's "libelous" to ask someone who just finished bragging about

"dropping the maul" or "calling CQ on 555" if they are an illegal CB'er.

But if you think you have a case against me, you are welcome to pursue it. Your attorney will quickly tell you that you can't sue someone who calls you an idiot or disagrees with you in a Usenet newsgroup.

-So why don't you go to a CB coffee break and harass people?

I reserve the right to choose my own methods, thank you. I also express my opinions to legislators, auction sites, equipment manufacturers, amateur radio organizations, law enforcement agencies and public officials.

-Are you a wanna-be RF cop?

Nope. If I was, I'd be in here harassing people about antenna height and the 150 mile limit. That's Barney Fife, not me. It's not RULES I'm concerned with. It's illegal CBers BEHAVIOR. It's inconsiderate behavior of selfish idiots - who just happen to be breaking FCC rules.

- But illegal CBers are just bending the law. Like the Minutemen of the Revolutionary War. Or Rosa Parks during the Civil Rights protests.

Give me a break. There's nothing NOBLE about stealing frequencies that do not belong to you or locking up your local channels with a 1KW amp. If you truly wanted to effect legislative change of CB rules, you'd do it within the system.

-Are you a flamer?

No, but if I'm flamed, sometimes I'll flame back. Depends.

-But you're screwing up the newsgroup.

I'm sorry, but this newsgroup was screwed up LONG before I ever came. And if my opinions about legal CB "screw you up", then you have bigger problems than me.

-Your anti-illegal CB postings are useless.

Perhaps. But perhaps not. It is hoped that continued criticism of and opposition to illegal CB practices (such as "keydowns", CB amps, etc.) offends the self-proclaimed illegals to the degree that most of them will eventually get tired of the newsgroup and go away. That will open up rec.radio.cb for discussing the topic it was intended for: CB radio.

Aaron,

You wrote:

I'll be studying this problem (purely from a psychological
perspective) in weeks to come.

In your particular case this will be extremely difficult
for you as your emotional involvement with this issue obscures your
ability to see things objectively.

In either case, your particular addiction doesn't seem to be
quite as popular with this group. It might be that our obsession
is your "gateway drug"!

Hi,

You must be new here. A few tips.

1. I am not N8WWM.
2. The accusing me of insanity angle is not working.
3. I'll be here long after you leave, so save your strength.

Andrew,

Let's assume for the moment that your request is
completely "legit". These radios are legal for export.

I export large quantities of these radios into
au. Let me know if I can be of assistance.

email me at: fire228@cybertrails.com

Naaahhh...not a bit upset. I laugh my ass off at these jerks tryin ta
get under my skin. This is damn cheap entertainment. One guy on here
said I was having a good time "catching large mouth bass". That is a
good description. These gayboys light up like a jet engine in
afterburner...so predictable...I laugh...they scream, they cry, they
threaten, they call me names...I post some more...they scream, they
cry, they threaten...I laugh...I post more...they scream, they cry,
they threaten...I laugh...I post some more....etc, etc, etc...
To quote John Fogarty: "still forever on it goes, turns a circle fast
and slow..."

If these dorks could see how hard I laugh when they post their shit,
they would wimp out.

Aaron,

#1 The only reason anyone would require that information would
be in the course of doing business with me, which you are not.

#2 The fact that you went from this:

Let's assume for the moment that your request is completely "legit".

To this:

What is the name and address of this "legitimate business" you
are running, Mr. Anonymous?

Indicates to me that my earlier premise:

"I'd like to respond to that, but taking into account your
background, education, and intelligence, I am quite sure that you would
not be able to understand."

Was absolutely 100% correct.

My suggestion to you:

"Go find Mr. Anonymous and ask him your inane, pointless questions,
since it is also clear that you can't discern the difference between
fire228 and Mr. Anonymous". I grow weary of your tired, babbling,
inattentive attempts at engaging people in this ng in anything
resembling an intelligent discussion. The reason for that perhaps,
is because you do not posess the mental acuity or faculties to
follow a simple thread, much less pay any attention to what's being
said. Or maybe you just like reading things into the thread that
aren't there. Homey don't play any of that.

To the twins,

Well since my supposed "angle" is so obvious, let's
make sure we're all on the same page. You contribute
nothing positive to this ng whatsoever. My angle is
simply this:

"My next point will be so cogent that even you will be able to
understand it."

Neither one of you have been successful in "not responding"
to me thus far. I for one would like to see your new nonresponse
policy extend to every member in this ng. We are all tired of
your collective nonsense, not to mention your utter disregard
for the rules of engagement regarding your behavior here in this
forum. There's "my angle", just so we all understand each
other. The truth of the matter is, the rest of us would do well
do ignore the both of you instead. You are continually sticking
your noses into threads where you do not belong and you seem to
derive some perverse satisfaction in irritating the people in this
ng with your childish and antisocial tomfoolery. You both can
probably take a great deal of pride in the fact that this is the
kind of crap that gives ngs a bad name. Enjoy your legacy. After
all is said and done, this is all we will remember you for and
not much else.

Don't respond to me, go ahead!

Canned responses are all you two are worthy of.

Actually,
jack Thurston (a.k.a 228 and fire228) has been around a number
of years, spreading his particular brand of customer
service (rip em off).

The way he's going, I won't be too suprised if anyone makes
a public example of him on the end of a rope.

HPG 27100
Here are the specs on it Of course this is custom built...

Frequency 27 MHz
RF power 10 KW
Reflected power max. 2 KW
Impedance 50 Ohm
RF connector 13/30 (fem.) standard
Pulse mode standard feature ( 0-60kHz )
DC selfbias voltage 0-4000 V DC
Display 256x132 dor matrix LCD graphic display
Interfaces Analog and serial RS232
Interface optional Device Net
Cooling Water
Dimensions 19" Rack, 24 U high
Weight 110 kg.
Power supply 380/400V or : 208V delta 3phase
Power factor
Power requirement 16 KVA

## 499. FAQ Update

Newsgroup: rec.radio.cb
Date: 2001-02-03 21:12:28 UTC
From: "Mr. Aaron H. Voobner" <aaronvoobner@my-deja.com>
Message-ID: <95hs7o$lmh$1@nnrp1.deja.com>
Source record: 72179

Recently updated with pertinent information:

VOOBNER FAQ

-Who is Aaron Voobner?

Aaron is a guy who responds to the supporters of illegal CB, many of whom dominate the rec.radio.cb newsgroup and otherwise attempt to intimidate proponents of legal CB operation.

-Are you a real guy?

Yes, Aaron is a real guy and his name really is Aaron H. Voobner. Despite being the subject of a *desperate* search by illegal CB'ers in the USA, his personal information remains readily available on several legitimate databases.

-Is Aaron Voobner N8WWM?

No. I don't use profanity and I don't post porno.

-Why do you hate illegal/outlaw CBers?

Their big amps screw up the CB band for other users. Thier stealing channels from government and hams is just plain dishonest. Plus, their antics draw heat from authorities onto legitimate CB users.

- So why don't you just make your point and then go away? You're being "rude" to illegals by contantly poking your nose where it doesn't belong.

Reason #1. I don't respect people who have no respect for anyone else.

A new breed of "outlaw" CBer came along recently: folks with no respect for any one or any law. Folks who think they have a "right" to operate illegal CB and not be criticized for it. These "anything goes" people took over the CB band from the fine folks who were there for decades, and in many cases forced them off the air. These are the same idiots who post amp and freeband crap in the newsgroup and are rude to anybody who disagrees withe them.

Reason #2. Idiots need to be told they are idiots, until they stop being idiots.

The reason there are 5,000 watt amps on your local CB channels is because people tolerate it. No one dares complain. Everyone minds their own business. No one wants to get involved. The idiots get "respect" -- so they proliferate.

- But you're just riling up the illegals and making them angry. That's not being a responsible person.

There is nothing responsible about operating illegally. Illegal CB operation is done irrespective of FCC Part 95 and it's intended purpose. Loudmouthed, irresponsible individuals who promote illegal CB operation deserve little, if any respect from legal CBers. They give legal CBers a bad name in the eyes of the public.

-You're driving CBers away from the amateur radio hobby by making them hate hams.

I am not making anyone "hate hams" because I am not a ham myself. And it is doubtful that CBers who openly despise the FCC, flaunt rules, and have no consideration for other radio ops would be good "potential hams".

-But I'm a ham and I don't care what goes on on CB.

You should. Every decade the "CB problem" has gotten worse, not better. More illegal amps splattering your neighborhood consumer devices. More phoney export radios flooding the market. More freebanders and confused truckers showing up on 10 meters. I guarantee that if nothing is done, amateurs will be unwillingly "sharing" the 10 and 12 meter bands with unlicensed CBers in a very short time. How can you "not care" about this situation (unless you are part of the problem)?

- I support legal CB, but I do it quietly.

Good for you. However the opposition isn't quiet. In fact they are downright loud and disrespectful. I choose to interact with these people at their own level (which sometimes isn't very pretty or polite).

-You can't stop people from posting. It's perfectly legal to talk about illegal CB.

I don't try to stop anyone from posting. Talking about illegal CB is protected under the US Constitution under Freedom Of Speech. However, my criticism of illegal CB is also protected. You don't like it, don't read it.

-But you accuse innocent people of operating illegally.

I don't "accuse" anyone. I ask questions. And in any case, I have no authority to arrest or prosecute anyone, so why be so paranoid?

-But it's slander.

You mean libel. Slander is spoken. Libel is written. I hardly think it's "libelous" to ask someone who just finished bragging about "dropping the maul" or "calling CQ on 555" if they are an illegal CB'er.

But if you think you have a case against me, you are welcome to pursue it. Your attorney will quickly tell you that you can't sue someone who calls you an idiot or disagrees with you in a Usenet newsgroup.

-So why don't you go to a CB coffee break and harass people?

I reserve the right to choose my own methods, thank you. I also express my opinions to legislators, auction sites, equipment manufacturers, amateur radio organizations, law enforcement agencies and public officials.

-Are you a wanna-be RF cop?

Nope. If I was, I'd be in here harassing people about antenna height and the 150 mile limit. That's Barney Fife, not me. It's not RULES I'm concerned with. It's illegal CBers BEHAVIOR. It's inconsiderate behavior of selfish idiots - who just happen to be breaking FCC rules.

- But illegal CBers are just "bending the law". It's civil disobedience. Like the Minutemen during the Revolutionary War. Or Rosa Parks during the Civil Rights protests.

Give me a break. There's nothing NOBLE about stealing frequencies that do not belong to you or locking up your local channels with a 1KW amp. If you truly wanted to effect legislative change of CB rules, you'd do it within the system.

-Are you a flamer?

No, but if I'm flamed, sometimes I'll flame back. Depends.

-But you're screwing up the newsgroup.

I'm sorry, but this newsgroup was screwed up LONG before I ever came. And if my opinions about legal CB "screw you up", then you have bigger problems than me.

-Your anti-illegal CB postings are useless.

Perhaps. But perhaps not. It is hoped that continued criticism of and opposition to illegal CB practices (such as "keydowns", CB amps, etc.) offends the self-proclaimed illegals to the degree that most of them will eventually get tired of the newsgroup and go away. That will open up rec.radio.cb for discussing the topic it was intended for: CB radio.

Actually I have several, and one that won't stop calling me up on the phone.
May have to get my number changed because of that one. They're easy to find
and hard to get rid of when you're done with them.

> and do the drinking experiment on your own

Don't have to. The ones I get don't need any "artificial enhancement" to
look good like yours. 8-))

I suggested you check out the news group. As far as I can tell I didn't
mention the FCC to do so.

Go search the archives. They are there if you really want to find them. The point is not that the exams are "easy" but the fact that there is an open question pool. The major debate is around the issue of the open verses closed question pools. I think you are getting to two issues confused.

I don't recall any FAQ outlining the 'rules of engagement'. While I
may disagree with some of their methods, they certainly have the right
to pursue their goals using any legal method they choose.

I think it is clear as to which people they are trying to irritate,
and why.

> You both can
>probably take a great deal of pride in the fact that this is the
>kind of crap that gives ngs a bad name.

There are many, many newgroups that don't have a "bad name" or bad
reputation.

However, CB radio (the topic of this ng) has a very bad reputation,
which can be almost wholly attributed to illegal operators. This
concerns me, because whenever a privilege is abused, it is eventually
revoked.

> Enjoy your legacy. After

A trip down memory lane, Tim! I had not thought about those public tube testers in a long time!

The tube amps usually ran pretty clean, partly because they were properly balanced and were not being overdriven.

By the way, 100 watts from a tube always seems stronger to me that the same number of watts from a transistor! (grin).

>I am glad to see you are playing Joe "rf Cop"

Well, Mr. Power, it's this way:

The guy we're trailing is disrupting a wide-area repeater. Whether or not he is a CBer is a non-issue. We're more concerned that he jams emergency and priority traffic over an area 75 miles in every direction from the repeater site. There is $2500 worth of gear being abused by his actions. In addition to the expense, it is both inconvenient and dangerous to take a 15-minute elevator ride to the 1100-foot level of a television tower to make repairs.

To you, it may seem like an ego trip to go after this individual. Far from it. If we could get him to quit tomorrow, everyone would be pleased and the whole thing would be dropped. This involves lots of hours, plenty of gasoline, and bunches of cellular air time--none of which is reimbursed by the government. But all of this (and the several thousand dollar doppler DF unit) is willingly contributed to the effort in return for a promise of full cooperation by the FCC.

> .. Do you think your the only one who has ever gotten a
>e-mail back from Riley? if so you are a mental midget...

Hardly, old Son. Lots of folks hear from him. And I'm just a small fish in a large pond. But I appreciate everything he and his staff are doing, and I'll help him anyway that I can.

Meanwhile, thanks for your interest in the situation. If you still don't think this is the right thing to do, it's cool with me. These kinds of things are individual choices, and they are not for everybody.

Stop Voobner From Posting!

I knew that'd get your attention.

Anyhow, today I was sitting here reading the usual complaining and whining from illegals, and thinking, "you know, maybe these Bevises DO deserve a break from seeing my opinions about illegal CB. Not seeing a post from me for a whole day would be their idea of hog heaven. Wow, y'know, some people would do almost ANYTHING to make that happen".

And that's when it hit me. I COULD make the illegals dreams come true. But like everything in life - it'd come with a price. So I took the liberty of putting together a rough plan and thought I'd run it by you guys to get your reaction.

Here's how it'd work.

For every "keyclown" amplifier or "export" radio destroyed, I'll stay off the newsgroup for 24 hours. No posting, no lurking, no aliases, no nothing.

Of course the equipment and its destruction would have to be VERIFIABLE.

One idea would be to ship the gear to N8WWM (you all know his address) and have him email me as the equipment arrives - and again, as soon as it's destroyed. (Plus, I think he'd have a LOT of fun wailing on a DaveMade amp or an RCI2950 with a 10 lb. sledge)

Alternately, QRM or Yrac might volunteer a mailing address and underake verification/destruction duties.

Now, I know some of you would try and cheat by sending equipment that's not working. So there'd have to be both a visual and electrical checkout before any item is logged in as legitimate.

But I guarantee you this: each piece of illegal equipment verifiably destroyed will earn you 24 Voobner-Free hours on this NG.

That's it.

Dispense with the flames for once, and let me know your thoughts re: the plan's feasability.

Sincerely,
Aaron H. Voobner

There is a HUGE difference between tube and transistor amps.
Transistors run at a very low impedance and almost always use ferrite
transformers, a combination that just screams harmonics. The tube
amps, even ones that use sweep tubes, have an ouput tank that serves
two purposes: to convert the high ouput impedance of the tubes, and to
filter. Because of the higher impedances, the tank circuit in tube
amps is much more effective than tanks in transistor amps (which many
don't even have anyway). Because of their construction, the tube amps
are inherently cleaner.

Sparky, FLRC

## 521. Re: Advice Needed

Newsgroup: rec.radio.cb
Date: 2001-02-04 00:40:01 UTC

Message-ID: <20010203194001.04794.00000083@ng-fm1.aol.com>
Source record: 72251

Well said Fire228! In regards to the question about 10 over 9, the "standard" is that there are 3 dB to every S unit. So saying someone was 10 over 9 would mean that you are receiving 37 dB of signal. Since not all radios are callibrated properly as a previous post stated, it is really hard to assure that this "standard" is applicable to your radio.

Happy Hunting.
KG4EGM

P.S. It is not against the law to own a radio that is able to transmit in "freeband" space as long as it isn't used for that purpose. It is also not illegal to have for instance a 2950 that has been modified for CB usage until it is transmitted in that frequency range.

## 522. Re: 2950 or 2510 which one

I don't think it was ever powered up until I ran a quick test on it,
that discoloration is an external something or other, this thing was
stored in a shed for at least 3-4 years. Maybe it got coffee spilled
on it in the guys shop before it went into storage. It ain't from
heat.

## 527. Re: Straight from the FCC

Newsgroup: rec.radio.cb
Date: 2001-02-04 03:21:18 UTC
From: Eric Oyen <n7zzt@home.com>
Message-ID: <3A7CCAAE.48D58D90@home.com>
Source record: 72259

Interesting how you dug this amount out of thin air..

I can quote day and time in which you visited my residence, agreed to pay me
for the amplifier, did not pay me and sold it to another cb'er (handle of double D)
within 24 hours. you then proceeded to avoid me for the next 7 years.

You agreed to the $150.00 (the cost of the amplifier). Since you renegged on that
coontract, I therefor require that you pay additional fees amounting to in exces of
$400.00 for my time and toubles.

In case you don't remember, it was July 19th, 1993 at 4:26 P.M. at my residence of
9202 North 18th Ave (the carob tree apartments). We shook hands and you left me with an
empty envelope and broken agreement.

Since then, it has come to light that you have stolen from at least 2 cd radio shops here
in the valley over the course of the next 2 to 3 years (the roadrunner cb shop and the truck
stop cb shop on I-10 and 57th drive). The amounts of these thefts (and they were reported) was
over $3,000 (thats grand theft buddy!).

Need I also remind you of the fact that the FCC did inform you after a nasty incident back
in 1991 that you were in violation of various parts of the FCC rules and regulations and
were also charged with criminal endangerment after a bomb threat was called in to a nearby
school (the bomb in question was advertised as a radio controlled device) and you were on the air
running in excess of 3 KW at the time the incident ocurred... fortunately, the device was harles,
but you places innocent lives in jeopardy nonetheles.

To others in here that may consider having your radios worked on by Jack, perhaps
you should call a few of the folks he's ripped off over the years.... this should prove
very interesting indeed. is this the kind of person you want digging around inside your radio A person who cannot acquire more than a standard

ham ticket
and doesn't have license to work on commercial gear???).

Please jack, do explain all this away... I am sure there would be many who would be more than
curious.

as for your problem with me, pay me the money you owe me (basic cost of the amplifier plus
inflation for the last 7 years) and I'll go away, never to bother you again. You owe me money,
abd you need to exercise some fiscal responsibility and pay off the debt. this is all I ask.

OUCH,
I know what this is like. we had similar problems with a cb'er here in the phoenix

area back around 1993-1996 (the case of FCC v. Timothy harold Hoffman). As it happened, he used my callsign in more than one instance (he was also fixated on me

for reasons I have not yet been able to determine).

He was finally dealt with by the FCC and the bands here have become substantially quieter in the meantime (we only have the run-of-the-mill troublemakers to deal with
now).

I can understand why you would troll this particular person,
however (and I should ask this of myself with regards to another party here),
is there a better way to pursue this matter?

Just thought I'd place my 2 pennies worth in the conversation.

Clean your glasses, Leland... re-read the post and then tell me if you se
ANY form of sinister threat, implied or otherwise...

If you came in and tested, I'd serve you just as I would anyone else....
whether I knew it was you or not..... with a smile and some encouragement, I
might add, as well as a few tips on how to take the exam. There are
literally hundreds of Hams in the Detroit area whose license applications
and upgrades bear my signature.(especially Madison Hts... for some reason
they come to Mt Clemens for the exams.. probably because we do good work)
On the evening of restructuring, I signed over 130 licensing documents as
well as administering a large number of the exams. We were the 1st group to
offer EXAMS under restructuring... we started at the Midnite deadline and
ran till 4 am.
Join the crowd!

You suggested that I see what other hams are saying about testing.... and IMPLIED by inference that the FCC dumbed down the exams because of how those hams felt.

MY POINT was that ONLY 1-2% of the ham population even BOTHERED to write the FCC on restructuring, even though it was do-able on-line. If you do the research I suggested, reading the lists and comments pro & con, it's very quickly obvious that 'commercial' interest prevailed over Ham interest. Look it over, I mean it, I think you'll find it rather enlightening.

Good questions.

There is deliberate interference to communications during activations of the State Emergency Response Team as it communicates with the State Emergency Operations Center over a linked network. The same repeater is used for SKYWARN spotter reports, and jamming occurs during severe weather reports and when spotters encounter an auto accident, downed power line, or trees across a highway. The jammer also is very active in disrupting conversations where handicapped Amateurs or their families are involved. We don't know why any of these is singled out. During the past 24 months, a sheriffs department channel on 150 MHz has experienced similar problems which may be related.

Although the repeater is built of from commercial components and employs numerous protection measures against high temperatures and locked signals, it is not uncommon for there to be so much stress on the equipment that amplifiers fail. I would like to answer your question in more detail, but it would not be prudent to reveal exactly how the jammer circumvents the protection features and shortens the life of the equipment.

Suffice it to say, however, that even though nailing this guy has taken two years of intensive DF work, the results will be worth it. Incidently, during the tracking process, we uncovered several incidents of "copycat" jamming. Even though it was short lived in each case, it made it even more imperative that the main culprit be located and shut down. (Copycats are spotted by a combination of bearings which come from unusual directions and by TX-ID "fingerprinting" which shows previously undocumented transmitters participating in the jamming sessions.)

>called TVI filters. Also my SWRs are 1:1.........
> Somebody give me the solution "PLEASE" THANX

Overmodulation is the likely problem, and even a power mic that is turned up too far can cause splatter. Take the radio & mic to a shop and have it checked, or buy a peak-reading modulation meter.

A low-pass or TVI filter will work best if everything in front of it is properly grounded. You can do this by enclosing the radio, power supply and filter in a single metal cabinet (old breadboxes work great, and already have a dust cover). Add some ferrite to both ends of your coax, and make sure the connectors are clean and solid -- the coax is worthless if the connectors are cheap or poorly attached.

I would also recommend reducing your power, not just for the obvious legal reasons, but also because you will probably get a cleaner signal.

Sparky, FLRC

Is it me or does he sound somewhat like that guy on Americas Most Wanted.
Maybe they will give a TV show to him out of fear of the dreaded FCC

: Well said Fire228! In regards to the question about 10 over 9, the "standard"
: is that there are 3 dB to every S unit. So saying someone was 10 over 9 would
: mean that you are receiving 37 dB of signal. Since not all radios are
: callibrated properly as a previous post stated, it is really hard to assure
: that this "standard" is applicable to your radio.

The original specification was 6 dB per S unit. I dont' think it was ever adhered to very closely, and certainly is not now - on either Ham or CB receivers.

I have, however, used a calibrated test receiver in an anachoic chamber that was.

pddc,
The loop your talking about, if it's only a single loop,
it probably isn't doing much good. Several loops of about
the size you have should work 'better'.
If your getting into his '900'Mhz phone, I think he has
a problem in his house. Interfering with 900 Nhz just isn't
very likely! The rest, TV, VCR, whatever, is about 'normal'.
Most consumer electronics has no RFI protection built into it.
Convincing him that 'his' stuff is a fault is going to be a
problem.
You need to make sure your radio is clean, so use the low
pass filter, use a good ground, and offer advice to your
neighbor very nicely. If it turns into a confromtationj type
thing, you've lost the battle to start with...
'Doc

Seems as if you have done your part. Can I make a silly suggestion?
Power lines are the coupling medium in a lot of these cases. Do you share
a distribution transformer with the guy? Do you disturb anyone who is
close but not on your transformer? You have more than likely made the
ground rods part of the house electrical system and possibly have created
a ground loop. Check this out with a 'cheater' plug and separate the
ground systems. And for something really silly, try running on the
opposite side of the 240 service.

When you put the radials back, don't aim one at his house.

I don't hold out a lot of hope but we are getting desperate here.

Dick NBK

## 562. Help need mod for 75-805

Newsgroup: rec.radio.cb
Date: 2001-02-04 13:39:03 UTC
From: Steve Danhof <danhofsteve@home.com>
Message-ID: <XXcf6.279144$hD4.67412745@news1.rdc1.mi.home.com>
Source record: 72293
Cross-posted to: fido.cbradio,it.hobby.radio-cb,rec.radio.cb

Someone once told me there was a mod for the Midland 75-805 so that I could pick up frequencies other than CB freqs.. Has anyone heard of this before?

# 563. Re: RF in cab

Newsgroup: rec.radio.cb
Date: 2001-02-04 13:56:14 UTC

Message-ID: <3A7D5F7E.B38FF3E6@qnet.com>
Source record: 72364

Hello Steve: I have run into a few RFI (Radio Frequency Interference) problems and even a fixed a few.

Ok so the vehicle is getting hammered with RF Energy. The number one problem that I have seen is high SWR, or the coax is routed close to the vehicles instruments. But you said you had a good SWR. How is the SWR being measured. I would suggest a external type SWR Bridge, and not the internal swr reading in a radio. Are all the coax connector properly soldered, I have seen many problems with bad solder joints, especially with the shield connections.

Where is the antenna mounted on the vehicle? What type antenna is it?

How is the amp powered? Suggest you use 4 gauge wire or better (welding cable) from the battery terminals to the amp. Not just the positive wire, but both the positive and negative sides.

Is the amp grounded? I use a wire from the amps chassis to the vehicles chassis.

Installing a simple ground strap, from the vehicles fender to fire wall to hood is a cheap and easy thing to do that may help.

If all else looks ok, I would suggest having two .01 disc capacitors installed right the amps power wires, at the amp.

The Instrument Cluster in the van, will have a wire coming from the fuse box to the Instrument Cluster disconnect. It is possible to add a inline or series choke (wire wound on a snap together ferrite core, sold at Radio Shack) in the Instrument Clusters 12 volt wire just before it gets to the voltage regulator for the instruments. Also bypassing this wire with a .01 uF Disk capacitor will also help. But the Ford Instrument Clusters I have seen are pretty immune to RF Energy. This may indicate that there is a real problem with a lot of RF Energy being on the 12 volt system in the vehicle, probably coming from the amps power wires.

Let me know what you have there, I am sure the problem can be fixed so that you can hammer down and on.

Jay in the Great Mojave Desert, .....just down the road ah ways from the fillin station.

In the event that one of my children or myself were be serious medical trouble, I would not hesitate to use my "opened up" dual band ht to contact whomever I needed to. This means eminent possibility of death, not a broken bone or such injury. I seriously doubt the agency or the FCC would bother with prosecution. On the other hand, if they do, at least I will be alive to defend my actions.

Hello PDDC:

These neighbor Interference problems can be a real bear at times.

If your bare foot, than this indicates that the low level RF Energy from the your antenna is getting into the neighbor stuff. The A99 antennas are famous for this problem. I have heard and seen way to many interference problems being cured by replacing the A99 antenna with a MaCo V5/8, or old out of production Penetrator 500 or Sigma 2, 5/8 wavelength ground plane antennas.

It is possible that the neighbor electronics is at fault here. The manufactures don't design or install proper filtering into the products.

But the interference can be resolved. A independent TV and or Phone installation outfit can be brought in and look the installations over, and may add filters, new wiring, and even ground some of the neighbor systems. I found them in the phone book, even found a guy that was a ham and knew all the tricks and what to look for.

Here are some references for the interference problems.

http://www.arrl.org/catalog/index.php3?category=Interference%2FDF

Good luck, please let the ng know how you make out.

Your going to lose credibility that way, dumbo.

The Siltronix was legally sold as a multiband amplifier during its day, and
as such, can be resold today.

You just DON'T get it, do you?

You can't snitch on someone for doing something legal....

Hello. I am looking for a collector quality President Madison AM/SSB Base with the analog clock. I will buy the Uniden version with the digital clock, should you have one. Please, no modifications of any kind, including channel expansion, "peaking",slider/clarifier mods,roaches....basically, no screwdriver jockey radios. I have a large collection of vintage cb radios, and would like to have a MINT Madison on the shelf. Please E-mail me direct if you have a stock Madison, if there are any left out there. Thank you in advance!

Greetings!

Which brings up another good point, many foreign countries also visit
this NG.

It may be wise to understand the international consequences of
"spamming" and threatening legal action - where it doesn't apply.

It can backfire.

Thats why the whole mess with the "Legal versus Illegal" issue is
laughable. Crusades in one country are a point to note, but applying
the crusade to other countries not under such controls are another.

In case someone needs to brush up with old news, I do have a
rec.radio.cb FAQ at an URL [Hint: Aaron] and what it states there, is
what I abide by. Which I will Email this link at their request. It
should also be noted that it can be found under any search engine.

My business is none of your business. If there is something I can
provide an answer or two for, that is my business. What you do with
that information, is your business, not mine.

On Sun, 4 Feb 2001 11:23:19 -0500, while the modem was ice fishing
with the Mouse, "Paul" <pvanasse@mail.direcpc.com> dissertated the

Good info Jay, One thing I have found several times is the 100,000 mile rust proof paint they use make it hard to get a good ground for the shield of the coax at the ball. mount. If you try to use a wire brush in a drill, it gets shiny and looks like metal but it's still and insulator. Use a stone or sand paper to get down to the metal and make that ground good for the shield

In some cases, the RF makes it's way down the power wires of the transmitting station and into the house wiring. The house wiring becomes and antenna and radiates it to your next door neigbor. Try a couple of those clamp on ferrite chokes around the power wire that supplies your transmitter with power

Greetings!

Does the DX99 have a "swing" mod done?

The RF entry problem may be from several sources.

You say you have the box grounded to the seat. I recommend the frame at all costs and with the shortest route and braided jumper if possible.

As far as what else, let's see...

If that Galaxy is pushing some hard wattage, you said you're using a 5 pill - so low drive would work, but if you use "swing" mods to drive it, this may generate a second or third harmonic if the radio "overdrives" the input pill and the rest spills over into the other 4 it drives. Generating splatter that does get into the electronics.

It wouldn't hurt to go around the pickem-up truck and tighten bolts. Especially ones that mount the front dash lower truss to the sidewalls and frame. The electronics are grounded to the truss and have separate grounds to other locations by the sensors routed thru the firewall. If any ground wires are open, *wham!* instant antenna for RF problems. Improving the ground return from the sensors in relation to the computers own reference to ground helps with shielding extraneous noises.

Another possibility, the threshold of pain for the engine...

Meaning, the load the box puts on the engine can light up all of them pretty little lights instantly due to the load the alternator puts on the engine when it's at low idle. Many newer vehicles, to pass emissions, use an "Idle up" circuit to operate devices that can bog down the engine. What you may be seeing is this event, the engine bogs down, and the sensors are reporting the right info, only the vehicle can't engage the idle up solenoid or valve to allow the engine idle to speed up and compensate and the "christmas tree" event happens. Simply due to the "idle up" signal that would be present in other devices that tells the computer to raise the idle speed to compensate the load, isn't enabled and the thing gets confused.

Two ways to solve.

One, find the idle up feature and hook the box up in a fashion to make the engine see a load before the idle drops down due to the load the alt will place on the vehicle - or operate a device that makes the engine idle up [like the blower or running lights] and then use the

box.

Second, don't put too much RF-juice into the box from the 99 - and
this will allow the box to work linearly and not splatter and bog the
engine down from the extra loading the box places on the electrical
system.

Hope this helps...

On Sun, 4 Feb 2001 09:57:11 -0500 (EST), while the modem was ice
fishing with the Mouse, Limey007@webtv.net (Steve Rigby) dissertated

A "5-pill and a DX99 in the cab?"

There's your problem. You're running illegal CB gear, so naturally your karma stinks and you're getting RFI all over the place.

If you are using everyday coax the RF shielding is about 40(db)
i would suggest Times LMR 400 or 9913 coax.
The shielding on these cables is 90(db).The attenuation in (db/100')
is 0.7 and 0.8 respectively.
By the way, youre probably exposing yourself to dangerously high
levels of RF Radiation.
Stray RF Radiation may cause cataracts to form in your eyes.
Seeeeee u later.

Classic48,

I wouldn't get too excited: it's mostly a couple of agitators who get their jollies harassing CBers. Most of the *recent* busts have been hams who jam, use profanity, and otherwise break THEIR regulations.

However, (hoping not to sound like the agitators), there *ARE* some cases of crackdowns on export dealers who are selling illegal radios in the US. They *may* have hit some amp dealers--not sure about that. I think what is going on is that some "BIG" guns have drawn attention to themselves and *might* have gotten popped. One of the factors in this is that some CBers (truckers mostly) are operating well within the 10 meter band thus raising the ire of hams who have complained about this. Recently this also attracted the attention of ARRL who requested that hams monitor between 28.000 and 28.300 and report what they heard. I don't know what this may lead to. I did hear Riley Hollingsworth say at a public forum that he was very interested in this.

Lastly, I don't think it is a matter or *MORE* government control; rather, it's a return to enforcing the rules that have always existed due to complaints, not only from amateurs, but from the general public as well due to extremely high powered amps and stuff. This is also what led ex-President Clinton to sign into law the bill to allow local communities to enact ordinances that prohibit CB interference (the illegal kind) to TV's, etc. Local cops can now (if the city, for example, passes an ordinance) ticket a CBer if he's running "illegal" equipment. I am not too keen on that for my own reasons.

Who's kidding who? The Siltronix is being marketed in a CB newsgroup and paired with an illegal export CB. It is obviously intended for CB use. Playing semantic games doesn't change that fact.

Hi Gary,

Well, so far my proposal has had little positive response. (One guy reminds me that if we tested the illegal gear on the air we'd be illegal. He apparently has never heard of a dummy load). Oh well.

To The Other Fellas:

I'll have to talk it over with N8, but....what if we included HIM in the deal, i.e. for each keyclown item verifiably destroyed BOTH N8 and Voobner would stay off the NG for 24 hrs? Would that sweeten the pot?

"Karl Vesterling" <kjv@adelphia.net> wrote in message
news:tlse6.916$cm3.130596@news1.news.adelphia.net...
Voob is a typical socialist mentality. He thinks more of himself if he can get the attention of "big brother". Fact of the matter is that he's so desperate for attention that he blows stuff in that's totally legal.

Reminds me of the kid up the block who when he was 18 used to race his car up and down the street at 80MPH, but now that he has kids of his own, he yells at ya when you go past at 30MPH. Fact of the matter is that it's a 35MPH speed limit.

Yeah, he calls the cops too with the license plates and all... But, now they don't listen anymore. They had a car posted on the side road waiting for days for someone to go "speeding through the stop sign". Not a single one did...

He's just trying to get attention from big brother by pointing the finger.

I have a finger to point at voob, but I prefer to point it vertical with the back side of my hand to him. If he was Japanese I'd show him my armpit and say that he stinks, is stupid, and has no honor. If he was Italian, I'd be sure to take 3 fingers and put them on my chin while looking at him. If he was English I'd piss in his beer.

But, he's none of those, he's a "fierce nordic viking"... So, I'll just fart in his general direction and let him cut himself on his own sword.

Funny... I wasn't aware that Vikings had family crests. I'm not aware of any barbarians that took the time to make family crests. So something tells me his family's gene pool had crested a long time ago. Must've been that fierce lack of light during the dark ages causing a Vitamin D deficiency. Which probably explains why the voobner skin is so thin. Not good for that northerly cold climate. Probably why they moved to the states.

I was better, but I got over it.

Source record: 72388

His is not the only repeater experiencing this. We have a wide area repeater here in NC that gets this from time to time--it seems to be a magnet for idiots who have nothing better to do than jam or ker-chunk repeaters. Some of them got popped by FCC (see "Mauney" in letters section of RainReport). There is another local repeater that is experiencing jamming now. He WILL be found; it sometimes takes patience, and results also depend on the amount of equipment available. This piece of trash also jams nets, SKYWARN, RACES, and other emergency communications as well as the usual QSOs--especially in the early morning.

Mr. Dowers, by your question as to what emergency communications was the guy jamming, you *seem* to imply that it is OK to disrupt "other" types of communications. No flame or challenge meant--it just came across that way. The only thing I will say is that it is NOT OK to jam ANY form of legal communications, those sons of bitches have NO right to be there, and when this happens locally, I will be one of the first ones out with DF equipment to help get his ass busted, and I don't care if the person being jammed is just asking her husband to bring home bread. I'll still be there to help pop the bastard!

OTH, lots of times when we have jammers, the control op will simply drop the machine out from under him. If he still continues, we just continue to DF him. We have a "network" of stations with VHF beams.
Without saying anything to anyone, when we hear someone playing music, making unidentified remarks, jamming, we go to the input side of the repeater, and turn the beam around for a heading (if he is close enough to be heard direct). Once we have a beam heading, we draw it on a map, then call one or more hams on the phone and get them to take a heading as well. Each one will take several plots to see if it is stationary or mobile. Then we meet at a prearranged place and plot our headings on a single map. Where those lines cross is the "general" location of the offending signal. Then, if the signal is still present, we go to the indicated area and begin to DF close-in. We may or may not contact the person, and they may never know what happened until the plain Dodge with US Government plates pulls in the drive! Hee! Hee! Foxhunts are FUN!

HA!

Naw, ham radio is far from dead. I am 53 years old and been in radio since I was 16 years old--actually more if you count when I was 9 and listening to ham/shortwave on my Dad's old Philco radio. Sure, I am a ham, but I enjoy other kinds of radio as well--includes CB. I must honestly say that, while I constantly learned about radio thru out all those years, ham radio has taught me more than most any other realm about electronics. You see, ham radio is so broad in scope and has so many FORMS of communications that it far outstrips CB in the educa-tion area. That's not a slam. For me, I spend as much time tinkering in the shop building projects I learned about thru ham radio as I do talking--maybe more! That's one of the things that keeps my interest in ham radio! It's the LEARNING that excites me.

As to the age thing, you will find hams in all ages from 6 years old up thru 100. And just remember this: you won't be young forever. Trust me, those years will pass so fast you won't know what happened. It's not about age; it's about having FUN!

Yes.

> and
> IMPLIED by inference that the FCC dumbed down the exams because of how
> those hams felt.

I implied nothing of that sort. Make no mistake, there are two issues with the exams. Number one is the open verses closed question pool issue. Second, the technical level of the questions themselves. The debate almost always gets confusing when the two issues are intermingled in the debate, which seems to happen regularly.

> MY POINT was that ONLY 1-2% of the ham population even BOTHERED to wite

> Look it over, I mean it, I think you'll find it rather enlightening.

I don't doubt that commercial interests had something to do with restructuring, but that was not the subject we discussing last if memory serves. Namely the written exams.

Funny you should mention "sinister" and "threat". I would like you to point out where I accused you of doing so. What I would like to know is why you found it necessary to mention that I may have been in one of your VE sessions, and why it would have any remote relevancy to the topic being discussed between you and Richard. I sounded to me like you would have a "problem" if I chose to show up at one of your sessions, and why that would be the case.

Somebody wrote a whole book about these great radios, and I believe there is a place which restores them. If I run across it, I will forward it. Talk Radio host Bruce Williams bought one which had been restored. Visit his web site and send an inquiry about where he found it.

Meanwhile, it sounds like the filter capacititors in the power supply have gone bad with age. It is a simple and inexpensive fix. Bad capacititors would produce exactly the effect you describe. This is NOT characteristic of problems with IF filters.

>would not hesitate to use my "opened up" dual band ht to contact whomever I
>needed
>to.

Cool. Nobody could blame you for that, provided:
*You didn't choose a law enforcement frequency over an Amateur frequency.
*You didn't have a cell phone sitting on the seat of the car.
*You didn't have access to a landline.
*When the emergency was handled, you stopped transmitting.

> I
>seriously doubt the agency or the FCC would bother with prosecution.

Doubt away, but that's the track record they have. Why do people have a problem understanding this? It seems like a pretty simple concept. Just because there is an emergency is not, in itself, authorization to do whatever you wish.

Try every other means available, first. Otherwise, you can kiss that "opened up" HT goodbye, based on past FCC decisions.

Yrac

FYI: from Yahoo's e-group "CB" category page:

"Please note that the discussion of illegal CB operation could violate
the TOS of your ISP, if your service forbids discussion of criminal
behavior"

So it appears that "criminal discussion" may not be protected by Free
Speech. Interesting.

## 638. Why Voobner is here

Newsgroup: rec.radio.cb
Date: 2001-02-04 22:57:32 UTC
From: h <not@aol.com>
Message-ID: <t7rndsf1vi8d69@corp.supernews.com>
Source record: 72219

He is jealous. You see all his Ham buddies died off of old age. He has thousands of dollars of Ham gear and no one to talk to. He hates the fact that illegal CB is thriving and Ham is dying. rec.radio.cb is one of the most POPULAR groups around.
He also hates that the FCC deletes ALL his e-mail. The bill that transfers enforcement to local cops is an admittance by the FCC that they want NOTHING to do with CB's...EVER! Check the ARRL web site under enforcement..not one CB bust at ALL!!!
It must be frustrating to hear NOTHING but static on his Ham gear knowing that the party is at 10 meters.

WE WON!

Yep, they NEED to crack down (eliminate) Coward Stern, and ALL the major media for pouring their FILTH and TRASH into the country since the 60's and before on 52-890mc DevilVision communist brainwashing (Remember Elia Kazan?). Then AM/FM needs to be cleaned up too. Filth IS NOT "protected" by the 1st Amendment. If the 6th plank of the communist manifesto says "Govt. control of communications & transportation," then I say that a communist govt. is permitting the Hollywood communists to spread their TRASH, while the controllers go after a few bad Hambos & CB'ers! Does this make sence? Dem pinkos hate "The Little Man." !!!
Dave!!!!!!!

"h" <not@aol.com> wrote in message news:t7rmmg1sn064db@corp.supernews.com...
The FCC would never let local law enforce their regulations if they had the means to crack down on illegal CB. Hell they couldn't even handle Howard Stern.

Message-ID: <t7roq3d4s6kt31@corp.supernews.com>
Source record: 72225

Don't let the latest Bill fool ya. HR2510 or whatever is a full surrender by
the FCC to the freedom loving FREEBANDERS! The intent is REALLY to transfer
ALL enforcement to Local cops to respond to rf interference by base stations
with big visible antennas(ya know the kind that Hams have:))
Local guys have REAL LAWS to enforce and won't bother us.
Here is the real deal. Ya go down a street with an 8-pill keying up and
taking names. Everyone's pay-per-view goes nuts and some old guy with a
pacemaker croaks from rf. Your gone and the cops come and who are they gonna
arrest? The dumb Ham with his big antenna and thousands of dollars of equip
cause it MUST be his stuff doing it.

"Polehead" <polehead@aol.comgfek> wrote in message
news:20010118105019.17000.00000006@ng-df1.aol.com...

UNIDEN CB RADIOS - All uniden has done in the past decade to their
CB's
is look at what Cobra is doing cosmetically & copy them...They made the
Grant
into the Grant XL, only difference, The faceplate was changed to look just
like
a Cobra 148! The new Grant LT, only difference, The faceplate & mic jack
was
changed/moved & extra "DSC" knob added to front to be more like a Cobra
148NWSTracker!...ditto with PC 76/78, 66/68........shame on Uniden for not
having more originality to back up their fine radios....What Corporate Duck
brain thought up these "me too" moves??

You are obviously NOT a tech ! The DSC is the BEST feature in 30
years! It actually sets the squelch automatically, instead of Cobra's
alleged "scam tracker" which does NOTHING.

GALAXY 959/TEXAS RANGER CB - These may be the finest "approved"
CB
sets out there, they tune up to "export" power, but why not use a chip
that
would easily give standard banks of channels?? Cheap midland, Maxon & other
"approved" CB's have them, yet with these rigs you end up with a 148 style
"switch/chart" mod, or need to hunt down a drifty "viagra" add on
board........Wake up people!!

YOU wake up! 959 is JUNK ! It doesn't do export power either.

COBRA - Why did they abandon all base stations?? When are they
going
to give us a more compact SSB set, a good looking base, or a COBRA 10M or 2M
rig........????

With so much JUNK comming out of China, you ain't gonna see anything
like they did in the past. ALL cobra's current models CB's are JUNK now.
ALL of them! Any you want them to make a JUNK base too? If you were a CB
shop, you'd understand WHY they don't. Last winter I sold 0 bases. This
winter so far also. Is anyone selling bases? Winter IS base station
season. NO ONE is buying them.

Well damn it, ya got me curious! I went out to the shop and got the
amp and cleaned the crud and dust off of it and it isn't discolored.
I posted a picture of it clean in the alt.binaries.radio.scanner
newsgroup under the title: Amp top after cleaning out dirt.
This thing was kicking around the old guys pawn shop for years and
it collected a fine bunch of crud and dust on it. :-)

William

<Dave> You are obviously NOT a tech ! The DSC is the BEST feature in 30 years! It actually sets the squelch automatically, instead of Cobra's alleged "scam tracker" which does NOTHING.

*** I'm no fan of Soundtracker, but DSC would have never appeared on a Uniden CB if Cobra didn't do soundtracker, & the rest & bulk of what I mentioned about Uniden is still all valid. Also I & many others could care less about an "automatic squelch button, when shooting distant stations the squelch is left off, & when talking local it's ALL the way up. Many pros only use squelch like this & DSC does neither. DSC seems to be a geat feature for a $49 CB that a 17 year old wants from Wal-Mart or K-mart.

GALAXY 959/TEXAS RANGER CB - These may be the finest "approved" CB sets out there, they tune up to "export" power, but why not use a chip thatwould easily give standard banks of channels?? Cheap midland, Maxon & other "approved" CB's have them, yet with these rigs you end up with a 148 style
"switch/chart" mod, or need to hunt down a drifty "viagra" add onboard.....Wake up people!!
<Dave> YOU wake up! 959 is JUNK ! It doesn't do export power either.

----- Apparently You aren't a Tech. The 959 board is essentially the ranger RG-99 export board with the 2nd final & FM missing. I have both added the 2nd final, which isn't really needed, & have been able to achive with just the single final 25-30W swings on a "Dosey or PDC" type meter, & over 40W on a real Bird powered peak reading meter, both with ANYWHERE from 1-10W carrier. Also you don't need "uneconomical" major surgury to do this. So have the people over at Panther, Bill's 2-way, Express, Galaxy & others...check the web & try some of the mods.....you'll find what you don't know now.....

> COBRA - Why did they abandon all base stations?? When are they going to give us a more compact SSB set, a good looking base, or a COBRA 10M or 2Mrig.....????

DAVE-** With so much JUNK comming out of China, you ain't gonna see anything
like they did in the past. ALL cobra's current models CB's are JUNK now. ALL of them! Any you want them to make a JUNK base too? If you were a CB shop, you'd understand WHY they don't. Last winter I sold 0 bases. This winter so far also. Is anyone selling bases? Winter IS base station season. NO ONE is buying them.

--- Did you mention that there AREN't Any to buy? That is my point. I'm sure you must have sold some base stations in the last 15 years, Bases stopped selling when & because Cobra stopped offering them. I'm no fan of chinese made stuff, but It's going to have to be Cobra, because they are the oly CB company with any originality. If cobra came out with a clone of the 2000, Chinese internal board or not, it would sell every unit they imported. <Excluding modified Ham rigs/exports> Uniden has only sold the same 1 Tired base (Washington) for over 15 years, & they could easily make Madisons, Zak T's & others.....Midland dosen't have any, & Ranger mAKES 1 HIGH END model, & a copy/clone of the old Cobra 93WX AM..but they don't even Advertize or have the maket inpact of Cobra/Uniden. I'll bet you would have sold a few this year if you had a shelf or showcase w/ a half dozen bases that looked like a 2000, Madison, Zak T, etc....

Real Radios Glow In The Dark. (grin)

Keep the group posted on how you make out with the Zenith. A lot of us "cut out teeth" listening to short wave broadcasts on the Trans-Oceanic. And it was featured in an episode of Father Knows Best in the early days of television. The son, Bud, picks up a distress call from a ship and the father (played by Robert Young) helps him contact the Coast Guard.

Good advice! Who'd have thought those things would endure this many years!

QRM
---
Things I liked but never owned:
Zenith Trans-Oceanic.....
A Chevy built in 55, 56, or 57.......
The Collins "S" Line........

Things I owned and wish I still had:
4-ft tall all-band Silvertone radio with Magic Eye tuning indicator.....
An all metal typewriter with a long carriage....
Certain toys I played with as a child (and which I now see in antique stores at outrageous prices.....
An intact (working) crank telephone......
Custom-built Checker with 350-V8 engine......
Galaxy Saturn Turbo.....(used on 10 Meters, of course)

Things collecting dust in the attic:
An original Model-T spark coil which will knock you across the room.....
A padlock from the 1800s.....
A glass bank marked ESSO, containing about one hundred 1943 steel pennies. (Bank probably worth more than the pennies).....
The ugliest vase you have ever seen, but it was a wedding gift given to my grandmother, and my sister won't let me throw it out.....(I notice SHE doesn't want it at HER house--grin).....And.....
My fourth-grade report card, which indicates that QRM "shows a lot of potential if he would quit talking in class and apply himself". (Today, this would be diagnosed as ADD and we'd consider force-feeding Ritalin).

My point exactly. Such technical discussion by those who do have a few clues is healthy. Unfortunately Goober & Co. are incapable of understanding basic principles and should refrain from using terminology which they are mimicking parrot fashion. Fire228 said there was 37dB of signal...37dB what??? 37dBWatts 37dBAmps 37dBVolts...you have to specify. The calibrated radio is only part of the picture chummy there is heaps more to this.

Bill Nelson wrote in message <95it41$25f$5@bashir.peak.org>...

No Mr. Voobner, That is a group of guys that all talk to one another and have fun! They don't spend their every waking moment crying about illegal issues. Especially those of illegal cb radio. I think it is kinda sad that you spend SO much time on this group ranting and raving about illegal use that you can't even enjoy your own hobby, Ham Radio. Tell ya what, every time i'm out on the radio the last thing i'm thinking about is some yo yo ham operator conducting illegal activity. I just get out there and enjoy the hobby. Well anyway. Take it easy voobs.

Hey Tim,

What do you think of my proposal for a keyclown equipment
turn-in program? (See thread "Stop Voobner From Posting")

It would mean a lot if YOU got the ball rolling by sending in some of
your illegal CB gear. I bet others would follow your example.

Also I still plan to go to Dayton. If we can get enough illegal amps and
export radios turned in, we could set up a room where CBers and hams
could pay $4 to see N8WWM smash the stuff up with a sledgehammer. We
could donate the proceeds of the door (and the video) to charity.

N8 is willing. Plus, Sparky has volunteered to recycle the scrap
components for use in a basic electronics class for inner-city kids.

Together we could do something good. Whaddya say?

The hum has nothing to do with the IF's, it is caused by defective filter capacitors. You can get plenty of advice on this on the rec.antiques.radio+phono group. Do you know what model it is?

WRONG!! under the bill that was just passed and signed into law exempts licensed station, which includes hams. Problem is local government will see this as another way of making money. Local cop sees a antenna on a car and decides to stop it for what he says was a minor traffic violation. While stopped just happens to notice a suspicious radio and check equipment. It happens to be hooked to an amp and he request to see your FCC license. You don't produce it and you lose equipment and a good bundle of money.
Your recourse? You appeal to the FCC. Good luck. The law stinks but it is designed so as to act as a money maker for local governments. Do you really think they will pass up a chance to make some extra money?

HR2510 was concocted by a number of powerful politicians (Feingold, Dingle, undoubtedly with a lot of help by Billy Tauzin the grand poobah of the House Committee that is in charge of the FCC) to allow the local mayors to solve their constituent's problem with hi-power AM operation by local freebanders and channel masters. It is aimed right between the eyes of freebanders. Truckers are exempt without probable cause, licensed services are exempt period.

Given the political heat on the issue, the FCC sat back and said Yassah Boss. They are to help and provide technical data. Any conspiracy is in your mind.

You are, of course, correct that mobiles are a bit harder to find. If you are of the ilk that runs splatter boxes mobile, the odds are the politzia know you from your driving habits.

It will take a while to write the ordinances and arrange with the local judges to agree on standards of evidence. It is a fair bet that there is a brown-list of locals already which will take some time to work thru. So no, you are not in immediate danger. But accidents happen.

Dick

Does that one have a 1L6 tube in it? I had a TO baxk when I was a kid
and the 1L6 kept burning out on me. Good luck with it, they're a
great old radio and a fine example from early America radio tech.

Just a word of caution. Do not remove or insert any of the tubes with power on or you probably will blow the filaments of one or more. The 1L6 in this set is scarce and will run you $30+ if you have to find another one. All of the capacitors should be replaced, the chassis is very crowded and can be difficult to work on and should be done by someone with experience with these sets. After capacitor replacement an alignment should bring it up to it's former glory.

You mean 54-88 MHz (channels 2 to 6), 174-216 MHz (channels 7 to 13),
470-890 MHz (channels 14 to 83). However 806-890 MHz (channels 70 to 83)
formerly allocated to television broadcasting, are now allocated for cell
phone use and land mobile services. Operation , on a secondary basis, of
some television translators may continue on these frequencies however.

Hiya people

Just wondering if anyone out there has or knows someone that has a users / owners manual for one of these model HF radios.
My parents have just purchased one and have some documentation, but would like to try and chase up a manual - probably difficult given the age of the unit.

Any help appreciated
Cheers
Owen

Hello Mad Dog: Yes this is a real possibility. If the antenna is
mounted this way there the SWR may be higher than what he has measured.

I have trouble shot many antenna systems, and sometime it very hard to
get things fixed even when your there. And its a hundred times harder
trying to help from the e-mail side of the fence, since all you know is
what the guy has told you.

I for one love the Bill. In the county where I live all the local cops have CBs with big amps. The local CBers have very good relations with the police. They have helped the police in finding lost or runaway children. There are about 50 CBers in one local group that the police stop buy there hang out on a regular bases to shoot the shit, let the group know who and what they are looking for and to find out what is new in the high power CB world. All the CBers in our town know the rules about where and when to key there big amps. Any one cought keying in places that are no key zones (banks, hospitals Shopping centers ext.....) are cast out of the local group and there equipment is distroyed buy the group. You say if it was me I would go to the police. They can't the police know the No key zone rules and will do nothing to help the rule breakers. If the police are having a problem with a high power CBer they come to us and we deal with it. In our town it is nice to get ont the CB and call for the police and have an officer come back to you with that powerful radio they run and get help when needed. If everyone would use a little comman sence when running there high power radios they will have no problems like us

from a ten year high power freebander and loving it

Source record: 72333

>A new breed of "outlaw" CBer came along recently: folks with no respect
>for any one or any law. Folks who think they have a "right" to operate
>illegal CB and not be criticized for it. These "anything goes" people
>took over the CB band from the fine folks who were there for decades,
>and in many cases forced them off the air.

AMEN! I just read another post which said that in the Poster's town, they "deal" swiftly and personally with the folks who abuse the CB channels. Decent CBers everywhere are starting to speak up. In reminds me of the Western movies where the citizens decide to take back their town from the outlaw gangs. Sing another chorus of "High Noon".

>The reason there are 5,000 watt amps on your local CB channels is
>because people tolerate it. No one dares complain. Everyone minds
>their own business. No one wants to get involved. The idiots get
>"respect" -- so they proliferate.
>

Oddly enough, the Bible contains a great forumla for dealing with CBers who are screwing up the airwaves for everyone else. The steps are:

(1) Approach the person privately and point out the problem. Ask politely that they change what they're doing.

(2) If that does not work, return with two or three others, so that the request is confirmed by witnesses.

(3) If the person still won't comply, cut his coax and smash his radio.....Opps! That wasn't the Bible. Sorry, Folks. I picked up the CB Handbook by mistake. Let me check Matthew 18:15. I'll come back with the correct text later!

Well, well, well, DOugie has run out of steam. He is now using new names almost routinely...this is in direct response to the multi-paragraph explaining his deficits, and quite well. His thinking has not only deteriorated to self worship and paranoia, but also the "legend in his own mind factor" that is so prevalent among cbers that no one will talk to. Resident alter ego/shaky boy N8WWM has demonstrated a rather consistent pattern of immediately attacking anyone that makes fun of his alter ego..hahahahahahah! He knows who has beat and pistol whipped him into submission like no other can. Proof is in the posting. Alas, his last sad, desperate, gimped pathetic, attempt at malcontent failed miserably. I have reduced Dougie, (although I wish I could say single-handedly, I cannot, for credit is due a few others, you know who you are) to a simple sniveling blob of mindless matter, who has nothing left in the way of creativity or originality, whose envy of me and other ops in here is so great, and wants nothing more in this world than to be like me and a few others, self admitted and evidenced by his assuming of our nics, right down to the unique spellings. He realizes we are superior and he is defeated and humiliated, therefore, it gives him some inner sanctum-type retribution and self gratification, albeit very minor, to fantasize about being one other than the person he really is. It is my pleasure to relegate this has-been back to the killfile where I originally retrieved him from, along with his aliases. A hunter has no need to unload more rounds after his prey has been tagged, bagged, and stuffed..in this instant, the twisted deja moniker shall serve as my trophy just fine. His usefulness as target for making him roll and frolic in refuse is now an old laugh, one can only kick a large animal so many times in the head before it stutters and dies, and he no longer amuses me. Oh well, thanks to Deja, I can always view my huge, big, large-game trophy for eternity. Free fertilizer mulch while it lasts!

I liked "Cat Balloo" (circa 1965). It was a spoof of Have Gun Will Travel. The
plot:
*Girl inherits ranch.
*Bad guys try to steal the ranch from her.
*Girl hires gunfighter.
*Gunfighter arrives on stagecoach. Drunk as a skunk.
*Hired hand draws large target on side of barn, and hands gunfighter a pistol.
*Gunfigher fires pistol and nails the weather vane on the roof.
*Hired hand exclaims, "He did it! He missed the broad side of a barn!"

Vigilantism isn't it wonderful, we ignore the Constitution, trample on
people's
rights and carry out our own laws. Carnivore now knows your town thanks
to you.

> In our town it is nice to get ont the CB and call for the police
> and have an officer come back to you with that powerful radio they run and get
> help when needed.

Gee, we don't even need 911 or a cell phone!

> If everyone would use a little comman sence when running
> there high power radios they will have no problems like us

The words "comman sence" are spelled "common sense" and I wonder who
really has true wisdom. And your right, and I quote, "they will have
no problems like us" since the HB2346 can now be adopted by any STATE
or local gov't, too bad the good ops have to pay for the fools.

> from a ten year high power freebander and loving it

Enjoy it while it lasts,

Andrew,

Now that I think about it, after looking at some of your
pseudo-technical ramblings, you ought to just shut up and
listen for a while.

You wrote:

My point exactly. Such technical discussion by those who do have a
few clues is healthy. Unfortunately Goober & Co. are incapable of
understanding basic principles and should refrain from using terminology
which they are mimicking parrot fashion. <snip> what??? 37dBWatts
37dBAmps 37dBVolts...you have to specify. The calibrated radio is only
part of the picture chummy there is heaps more to this.

(Yeah, heaps more that you obviously don't know anything about either)

37dBWatts
37dBAmps
37dBVolts

What the hell are these? I sincerely hope that your utterance
of these bogus/meaningless terms were not intended to give us the
impression that you posess a single clue, much less a few.

Greetings!

Andrew, welcome to rec.radio.cb.

Our topics of discussion as of late have been nit-picky.

However, you've brought up a good point to reference back to what this NG really should be all about.

Improving that S-meter reading - if it matters anymore.

Usually, from the factory, and it does depend a lot of which brand you buy, the radio line is set up to receive a given uV reading at the antenna input to correlate back to an S-meter reading to give an approximate, and I do emphasize that, *approximate* reading relative to the conditions and distance from the station you're receiving.

This uV measurement on many CB's, is 100uV to give a S-9 or 9 on the typical CB radio. This is a supposed "standard" to where AGC voltage will still be applied at full potential to the RF Amp stages. Once the uV reading goes higher, the AGC voltage starts to change.

This prevents radios from overloading the RF amp stages, by using the AGC voltage and changing the amount of voltage applied, to reduce the gain in these stages. Keeps the signal cleaner and helps reduce distortion products produced when the input signal to a stage exceeds the engineers design specs.

Anything under the 100uV reading, takes into consideration the engineers ability to handle the weakest signal buried in the noise. In certain States, this information may not apply to you.

The actual noise floor in any given brand of radio varies, and even within the same line - a quality control issue. Do not apply to broken skin or other open wounds.

As far as S-meter changes, the rest of the group has been set anywhere between 3dB change in signal level, to about 6dB change. This signal level is based upon W/V/m^2 and is proportional to the square of the distance traveled. Terms and conditions apply, see dealer for details. Location, conductivity, losses, local conditions, all apply to affect S-meter operation. Offer void where otherwise restricted. Warranty is void if any of the above conditions and statements are not adhered to. Limited liability, limited to replacement or repair or refund at our discretion.

As far as how they obtain this initial level, this knowledge is probably locked in a safe somewhere in a toothpaste factory and one

half of the equation is known only to one engineer, with the other half needed to make the entire equation, embedded in a microchip left in the brain of a CEO somewhere on the other side of this planet. Magnetic Media, do not X-ray.

On a serious note, the initial noise level with no signal applied, is considered the starting point for the engineers to work with. You can call this the 0dB mark, and is referenced to logarithmic equation as the signal to noise ratio. How linearly this operates is a personal character of the engineer, and not directly related to how you feel, or the temperature of the surface of the sun - although some days you may experience nausea, headache, rash, irritability, itching or engage in delirious effects caused by it. If conditions persist, discontinue use.

Another aspect of this S-meter - too many people are focusing on the red side of the meter. Although, a good way to go, you might wind up going too far in the red on adjacent channels - ruining a good QSO on the other channel. Available only for approved use, any other use not consistent with labeling is a direct violation of EPA, ASPCA, AT&T, ITT, Intel, Apple, and Bill Gates.

If you've been in CB radio, you know just how a CB radio can operate attempting to receive a weak signal in these conditions. It's not fun but, many inherent problems associated with cheap filtering can be overcome by starting out using a good quality radio. You avoid the poor filtering and inherent noise problems otherwise associated with "bare-bones" circuit designs by using a higher quality radio - the added bias and associated support components are there to reduce the unwanted artifacts. Do not feed the animals - otherwise you'll be their lunch tomorrow.

The "S-9" reading is mainly meant for "full-quieting" where the receiver is not having to engage all it's noise abatement circuitry in order to hear an incoming signal. This is what the engineer wants to accomplish in the circuit design. The rest of the task to get to this point relies on the operator - signal to noise ratio, the better the ratio, the lower the noise, or better signal reports. Cannot be held responsible for articles or clothing left behind.

This task can be, using an amp, or using a better antenna or a wide array of different methods and snake-charms to get you to think you're at the peak level of performance. Keeping it simple, keeps it simple and works every time. Use only as directed!

What it boils down to...
Use good quality radio, along with good quality equipment and hardware, you can then attain, and maintain, the peak level of performance.

This post is done to simply keep myself occupied, if you can use any of the information above, please feel free to do so.

Enjoy!

Call sign plates are available, usually only for a one-time set-up charge
above a regular plate, in every state in the union. Glad you appreciate
them.

Drop me an e-mail and I will be happy to give you my DXCC (Century Club)
needs in case you work something really rare in my name so I can QSL.
That funny character is a zero btw.

Subject: Illegal CB Recycling Program

Dear Sirs,

I am writing to ask your company to make an equipment donation to a charitable cause. Ours is a very unique program, so allow me to explain briefly.

We plan to collect, destroy, and recycle illegal CB gear.

Specifically, we seek RF power amplifers designed for CB use, and so-called "export radios" that are easily modified for use on unauthorized fequencies. At our demolition center in Toledo, Ohio, the contraband equipment can be safely and quickly reduced to non-working order. Your assurance that the equipment IS destroyed and not resold will be accomplished by a verification comittee made up of concerned CBers and Amateurs.

The resulting components will be available for use in basic electronics courses and career training classes administered by adult education programs, trade schools, and community programs serving underprivileged or inner city youth.

Since your company deals primarily in the distribution/sale of illegal CB equipment such as linear amplifiers and so-called "export radios" that clearly violate federal regulations, we assume that you will be available to make a contribution as outlined above.

Please contact me via email at your earliest convenience for details.

Sincerely,
Aaron H.Voobner

As both a ham and a CBer, let me explain the biggest threat to amateur radio in the U.S. - and it's hardly outlaw CB on Galaxy radios creeping into the 10-meter ham band.
Here in central North Carolina, it seems everyone other ham on two meters is at least 70 years old. As in DYING in a few years. If this is typical of ham radio, ham radio will DIE OUT - whatever the outlaw-CB people do.

Try using my call on HF! I'm sure that should get you noticed when they look
it up in the call book. Yes it's on my license plate too.

Hey Voob, I think it is legit. I know most CB dealers that I have talked to think CBers are morons. They wouldnt have the time of day for them unless they were supplying the cattle raping idiots with their pecker extensions<linears>. I can name 3 or 4 dealers that think the CB crowd is the dumbest bunch of second rate Bevis and Butthead imitators they have ever seen.
I'll tell ya a true story, witnessed with my own eyes: A CB dickhead idiot bought an export rig at a Chicago area dealer last year. He came back about 30 minutes later and he was HOT! When he calmed down enough to tell them what he was so pissed over he told them "You sold me a piece of shit! I want my money back! This motherfucker don't swing a goddamn bit on FM!!"
Bunch of the dumbest son of a bitches I have ever seen and they prove it every day on this NG.

# 748. Re: Straight from the FCC (Game Over)

Newsgroup: rec.radio.cb
Date: 2001-02-05 23:01:50 UTC
From: Jerry Oxendine <joxendi@bellsouth.net>
Message-ID: <3A7F30DE.2E@bellsouth.net>
Source record: 72476

Yrac,

But we don't DF the output of the repeater--we DF the INPUT. If the repeater pair is 145.35/144.75, we listen to 144.75, the frequency on which the bootlegger is transmitting. Mt. Mitchell is 75 miles from me, and the people in the Asheville/Buncombe County area will attend to that one. Ours is in Dallas, NC on a 2000 foot tower at the 1500 ft. level. This is the one that gets some of the jerks. We locals assist the control op in hunting down "keyers". We slipped up on one fellow sitting in his truck a few years ago and WATCHED him playing music from the car radio over his 2 meter radio! Being nighttime, we walked almost up to the door of the truck before he saw us. He almost jumped thru the metal roof! Oh, how he began to apologize and beg us not to turn him in to FCC (didn't work!). He received a warning letter, straightened up his act, and actually became a decent operator after that! Not too long ago, the machine stayed keyed up, alternately timing out and coming back on. We could hear voices in the background faintly. We obtained beam headings, compared them, and set out to the area of the offending signal. As we narrowed it down to one house, when one of the mobiles drove right in front, the signal disappeared, and a man motioned one of the hams to stop. Seems he himself was a ham. He had been upstairs asleep and his mother in law, who liked to listen to his radios, went into the shack and turned on his VHF rig. In the process, she accidentally hit a button on the front of the rig and accidentally activated the transmitter. Mr. XXXX was awakened by all the unusual traffic on his dead end road and came down to see what was up. He glanced into his shack as he came down the stairs and saw that his 2 meter was keyed up. He was plainly heard to say, "OH MY GOSH"! just before the signal went off the air. Some of these incidents aren't intentional. LOL! However, it SHOULD serve as a warning to the unlearned that they CAN be found--even with simple tools. And I wouldn't go around "pirating" someone else's callsign, either. That's been done around here as well. Didn't last too long because the real call holder got notified quickly, the ham community took an active interest, and so did FCC. It really ain't worth it.

As an aside, a number of years ago, a bootlegger took to getting on a repeater and making obscene remarks both to and about a ham's XYL who also was licensed. Without saying a word, the ham and his friends quietly DF'ed the man and went to his house. He then initiated a "conversation" with the illegal twerp who promptly began to hurl obscenities about the XYL. The ham, about 6'3', 240 lbs, then rushed the fellow's house, pulled him outside and whupped the living dog sh** out of the man! There was no more interference or obscenity. Not exactly the correct way, but it was sure as hell effective!

Jerry

KEYCLOWNS AINT US, Inc.

Memo
To: Aaron Voobner, Co-President
From: N8WWM, Co-President, best flamer in NG, and legal operator.
Subject: Recycling operation status report...

Voob...I got the 25 pound maul ready to drop on some more of that ILLEGAL FAGGOT KEYCLOWN EQUIPMENT AS FAST AS IT STARTS FLOWING. I hope my wife can drive a forklift, cuz we will need it in order to get all the crates of stuff to the new pre-destruction warehouse faster than I can smash 'em!

By the way, Do you know where the keys went to the hydraulic compactor's apparatus room? Can't find 'em anywhere. We are starting to pile up on the far end of the warehouse. The stuff has all been de-keyclowned, but I want to get it packed up for our inner city schools quickly. If we can't run the compactor I am gonna have a big pile of chassis sitting here after they are stripped out.

Also, that medical amplifier company that needs the 70,000 2SC2879's will get the order filled this week. I am de-keyclowning a bunch of train-built amps right now, and the demo crew wants to work OT on the job. I quoted the customer 75 cents each for the 2879's...is that OK with you?

There's an outfit that wants to couple the power mike and toy circuit boards to ultrasonic detectors and sell them as early warning systems for the blind. We need to look into this quickly. I understand the Helen Keller Foundation is willing to finance a factory for us to do the work and take 3 cents off the price of each unit to amortize the loan. Dude, we are gonna be rich!!! Authorize payroll to include an extra 250 bucks in each crew members check for the next 3 months. We got it, so let's share it. Afterall, it aint like the FAGGOT ILLEGAL KEYCLOWNS can do shit about it.

The Death Toll

People and cities slaughtered by God or on his orders.

(And please don't say this is the old testament and doesn't apply to
christians...Jesus is God, right? And if it's in the bible and you're a
christian you
have to believe it's true)

This document is currently being modified to include chapter and verse
references and for cosmetic reasons. Thank you for your patience. Also,
thanks to Jeff for providing those chapters and verses.

My apologies for the lack of chapter and verse notation. At the time I
was reading the bible, I never thought this happy little list would ever
be seen
by anyone but myself. The effort required to look up each and every
incident is too much for someone with a limited amount of time, such as
myself.

And NO! I don't hate god because he killed a bunch of people. Do you
hate Freddy Krueger because he killed a bunch of people? You cannot hate
things which do not exist.

The number dead if stated is listed to the left. I have starred my
personal favorite "acts of God," as far as meanness and utter disregard
for innocence or guilt. Anyone who thinks TV is violent should read this
book. The random unjustified slaughter is amazing.

Killed by God

? -- Drowned everyone in the whole world except for Noah and his family
(Genesis 7)
1 -- Saltified Lot's wife (Genesis 19:26)
? -- Burned all of the people of Sodom and Gomorrah (except for "good"
Lot who offered his virgin daughters to a mob of men and then slept with

both of them himself later)
1 -- Slew Er, Judah's firstborn son (Genesis 38:7)
1 -- Er's brother, Onan (38:10)
? -- The firstborn in all of Egypt
? -- Drowned the pharoah and all of his
gang in the Red Sea
2 -- Nadab and Abihu for making a fire
? -- Burned some Jews for complaining
? -- Sent a plague against Jews for being greedy
11 -- Sent a plague on Jews who gave the chosen land a bad report
? -- Korah and other Jews who didn't like Moses
14,700 -- Sent a plague on Jews apparently for the hell of it
"many" -- Sent serpents on Jews
? -- Philistines
50,070 -- Jews who looked in the ark of the covenant
1 -- Nabal for scorning David
1 -- Uzzah for touching the ark when trying to keep it from falling
1 -- David and Bathsheba's child
70,000 -- Sent a pestilence because David sinned
102 -- Sent fire down on Ahaziah's men
42 -- Sent bears to kill children who mocked Elisha
? -- Sent lions to kill invaders
185,000 -- Assyrians
80,000 -- Lots of bad Israelites

Killed on God's orders by the Jews

? Jacob's sons killed every man in Shechem

3,000 Jews worshipping the golden calf

1 Man gathering wood on a Sunday

? Canaan

? Took the city of Heshbon from the Amorites

? All of the people of Bashan

24,000 Jews who followed Baal

? All Midianites except for the virgin girls

? Everyone in Jericho but Rahab, a hooker who betrayed her city

? Achan and his family(who had nothing to do with it) for stealing

? Everyone in the cities of Ai, Makkedah, Libnath, Jarmuth, Geder,

Hormah, Arad, Addellam, Bethel, Tappuah, Hepher, Apheh,

Lasheron, Madon, Tasnach, Megiddo, Kedesh, Jokneam,

Dor, Goiim, Terzah, and all of the Amorites.

10,004 The men of Bezek

? The people of Jerusalem, Sheshai, Ahiman, and Talmai

? The people of Zephath, Gaza, Ashkelon, Ekron, and the king of Moab, Eglon.

? The army of Sisera and the men of Karkor

? Jephthah destroyed 20 cities

? Samson killed 30 men who solved his riddle, the Philistines, and

tons of people when he died

50,100 The men of the tribe of Benjamin

? The tribe of Jabesh-gilead

? The Ammonites, the Philistines and the Amelekites

331,269 David killed a whole bunch of people

3 Solomon killed a few people too

? All of Jeroboam's extended family

? All of Baasha's extended family

450 Prophets of Baal

793,000 All Jewish Baal-followers

127,000 Arameans

1 Man who wouldn't strike a prophet

? Moabites

172 Jezebel, Ahab's sons, Joram, their priests, and their friends

142 Ahaziah's relatives

? All of Baal's followers

1 Athaliah for killing sons

1 Mattan the Baal priest

10,002 Edomites and two servents

? All of the pregnant women in Tirzah

20,000 Hezekiah killed a bunch of people

500,000 Israelites killed each other

50,000 Ethiopians

23,000 Seerites

510 Haman's army

75,300 More of the army

So the grand total comes to:

more than 399,933 people killed by God

...going only on the numbers listed (not counting, oh, say, the entire population of the world at the time of Noah, 3 cities, and other such things that were not enumerated in the Bible).

more than 2,017,956 people killed by followers of God

...not even counting the 65 cities they destroyed without seeing fit to give any numbers.

Oh, and we don't want to forget...

? Satan killed Job's children after God told him that he could.

Whoo-hoo, what a bad guy in comparison with our just and merciful Lord God.

You are only now figuring that out, Helmut??? If you can rationalize being a dipstick, go for it.

I wouldn't use local plates because locals know each other. In fact using call sign license plates is pretty dumb to begin with for no better reason than those with them are likely to be active and you are taking a bigger risk.

Strongly suggest using Buckminster or QRZ.com. It would not do to pick one of the proverbial tired old farts if you are 19; your contacts routinely use the service. If you want DX do not do it with a 2, 4, or 6 call; they are not rare. Become a Nevada 7 or a North Dakota 🔲 for the DX hunting for Worked All States. Don't go overboard and make it Buzzard's Butt ND or NV because the County Hunters will drive you insane.

And of course be sure that the frequency you are on is legal with the class of license you are bootlegging. In fact you would be better to bootleg a Canadian call; they have more phone privileges than we do. By the time you get the frequencies straight you have 20% of Element 3 anyway. Be sure to get the phonetics straight as well.

Who are you hurting? You might want to send your victim some postage stamps so he can tell the guy you worked on 20 phone that he is confined to Blissful Acres and only works CW. You can tell the kid in Zingazululand that Americans are dipsticks personally; you don't need radio for that. You won't be the first and you won't be the last.

As for 'who would know?', shutting up about a caper is like eating one potato chip. Given the lack of character the very question raises, you would have it public knowlege in about 96 seconds.

C'mon Tim. No CB dealer can do it on radios alone. He was in there
lining up some hand grenades or a full-auto AK where the paperwork
requirements are slim to none.

In the event that the HT was used on a law enforcement frequency, it would only be used there in the event that I cannot reach them any other way.(i.e. no 2meter/70cm repeater within range) You are right in that you should use every other reasonable means to reach help. That we agree on.

Hypothetical situation: You are at the deer lease. Have lots of time on your hands waiting for deer to show up. Take the HT and the repeater directory to the stand. Spend hours scanning around for activity, and find none. But, while scanning you do find an active police frequency and store that into memory. Just so happens that you fall the 20 feet from your stand for whatever reason. You have a compound fracture of the femur.(ouch) Crawling to the 4-wheeler and riding back to camp is out of the question. What would you do? Wait for the buzzards to signal for help, or use the HT? I know what I would do. Would you wait for the buzzards to land so that you could discuss your options with them? I doubt you would. Why do people have a problem understanding this?

From: aaronvoobner@my-deja.com
Date: Mon, 05 Feb 2001 17:11:09
Subject: Recycling Program For Illegal CB

---

Dear Sirs,

I am writing to ask your company to make an equipment donation to a charitable cause. Ours is a very unique program, so allow me to explain briefly.

We plan to collect, destroy, and recycle illegal CB gear.

Specifically, we seek RF power amplifers designed for CB use, and so-called "export radios" that are easily modified for use on unauthorized frequencies. At our demolition center in Toledo, Ohio, the contraband equipment can be safely and quickly reduced to non-working order. Your assurance that the equipment IS destroyed and not resold will be accomplished by a verification comittee made up of concerned CBers and Amateurs.

The resulting components will be available for use in basic electronics courses and career training classes administered by adult education programs, trade schools, and community programs serving underprivileged or inner city youth.

Since your company deals primarily in the distribution/sale of illegal CB equipment such as linear amplifiers that clearly violate federal regulations, we assume that you will be available to make a contribution as described above.

Please contact me via email at your earliest convenience for further details.

Sincerely,
Aaron H. Voobner

Hey guys,

Any interest in contributing some of that illegal keyclown equipment to
the Toledo Destruction Center for recycling? We'll give you a tax
deduction.

Hey N8,

Don't sledgehammer the power transistors. Sparky said there's some kind
of carcinogen that could be harmful to humans in them. Remove them
before you put the maul to the chassis.

>The random unjustified slaughter is amazing.

>? -- Drowned everyone in the whole world except for Noah and his family

Answer: The entire world had turned from God. Only Noah was righteous and obeyed God.

>1 -- Saltified Lot's wife (Genesis 19:26)

Answer: Lot and his family were told to flee and not look back. His wife disobeyed--implying she was reluctant to depart from the city.

>? -- Burned all of the people of Sodom and Gomorrah

Answer: The entire city was wicked.

>? -- Drowned the pharoah and all of his
>gang in the Red Sea

Answer: Hey, you saw the movie. You know what Pharoah was all about.

>"many" -- Sent serpents on Jews

Answer: Moses lifted up a bronze serpent on a pole. All who looked at it were saved. (Significance: Foreshadowed Christ. The serpent was in the form of that which was causing the trouble. It was lifted up on a wooden pole--cross-like. All who looked to that which was lifted up would be saved.)

>1 -- David and Bathsheba's child

Answer: Punishment for the sin of adultry and murder.

>? Everyone in Jericho but Rahab, a hooker who betrayed her city
>

Answer: Rahab hid the spies and received deliverance as a reward for helping God's people.

Unjustified? Not hardly! But to unbelievers, what is written in Scripture appears to be foolishness. That's been a fact for 2,000 years!

Funny you should mention that. On the morning of a hamfest about 250 miles from where I live, somebody came on the talk-in frequency and used my call letters. I'm told that six people jumped the guy on the spot. He couldn't have known that I'm heard on a number of Amateur and emergency repeaters around the state, and people know my voice. (grin).

Perhaps he'll make a better choice of call letters to bootleg next time!

Well said, Dick!

There are repeater groups who send welcome cards to every new call sign heard on the machine. When the response comes back from a ham claiming he has never talked on that particular repeater, the group is alerted and the noose slowly tightens on the bootlegger before he even knows he's been spotted as illegal.

With the advent of the Internet, the process moves even faster than before. And it surprises people to learn that the DXers are comparing notes on DX Clusters moment by moment. Summary: You can run but you can't hide. That includes HF operating.

Ask that guy in Hickory, North Carolina how it feels when the Federal Mashall shows up at your door on Sunday morning!

I don't think there is an age or IQ requirement, so you are welcome--no matter how stupid you are.

But judging from your spelling, you are too stupid for Usenet. You need to remain in the vocal (not written) mediums of communication. Just some friendly advice....

Back in my St Louis days I went to the Hamfest in Washington MO and used the talk in. My old call had an F in it; turned out a local had the same call with an S. When I got there, I too was jumped. Call sign plates helped that situation a lot.

Same hamfest had a popular presentation that crammed the park pavilion. When it ended, the honcho announced a short talk by the ARRL section rep. The pavilion was cleared faster than if someone had thrown a skunk it. People pouring out windows, etc and fleeing like sulfur and brimstone was about to rain.

We are a small Indian reservation looking for businesses that prefer an environment free of Nazi's. Since we don't want a casino on our reservation we invite YOU to relocate to our home. You can sell the biggest BADDEST amps to your heart's content and the white mans FCC can NOT touch you. EVER!!!!
You can live free and from OUR land you can yell to the white man"AUUDDDIIIOOOOO" on ANY freq. you want?
Only thing we ask is that BIG CHIEF wants a DX99 and an amp big enough to rattle Custer's bones'

ON EBAY AT:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=1212706558

MOTOROLA HT1000, UHF 403-470 MHZ, 16 CHANNEL, 4 WATTS ++ PORTABLE RADIO, WITH A MOTOROLA NTN7144CR 1400 MH BATTERY "CODE DATE" DEC. 2000, REMOTE SPEAKER/MIC NMN6193B, FRONT LOADING RAPID CHARGER MOTOROLA MODEL AA16740 (NTN7209A), BELT CLIP AND ANTENNA... AN IMPRESSIVE PACKAGE. THE RADIO IS A LATE MODEL UNIT H01SDC9AA3DN AND USES THE NEWER VERSION 4.XX SOFTWARE. THE BATTERY IS LIKE NEW AND IS STILL UNDER MOTOROLA FACTORY WARRANTY. THIS RADIO WAS USED AS A SHOP RADIO AND NEVER HAS BEEN IN COMMERCIAL SERVICE... IT HAS ALL AMATEUR FREQUENCIES AT THE PRESENT TIME BUT CAN BE REPROGRAMMED TO THE NEW OWNERS USES. IT IS AS CLOSE TO NEW AS I'VE SEEN... ON A SCALE OF 1 TO 10 IT IS A 9.9.

# 807. Update: Letter To Express Electronics

Newsgroup: rec.radio.cb
Date: 2001-02-06 05:33:31 UTC
From: "Mr. Aaron H. Voobner" <aaronvoobner@my-deja.com>
Message-ID: <95o2bc$bd6$1@nnrp1.deja.com>
Source record: 72439

Update:

I forwarded the racist email response from "Sec1@exportradios.com"
to CEO@exportradios.com as well as sales@exportradios.com, assuming that
as nominally responsible businessmen, EEI management would be concerned
that someone was using their company name to foster racism and hatred.

I immediately received back a response from "Sec1@exportradios.com"
again, this time saying "What email??".

No one other than this individual ("Sec1") from EEI has contacted me. In
my opinion this makes it quite possible the initial racist response from
EEI is genuine.

If anyone has additional information concerning EEI's affiliation with
Aryan/White Power racist hate groups, please contact me via email as I
plan to pass this info along to the appropriate federal authorities.

Sincerely,
-Aaron Voobner-

These alts are commonly used by "keyclowns" to power grossly illegal CB amplifiers. Any alternators donated to the Illegal CB Recycling Project will be destroyed and recycled.

This should help clear up your misconceptions. - Aaron

---

VOOBNER FAQ

-Who is Aaron Voobner?

Aaron is a guy who responds to the supporters of illegal CB, many of whom dominate the rec.radio.cb newsgroup and otherwise attempt to intimidate proponents of legal CB operation.

-Are you a real guy?

Yes, Aaron is a real guy and his name really is Aaron H. Voobner. Despite being the subject of a *desperate* search by illegal CB'ers in the USA, his personal information remains readily available on several legitimate databases.

-Is Aaron Voobner N8WWM?

No. I don't use profanity and I don't post porno.

-Why do you hate illegal/outlaw CBers?

Their big amps screw up the CB band for other users. Thier stealing channels from government and hams is just plain dishonest. Plus, their antics draw heat from authorities onto legitimate CB users.

- So why don't you just make your point and then go away? You're being "rude" to illegals by contantly poking your nose where it doesn't belong.

Reason #1. I don't respect people who have no respect for anyone else.

A new breed of "outlaw" CBer came along recently: folks with no respect for any one or any law. Folks who think they have a "right" to operate illegal CB and not be criticized for it. These "anything goes" people took over the CB band from the fine folks who were there for decades, and in many cases forced them off the air. These are the same idiots who post amp and freeband crap in the newsgroup and are rude to anybody who disagrees withe them.

Reason #2. Idiots need to be told they are idiots, until they stop being idiots.

The reason there are 5,000 watt amps on your local CB channels is because people tolerate it. No one dares complain. Everyone minds their own business. No one wants to get involved. The idiots get

"respect" -- so they proliferate.

- But you're just riling up the illegals and making them angry. That's not being a responsible person.

There is nothing responsible about operating illegally. Illegal CB operation is done irrespective of FCC Part 95 and it's intended purpose. Loudmouthed, irresponsible individuals who promote illegal CB operation deserve little, if any respect from legal CBers. They give legal CBers a bad name in the eyes of the public.

-You're driving CBers away from the amateur radio hobby by making them hate hams.

I am not making anyone "hate hams" because I am not a ham myself. And it is doubtful that CBers who openly despise the FCC, flaunt rules, and have no consideration for other radio ops would be good "potential hams".

-But I'm a ham and I don't care what goes on on CB.

You should. Every decade the "CB problem" has gotten worse, not better. More illegal amps splattering your neighborhood consumer devices. More phoney export radios flooding the market. More freebanders and confused truckers showing up on 10 meters. I guarantee that if nothing is done, amateurs will be unwillingly "sharing" the 10 and 12 meter bands with unlicensed CBers in a very short time. How can you "not care" about this situation (unless you are part of the problem)?

- I support legal CB, but I do it quietly.

Good for you. However the opposition isn't quiet. In fact they are downright loud and disrespectful. I choose to interact with these people at their own level (which sometimes isn't very pretty or polite).

-You can't stop people from posting. It's perfectly legal to talk about illegal CB.

I don't try to stop anyone from posting. Talking about illegal CB is protected under the US Constitution under Freedom Of Speech. However, my criticism of illegal CB is also protected. You don't like it, don't read it.

-But you accuse innocent people of operating illegally.

I don't "accuse" anyone. I ask questions. And in any case, I have no authority to arrest or prosecute anyone, so why be so paranoid?

-But it's slander.

You mean libel. Slander is spoken. Libel is written. I hardly think it's "libelous" to ask someone who just finished bragging about "dropping the maul" or "calling CQ on 555" if they are an illegal CB'er.

But if you think you have a case against me, you are welcome to pursue it. Your attorney will quickly tell you that you can't sue someone who calls you an idiot or disagrees with you in a Usenet newsgroup.

-So why don't you go to a CB coffee break and harass people?

I reserve the right to choose my own methods, thank you. I also express my opinions to legislators, auction sites, equipment manufacturers, amateur radio organizations, law enforcement agencies and public officials.

-Are you a wanna-be RF cop?

Nope. If I was, I'd be in here harassing people about antenna height and the 150 mile limit. That's Barney Fife, not me. It's not RULES I'm concerned with. It's illegal CBers BEHAVIOR. It's inconsiderate behavior of selfish idiots - who just happen to be breaking FCC rules.

- But illegal CBers are just "bending the law". It's civil disobedience. Like the Minutemen during the Revolutionary War. Or Rosa Parks during the Civil Rights protests.

Give me a break. There's nothing NOBLE about stealing frequencies that do not belong to you or locking up your local channels with a 1KW amp. If you truly wanted to effect legislative change of CB rules, you'd do it within the system.

-Are you a flamer?

No, but if I'm flamed, sometimes I'll flame back. Depends.

-But you're screwing up the newsgroup.

I'm sorry, but this newsgroup was screwed up LONG before I ever came. And if my opinions about legal CB "screw you up", then you have bigger problems than me.

-Your anti-illegal CB postings are useless.

Perhaps. But perhaps not. It is hoped that continued criticism of and opposition to illegal CB practices (such as "keydowns", CB amps, etc.) offends the self-proclaimed illegals to the degree that most of them will eventually get tired of the newsgroup and go away. That will open up rec.radio.cb for discussing the topic it was intended for: CB radio.

Hi Ken,

To update you, EEI has responded negatively to my offer. It's a shame because they deal in a substantial amount of illegal CB equipment. You would think they could provide some of it (tax deductible) to be recycled into usable scrap parts for Sparky's proposed inner city electronics class or Gary's current beginner radio classes. Anyway, from all indications, EEI staff are Aryan White Supremacists and not too friendly to minorities, so your offer of "a place for them on the reservation" is definitely not a good idea unless you want your tribe to come to harm. However when I do hear from NoName (who I think have African-American owners) and Davemade (who I think might be more tolerant but may have a little cocaine problem) I will pass along your offer to them.

Do not use the resistor and diode technique. It needs to be regulated.

Source record: 72626
Cross-posted to: aus.radio.cb,uk.rec.radio.cb,rec.radio.cb

Owen,

>Already have - dont stock manuals for superceeded models
OK, next plan of attack.

I note you're cross posting.

You've left out aus.radio.amateur or whatever the ng name is for
Australian amateur radio.

Try a single post there. Not such a good idea top cross post anyhow.
Some people get the hump when you do that.

Good luck, sorry I could not help more.

I have a Barret transceiver, also made in Aus, very similar to the Codan
stuff.

Regards

Phil / UK

I don't understand why such hostility is coming from EEI.

1) I emailed a polite inquiry for a donation to my Recycling Program to
EEI.

2) I received back an email full of racist spew and hatred.

3) When I inquired if the response was legitimate I received an email
from the person who sent it saying "what email?".

4) When I attempted to contact the company management to inform them of
this situation I received a hostile and threatening response.

5) Now they post a trick link designed to crash web browsers.

Very odd indeed. The only thing that is clear here is that Express
Electronics is not a very consumer-friendly company.

Subject: RE: Illegal CB Recycling Program
To: Deja User <aaronvoobner@my-deja.com> , sales@exportradios.com

---

Our large multinational corporation sells many products, in many
countries,
many that upset many people. We sell only what people buy, we have no
control over what markets are available, we only sell the best
profitable
products we can import. We actually have no interest in the products
themselves, or the people that use them. Actually we think CBer's are
the
scum of the Earth also, we also feel the same way about any idiot whom
waste
any time on any radio for that matter. Our customer service call center
takes in call after call from illiterate inbred idiots, and anal
retentive
Ham operators. But nonetheless, we have no interest in your cause.
Furthermore, we only donate money to solid Aryan Organizations, and only
for
militant causes. Inner-city trash (i.e. niggers) will receive no
hand-outs
from this company. Who you are, or why you do what you do is beyond our
concerns. But we have no interest in anything to do with radio
equipment,
other than sales. So please fuck off, you have been added to our e-mail
filter so don't bother with any more of your bullshit.

The Coastal Mart and Naes have locations nearby that sell and/or service CB Radio equipment

Coastal Mart
2110 Chouteau Ave.

Naes fuel and wash (phillips)
I-70 exit 249A
Madison W. / 10th St. E.

The Bobber Travel Center (Texaco) in Sullivan has a CB shop on the premises.
I-44 exit 225 (MO 185 N.)

Visit a local truck stop in the area and ask around to see who the locals recommend.
Good Luck and Keep on Trucking.....

Heh. These guys need to learn some programming. Other than opening up two extra
windows, this thing did nothing to my Sparc Station running Solaris 8. I did do a
'pkill -9 netscape' just to be sure, though.

Lamers!

## 847. Re: I heard a CB'er on 20 meters

Newsgroup: rec.radio.cb
Date: 2001-02-07 12:24:46 UTC
From: Ed Cregger <ecregger@earthlink.net>
Message-ID: <i8bg6.2406$2g.174374@newsread2.prod.itd.earthlink.net>
Source record: 72627
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.cb,rec.radio.scanner

I just got back into amateur radio after a three to four year layoff. The language has changed a bit since I was last active.

For instance, where did saying "QSL" or "Contact" come from?

Q codes are for CW, not phone. Saying QSL is the same as saying 10-4 to my ears.

Contact? I have no idea where this could have come from. The traditional method of injecting oneself into a conversation (which is rude if the conversation is between two hams), is to announce your callsign. If the participants want company, they will invite you into the conversation. If not, you will be acknowledged as the next in line for the frequency when their conversation is complete.

I'm not stupid enough to think that anyone cares about my opinion, so there's no need to be offended. It's just that even I, an ex-CBer during the seventies, can see some of the CB SSB language infiltrating the ham lexicon/culture.

Does it matter? Not really, but it does seem to make us seem a little less intelligent. After all, the rules for telephony state that we are to use plain language, not codes or ciphers. But then again, that's just my opinion.

Put the juice to the big radio CD.....you won't hurt 'em. Those
Sprint dishes are way up in the spectrum. Sprint's DSL offering
is pretty much the same as anyone elses. Sprint customer service
also leaves a lot to be desired, but they are working on it. Verizon
rolled out their DSL service and then couldn't provide it. Got sued
big time. Sprint did the same thing with a service called ION. Getting
sued right now. I have heard pros and cons both ways, but it seems
DSL is the way to go over cable modem. I only have Comcast to
compare to and others may be speedier, but a good 56kv.90 modem
is just as fast as the Comcast cable modem. I am assuming it is
because they are limiting the bandwidth used for the internet on their
system. Just another opinion. Might not even be worth .02 cents.

From: twistedhed@my-deja.com
Message-ID: <95rjn3$bc6$1@nnrp1.deja.com>
Source record: 72634

Setting:

Twistie's trailer park.

A half dozen poor little illegal faggot keyclowns gather round a hibachi. They cry and sniffle and want their blankies. They think back to the days when all of rec.radio.cb was their oyster and WEEP.

N8's voice suddenly comes from the sky: "SING, little illegal faggot keyclowns, SING!"

At his command, Dweebo, Twistiekins, Scottie, tnom and 1mangayboy rise from their gay love session and form an impromptu quintet.

(sung to the tune of THOSE WERE THE DAYS)

Those were the days my friend!
We thought they'd never end,
We'd key our amps forever and a day!
We'd suck the cocks we choose,
We'd soak ourselves in booze,
We are sure to have our asses thrown in jail!

(Chorus)
WAHHHHHH! WAHHHHHH!WAHHHHHH!WAHHHHHH!
WAHHHHHH!WAHHHHHH!WAHHHHHH!WAHHHHHH!
WAHHHHHH!WAHHHHHH!WAHHHHHH!WAHHHHHH!
WAHHHHHH!WAHHHHHH!WAHHHHHH!WAHHHHHH!

Source record: 72636

ACCORDING TO ONLY VooB:.."This unit features built in variable output wattage, Varying the output wattage is a violation of FCC rules."......

So Explain how the FCC went about Violating its own "rules" by Type accepting this radio with this feature built in??
Also, because you Don't Know, Many type approved CB's, including EVERY 40ch Type accepted Handheld CB from Radio shack, Cobra, Midland & others has a high-low 1W/4W variable output power switch, How are all of these radios Violating "your rule", & yet still type approved??, Also the Texas Ranger TR-399WX & TR-939WX weatherband mobile CB radios also have variable output wattage, The Galaxy DX-949 & others.. and are TYPE ACCEPTED for US citizens band use. ARE you going to report the FCC to themselves for "breaking" YOUR rules?? AND finally, advertizing an approved feature on an approved radio that allows you to Lower your output from 4 watts down to one has NOTHING to do with illegal CBers...
In fact, the CB band would be a lot less noisy if Every Single CB had a Variable output knob or switch that allowed LESS than 4 Watts output.
You are a stupid moron, & quote "rules" you obviosly don't understand, as evidenced by your taking exception to FCC approved unaltered equipment. Send Nasty emails to Radio Shack & Midland, Ranger, Cobra & Galaxy explaining that this FCC approved feature must be kept "Secret" because Advertizing this feature on their radios Implies illegal use"..... Your the kid in the back of the class that SO didn't understand the lesson, that when the teacher called on you, your answer made the whole class burst out laughing......

Hi Ed. Thanks for sharing your views. I personally feel that a hammie OR cber that yaps and yaps for an inordinate amount of time without ASKING to see if anyone else wants to use the frequency is rude. If I am to meet someone on frequency at a certain time, and I break, or "interject" as you put it, and get totally ignored, then those ops, hammies or not, are the rude ones, especially if the conversation is mundane....."yep, ah had that 'ol boil removed off my duff at the sawbones and ahm a gonna git ma gout treated next....." Come on! If you get offended from someone "interjecting" in your conversation, you're in the wrong hobby, pal!

Didn't say what type car you had. I had a van in the eighties that I couldn't get rid of the whine noise no matter what. Every time I hit the gas, the whine would come through. Figured it was in the ignition and learned to deal with it. One day the fuel pump went out, replaced it with an aftermarket cheaper pump and the whine went away never to return!

Used to be a good place in downtown Desoto a while back. I don't know
if they are still there or not. Also, used to be a place over in Festus.
Sorry, can't remember names.

Look hard enough and you will see this is his pattern. When you prove him wrong, Dougie gets so worked up that his brain stops functioning and all he can do is stutter, mime, imitate, and (chuckle) threaten us.

See if you can get a hold of a copy of the video tape. I think my brother
may have a copy too. I haven't seen it yet, the finished video that is.
There are some shots of the ground crew setting up for the launch, and the
video from the flight itself. The people from the group seem real nice too.
The name that I most remember was Phil, I think that's the right name, the
guy with the 8 element 2m quad antenna on a rotating boom on the top of his
van. Now that was something to see.

The Armenian judges gave this a 9.8 on the Olympic Troll-O-Meter, but they were over-ruled by the umpires in instant replay, who award it a 2.6.

The Armenian judges lodged a formal protest!

It was sufficiently trollish, of course, but way too obvious. It was poorly written, poorly executed, and was so incredibly lame as to lack the true drawing power of a really masterful troll. Maybe as high as a 3.1 for the intense stupidity of the premise, but a 9.8? Never! The Armenian judges tear their hair out, throw their balalaikas down in dismay, and perform the traditional Armenian Dismay Chant! They demand a recount!

I have very few users in my area (new service) on ATT cable, so its FAST. I see 900kb/s - 1meg/s daily. Wait till everyone jumps on it though.. My local provider also gives up to 3 static IP's. For now, this is the best I have seen in my area.

Congratulations you figured it out....to continue.....more enforcement
that then forces the FCC to decide to terminate ham radio because it is
out of control.

Wonder how much money 75 meters will bring?

Look in to the newsgroup alt.radio.pirate and start your own
pirate radio station! You can use any of several bands but the most
popular are the AM broadcast band and the FM broadcast band.
Lots of great equipment is available and the people of your town
probably are dying to hear a good radio station.
Napster can provide your program material too.
And boobner won't bother you!

No, but the big boys paying the big bucks for a commercial station will
care. That will get the FCC on your case. The commercial stations have the
money to make a difference. It's the commercial stations that got legal low
power broadcasting licenses canned, so they are not going to take kindly to
some pirate station operating in their backyard either.

It created 2 folders in my Outlook news reader, both began with "hacker". It was a bush league stunt. I don't appreciate redirects in my e-mail, let alone shit that writes to my hard drive!
Don't get me wrong, I was, probably, one of the first to Plonk the nwoob twins and hate what they've done to this newsgroup, but I've got to draw the line here. What Sean did is inexcusable.

By your response here, I'm led to believe that you see nothing wrong with what you did. No matter. You may not feel there will be repercussions but there will be. Just last week I referred two people to you. I will no longer do so. Bill get's my business, exclusively, from now on. Also, he get's recommended to all my friends, IOW, all my word of mouth, goodwill, etc. I used to recommend you both. You get nothing but scorn, from now on.

Have you verified that? What you proposed would be a Tech+ which you can't
get anymore from my understanding. Besides it's sort of silly not to upgrade
to General.

Rules? I find an ILLEGAL FAGGOT KEYCLOWN agreement to give OTHER ILLEGAL FAGGOT KEYCLOWNS blowjobs in place of rules governing when I can suck dicks has served me quite well since I first started sucking cocks, in the 3rd grade. Any color shape or sized pekker is the same thing to me. No serious repercussions for occasional raking my teeth too hard over someones nuttsak, as it should be. I don't like my asshole super crowded with a 12 inch pekker so tight that no one can get another millimeter in, unless it's tnom or Scottiekins, they have such little wee wees that they can both crowd in where every other ILLEGAL FAGGOT KEYCLOWN has played for years. Yea, I listen to the rules about safe sex, but most of my gay activity is spent in search of new ILLEGAL FAGGOT KEYCLOWNS to have gay sex with. Or I listen to the middle east countries personal ads, where i often hook up with 13 year old bitch boys who want to do their jamming thing in my ass without a rubber.(I do it with Iraqi boys all the time) , or talking to Cuban fags on a regular basis, so I can go down there and suck Cuban ILLEGAL FAGGOT KEYCLOWNS off too. (Not to even even mention the marriage I have with tnomiepoo and GayScottiekins, they apply KY jelly to me. I'm an ILLEGAL FAGGOT KEYCLOWN, not a normally socialized human being) there is all kinds of fun to be had as an ILLEGAL FAGGOT KEYCLOWN, and I plan to keep sukkin the wazoo forever.

Come on now Aaron. What the hell do you expect? Other than the link that everyone but me (seems kinda strange, but anyway) had so much trouble with, did you honestly believe that a company would just give you a piece of equipment that they have money invested in so that you can just destroy it for your idiotic cause? I'm not exactly sure what you do for a living and i'm not sure i want to know but seriously man. Grow up. I'm pretty sure by judging from what you say in your posts and the way you word some of them that you are older than 13 years so its time now to start acting like it.

******,

There's only one reason they're here. They're looking
for attention. When we all cease to give the "children"
the attention they so vehemently require, the sooner they
will disappear. No replies, no responses, no acknowledgement
that they even exist. If we can collectively ignore them,
they will go away. Makes too much sense, doesn't it?

Voobner = ignore
N8WWM = ignore

In article <95pe18$fpr$1@nnrp1.deja.com>,
The REAL N8WWM, not the trashy fake. <noillegalop@my-deja.com> wrote:

Listen to blah blah! It's great fun and even though Napster is cool, they don't have the stuff to make a great station, but they can get you statrted. Remember, if you can hear it on a commercial station, it has no use on a TRUE pirate station. And stay away from Ramses products.

yes you did, vhf work is local talking. perhaps youll have the rare 6 meter contacts over seas but the rest is all here in north america from ducting or moon bounce, meteor scatter type things. leland, how many years will it take you to get your WAC award on vhf? hf you can get dxcc in a weekend if you dont feel like sleeping.

here in texas we've had the same pirate stations on the air for years. ask the boy in austin. when they get a NAL after a few years they just move the tx site till they get another one a couple years down the road. no big deal and no problems as long as you dont have a dirty signal or get too outrageous on the air.

That's at least half the fun of it, moving the xmitter around and keep
them guessing. With the name "pirate" attached to it would you expect
there's no risk?

> It's the commercial stations that got legal low
>power broadcasting licenses canned,

There's LPFM licenses being issued right now, but with too many
limitations. They want the LPFM station to be EBS friendly and that
costs more than the whole rest of the station setup.

>so they are not going to take kindly to
>some pirate station operating in their backyard either.

It's important not to interfere with the commercial stations, that
will put off their complaints until they realize that your station is
better than theirs....if it is.

Tim,

Yep, as usual, everyone's "trippin' hard."
Jeff even referred to it as hienous.

hei�nous (hns)
adj.

Grossly wicked or reprehensible; abominable:

Use of this term is usually reserved for things like
murder. Go ahead. CLICK THE LINK!

After some of the posts I've seen from him, he's the
last guy who has any room to talk about ng etiquette!

Unfortunately this newsgroup is a reflection of the cb
band.

Sure it is.
The people causing the trouble, posting under different names,
cursing, assuming others
identities and accusing them of homosexuality, brow beating and
repeating, over and over, the
same tired message are Hams, or in Boobie' s case, a Ham wannabe.
Where the hell do you get off coming in here and making such
ridiculous statements? You are
part of the problem, not the solution, ya dork. Nice display of
ignorance. The last time I saw such
a display, George Wallace was standing in front of the University of
Alabama.

Jeff

Again, WHY BOTHER to even note in your ad that the unit has "variable
power" unless you (desperately) want to imply it can be used illegally.

Or are you going to try and tell me someone is going to buy the radio
and turn the wattage DOWN?

LOL. (You guys and your excuses are always good for a hoot)

> youll be able to tell they really know code above 5wpm

More power to'em, me, I could care less what code speed they can beep at. The whole license class thing, as a stupid status symbol, drags down Ham Radio. Some yahoos have to wear their license class on their shirt sleeve to feel good about themselves. Others do the same with CW. Some feel your not a real Ham unless your walls are plastered with QSL cards, and DXCC awards. The list is endless. The egos get over inflated, and I just don't care, which really seems to bug some chest thumping brass pounders I have run in to. There's to much to Ham Radio to be bothered by the few who want to position themselves as king of the hill. The only problem with being king of the hill is there is always somebody to come along with the next great "if you can't...., your not a real Ham" bit, then proceeds to kick the last resident off the throne. Maybe that's one evil that CB Radio can brag about not having.

Blah blah, you done it again! Exactly right! The key is when you become better...this is when you attract unwanted attention. It's kind of neat to take the pulse of a community every once in awhile. If you see a T-shirt with your pirate tag, it's probably a good idea to cool it for awhile...unless you have your stuff together and there is a cohesive unit of "cells" actively working together. Jimbo does Tuesday from his place, John does Sun, Mon, and Thursday from his garage, Joe does Wed from the boat,, and have some really twisted dude do Friday and Saturday nights from an undisclosed locale, changing it each weekend..the key is the ability to shut down and move at a moments notice and be up and running within 24 hours. All at the odd times, of course. Portablity is of the utmost importance. Corporate stations will not piss and moan until they feel they are losing revenue. They can't have the local community listening to anything their sanitized canned programming won't offer. I read all of this somewhere, of course.

From: fire228@my-deja.com
Message-ID: <95se00$5nv$1@nnrp1.deja.com>
Source record: 72511

Everyone,

There are 25 subject listings on this page. Recent responses to postings displace inactive threads, and as these inactive threads move to the bottom of the page, they are utlimately moved to back pages and so on. I suggest that we treat the forum as though Voob and N8 no longer exist and let the forum move them off into oblivion. If we can continue as though they don't exist, the software will take care of the rest. All there is for us to do is to continue as though they didn't exist. (eg, notices that messages have been sent to the killfile are still responses)

I realize that for some of us it will be extremely difficult to ignore these bastions of controversy, however, if we all put forth the required effort I believe we can bring some resemblance of order back to this ng, even if only the main page. If, as many of you have said, that these boobs are interrupting the usual format of this ng, then this strategy could well prove effective. I hear a lot of talk on this ng about freedom of speech, but i believe that some of us have forgotten that the right to remain silent is part and parcel of the overall right. Also, for many of us, ignoring someone who has "ruffled our feathers" is a most difficult thing to do. I for one believe that it can be done. What do the rest of you think about this? Your comments are greatly appreciated. Everyone dive in!

I for 1 would think it very satisfying to see these guys and their rhetoric smoothly flow down and off the page without anyone paying them any mind. How 'bout you?

What are you talking about? What posts could you possibly be referring to? There's a few people that post to this group that have the name "Jeff". Maybe you should get your facts straight before you make such ridiculous statements in the future, along with producing some proof. I expressed an opinion. If that link crashed even 1 out of 10 browsers it's stupid and is no different than what doogie does. If you had no problem, great. Obviously others did. In usenet an action like Sean's is heinous. Check your own definition and try to keep it in context. Anyway, have a good day, wont you?

Jeff

Havent operated on the old ham bands for a couple years now. I keep the license up to date, but there are just too many idiots on the air for it to be anywhere near enjoyable any more. don`t worry. the FCC is selling them off piece by piece anyway. Ham radio has had its day, and the ARRL and FCC let it go down the drain. It is now going to die a well - deserved death, and leave us all in peace. We still have the internet, and we can easily talk round the world on it. I stopped putting up with CB pond scum years ago, and since that is what the Ham Bands are on their way to becoming, I think it derserves equal attention .....

I don't find defending the CB Hobby, especially within a newsgroup for CB, nearly as reprehensible as you do, apparently.

So *This* is the post that caused you to make this statement:

"After some of the posts I've seen from him, he's the last guy who has any room to talk about ng etiquette!"

Would have been nice if you included the post I was responding to. More out of context hokum.

I proved you were a phony before. This confirms it. The ILLEGAL FAGGOT KEYCLOWNS from rec.radio.cb have gotten me booted from several isps. All because I retaliate to their childish ways. Its ok for them to threaten me with physical harm, but if I say anything back they make me look like the bad guy, even some hams have sided with these criminals. I have no use for criminals. Check out my webpages of the ILLEGAL FAGGOT KEYCLOWNS. I will not stop and you can't do shit about it!

The REAL N8WWM., not the trashy fake!

Jack,

Yes, I can see how "negative talk" concerning illegal CB could be a
threat to you. And you'd certainly want to take the lead in stamping it
out. After all, your business depends on illegal CB in order to exist.

Perhaps I over-reacted, I don't know. But it acted like one of those
re-direct e-mails that x-rated sites like to use, to snare unsuspecting
people to go to their sites. Once there, it seems to take over your browser
and repeatedly opens to more and more pages, faster than you can close them.
Also confused Outlook on my machine and wrote two new folders in the folder
list of the news reader. I just started using Outlook so maybe I don't have
it set up correctly, I don't know. I do know that I had to close everything,
re-start and when I opened Outlook, I had to delete the two files created.
Firewall or no firewall had nothing to do with the process. I use Zone
Alarm. Unfortunately, I, like an idiot, clicked the link, thus inviting
whatever happened. I just think it was a bush league stunt by someone who
should have known better. That's all.
Anyway, I'm done with it.

Jeff

I agree with you and thank you for merely pointing out the post, rather than including it in your post. I've had him kill-filed for ever, but a lot of people I do read keep responding to him, so it seems I can never quite get rid of him, altogether. Seems like a good idea.

Seems to me that I need to bring back the Voobner foundation since my many poster names all give support to my lost cause and that equals me me me me. I have serious problems now and am in way over my head. I have more than I bargained for. I feel like a dinosaur faced with extinction. I want help. I need help! Please! Somebody hallllllllp me!

Mr. Voobner I am willing to make a wager with you regarding you getting www.keydowns.com removed from the web by your comical fwd to FCC posts. We can actually make this wager with a specified time limit. The method of payment will be PayPal i know you scour ebay so you should be familiar with how PayPal works ... What do you say are you ready to step up to the plate and back up your posts... I am ready.. You heard the saying put up or shut up ... again i am sure you will not reply to me

I'm still trying to figure out HOW merely advetizing an FCC approved feature that lowers your output (a CB's variable output knob or 1W/4W switch) IMPLIES illegal use??? YOU really have to be "OBSESSED" with illegal CBers to start looking at FCC approved & advertized CB radios & features , & "SEE" illegal operators. Think about it, by using this 2+2=5 logic:
1) ANY CB with a high low power knob "implies" illegal operation (I guess because "Linears" Have a high low power knob too??)
2) Any APPROVED CB with a frequency display must also somehow "imply" bad stuff ( I guess because some CBers on illegal freqs have a freq display on their radio..so everyone else buying an approved CB w/ a freq display must be like "Them")
3) ALL CB's advertized with an S/RF meter must "imply".....because dudes with "linears & channels" also have S/RF meters...
4) Cobra's slogan for SoundTracker "Adds Punch on Transmit" implies illegal operation...because "linears" also add "punch" on transmit....
Even people that normally agree with assface are laughing at him on this one.....

If he had a license he is a HAM not a CB'er
Frankly Freebanders are like the Hams of old. If you look at the FCC
enforcement logs The Hams are out of control and need enforcement while
Freebanders are mature and working to improver thier knowledge, save lives,
promote freedom and democracy, and gernerally aid and improve the geneneral
welfare or thier comunities.

Why would anyone believe a fake poster at Deja with a name like twistedhed? Seems to me like you are the guilty party harassing me all the time and using my LEGAL call sign, you ILLEGAL FAGGOT KEYCLOWN, otherwise, why would you feel the need to post your reply more than once? The guilty always protest the loudest! Come to Dayton FAGGOT! ANY of you! I'll prove who I am with a lunger in your FAGGOT face! Sissy boy! Keep it up!

******,

I would like to take this opportunity to honor
Helmut Sweenie and congratulate him on being the
first ever to win the coveted "Golden Weenie" award,
named after him. Well, sort of.....

Twistedhed,

If you want to contest this decision, let me know.

## 986. FCC class A or B? enforcement

Newsgroup: rec.radio.cb
Date: 2001-02-07 23:23:13 UTC
From: h <not@aol.com>
Message-ID: <t83m35f7s5u51a@corp.supernews.com>
Source record: 72666

The FCC regulates PC's. My PC is class A which means it is legal for use in residential areas.
Voobner uses an ILLEGAL class B computer to post his drivel. NW8 has illegally upgraded his class B pc and both their PC's cause more rf interference then ALL the illegal amps in the world.
One agent who was part of the team that Busted down Voobner's door said" Well his Ham gear is in order but he was using a class B PC in a residential area so we had to take him in and confiscate the ILLEGAL PC." These PC users are a thousand times worse the illegal CB'ers or rapists or killers. We all need to stamp out ILLEGAL PC's

--
Sincerely,
Ken

Tracy, pretend for a moment that I know nothing of the ARRL and the ARS.
Now explain your position WRT the ARRL, and identify the organization
that you believe to be the solution, and state why.

Thanks, Brian

No. And here is a copy of the post in question to prove it. You will not find the word "talk" appearing anywhere in the quoted text.

---

"I guess that shows you what you don't know about Ham Packet Radio yet. You can either operate a packet station point to point, or you can network through other packet stations as digital repeaters, or through packet Nodes. Some areas of the USA have good packet networks. I understand they have a good network in Europe. Some of the packet networks run up to 56K on the backbone, and use TCP/IP over AX.25, so one can use all of that nice Internet software on the computer. There are a even a few guys experimenting with using the wireless network cards on microwave (2.4 GHz) for really fast connections! Most packet activity in the USA is done at 1200 bps or 9600 bps right now.

Other hams up load slow scan photos on the packet satellites for others to down load in a store and forward mode. In other words the computer on the packet satellite will store the file in memeory until it orbits over the other ground station that wants it. A fair number of these stations have their operations fully automated, up load and down load files, and automated antenna tracking when the birds are in range. They just turn on the computer, and let it do its' thing. Some stations are used to link different packet networks together through satellite links too."

---

> hf you can get dxcc in a weekend if you dont feel like sleeping.

That's the point. It's TOO easy on H.F. Now try getting a DXCC by V/UHF EME. Then you will have some bragging rights, not to mention the skill of the operators, and the investment in equipment to do it with. You want to see a big EME antenna array? Check out W5UN's setup.
http://web.wt.net/~w5un/mba.jpg You think you have the skill to build an antenna like that, 30db of gain on 2m? He claims it cost him $10K, and that was finding most of the material as scrap, except for the antennas.

There is NO need to ask if anyone else need to use a frequency. YOu check before going on a frequency to see if it's in use. If clear it's all your's. There is NOTHING rude about using a frequency for long periods of time.

> If I am
>to meet someone on frequency at a certain time, and I break, or

>the wrong hobby, pal!

That all depends on the tone and content of your interjection. Was it a wize ass remark? Then GOOD, you SHOULD be ignored. If not then yes, it's kind of rude.

try running the hot wire straaight to the battery with a heavy gauge
wire. also be sure to use an inline fuse on the hot if not also the
ground and besure to have a clean ground. also try an inline noise
filter.

I couldn;t agree more myself. while I won;t disagree that there are some

bad eggs in both CB and Amateur. the are not ALL bad. And improvements can be made if you go about it in the right way.

I am in the proccess of getting my ticket. and I feel that I am a responsible and LEGAL CB operator and I will continue to be courtious and respectfull on the amateur bands when I finally have the priviledge to use them. I have friends here in town that are hams, sometimes I go over to their house for coffee and they share their wisdom and experiance with me. I just hope that someday I can do the same with a new radio operator.

That may change. The guys who wanted to do legal low power broadcasting, that can't get the license now, are more than willing to turn in the pirate stations. You don't need a genius level IQ to figure out why either. Also the number of pirate stations is going up, which is not going unnoticed by the FCC. It's a matter of when, and not if, there will be a big crack down on pirate stations in general. You have to remember the spectrum used by the pirate stations has a big commercial value, it's not like freebanding on 11m, so the band is monitored more closely.

If the big boys feel the pirate station is sucking off to much of their audience, then the pirate stations days are numbered. Audience size translates in to market share, which translates in money. And that is the real rub, get too successful, get busted, or nobody tunes in the pirate station so they may as well be transmitting in to a dummy load. Not much point in putting a station on the air nobody tunes in to.

There is something wrong if you don't stop and pause to see if there any
"breaking" stations in between your qso.

# 1026. My name is Timmy

Newsgroup: rec.radio.cb
Date: 2001-02-08 00:54:33 UTC
From: "www.kp82.com" <nebodapussyass@my-deja.com>
Message-ID: <95sqo5$hmq$1@nnrp1.deja.com>
Source record: 72709

My name is Timmy, a punk-ass little fag
Keyclowns rely on me to lick your jizz filled bag
I sit in my chair and play with my dick all day long
At night I go to truckstops, to suck some keyclown dong!

My sister is abnormal, and I know that of course
I watched her last night in the barn
Happily fellating a horse

Yes, I'm Dimmy the drunk ass super fag
A peter pupper of the first degree
Just say the word and I'll go down
Upon my gayboy knees!

It's true look at your own foul and filthy mouth!
Ham's always use foul language and filthy talk on the radio just like they do on this newsgroup. Freebanders know better. Freebanders are mature and can express themselves without spewing forth filthy language.

# 1031. Read This If You Think XFORCE Sucks

Newsgroup: rec.radio.cb
Date: 2001-02-08 01:02:51 UTC
From: "Mr. Aaron H. Voobner" <aaronvoobner@my-deja.com>
Message-ID: <95sr7n$hu5$1@nnrp1.deja.com>
Source record: 72713

If you're a serious competition amp man who chooses to use boxes other than XFORCE, you'll want to hear this.

These XFORCE guys think they own the world. They diss other people. They brag that they are the best. And even though they say it loud, you know in your heart it's not true. For this kind of blatant disrespect, they ought to be put down, and put down hard.

Well, finally, here's your chance to stop them cold. I have a direct hookup to the offices of Big Brother. Send me names, addresses, dates, and other details of XFORCE's business operation and I'll see that the info it gets to the right place, if you know what I mean.

For your protection, all respondents will remain confidential. Mail me in confidence at aaronvoobner@my-deja.com -

- and perhaps next time you roll up to the line your "competition" will have disappeared!

Sincerely,
Aaron Voobner

The link did all the same shit to me. I wouldn't usually click on a link in a newsgroup either but this came from a well known dealer. Hell, I thought it would be a link to their own group or something.

Helmut,

I guarantee that if you ship a working "keyclown" amp (not a ham amp) to
the Recycling Project I will make sure that a url containing pictures of
its sledgehammer destruction get posted here in the NG for all to see.
Ship the amp to N8's QRZ address ASAP and we'll do the rest.

Sincerely,
Aaron

## 1041. 28.085Mhz: Pure Anarchy!

Newsgroup: rec.radio.cb
Date: 2001-02-08 02:04:11 UTC
From: toomanyradios@aol.com
Message-ID: <20010207210411.03780.00001745@nso-ch.aol.com>
Source record: 72722

Had some time on the road today and Rush became boring...so, I turned on the 'ol 10-meter mobile.

Dialed up 28.085 and heard quite the circus going on. Several truckers on AM, carrying on what sounded to be local conversations with each other. Mixing with their signals were presumed ham operators...attempting to jam the above-mentioned truckers with CW, tone generators, and various sound effects. Also a loud, gruff, southern-drawl voice that kept repeating "Get the %$#@! off this frequency, you scum-suckin', interlopin' CB'ers. This here's a ham radio frequency. Get the %#$#@@! off this frequency!" This chaos went on for several hours this morning & afternoon.

Laughed so hard that I almost ran off the Interstate! Haven't enjoyed a circus like this since "Big Al" Abernethy used to play the "Pork Butt Song" repeatedly on 3894.5!

If you're a seriously into amps you'll want to hear this.

Davemade dorks diss other people and brag that they are the best. Thats bullshit!
Email me any info you have on Davemade: Owner, location, phone, etc...
I will get their asses busted by the FCC.
All info will be confidential. Write to nebodapussyass@my-deja.com.

Lets bust these assholes.

Sincerely,
My name is Dweebo

I think it's time for a vote. Let's just toss it up in the air and see what everyone thinks of EEI.

Based on the link they posted, and Sean's, Justin's, and the CEO's childish rantings, what does everyone think? Pick one from below.

1)They suck and I would never buy from them.

2) I have no brain and I believe all their hype, and would gladly let them rip me off.

Hi Barry, it seems your e-mail is still screwed up. They keep bouncing back.
There is somebody on Ebay selling the radio you were looking for.
According to the ad it has AM and SSB.
the ebay number is 1211599676
If you read this, call me at work, the new apartment phone is not hooked up yet.

Steve

Now, let's back up in time to when the Generals *got* privileges they had not worked for, when they were given phone privileges on 75 and 20 which were formerly restricted to Class A operators. No exam, no operating/license time restriction, no nothing - just fire up and operate.

Never seem to read much about that end of the stick, do we?

Hey guys first I would like to thank you in advance for the info:
Ok well I just got a President ax144 40 channel/ssb cb radio and I know its not necessarily the best little radio out there but decent well any way it has a upd2824 pll and I realize that the only way to add frequencies is to insert a new crystal but my problem is I don't know what frequency crystal to use I know that there is a way to figure this out mathematically and if I could get that equation it would be greatly appreciated or even just let me know which ones to use. Thanks again I really appreciate the help

Yep... Phil and Anne (I'll leave the callsigns out)... Dodge Van,
White/Burgundy stripes and interior. Altimeter on Dash and HF rig between
the Captain Chairs. We've gone to Traverse City with them each Valentines
Day Weekend for years... except this one... no can do. Phil's the Head of
the Electrical Inspection Dept for Warren. If you think the MABEL thing was
cool, you oughta' visit our Field Day in Romeo (Phil and Anne, & I have
operated the 15 CW station with my equipment and Phil's Tower and Beam for
at least 7-8yrs now). Phil's REALLY into the fox-hunting aspect of the
MABEL thing... they go to several different fox-hunt competitions
annually... If you don't want to be found, you'd better hope Phil's not the
one looking!... He's VERY good, and VERY fast. If I remember right he said
he was within 300ft of the landing site when MABEL landed... NOT afterwards.
I haven't seen the video he has, but will eventually. We'll probably link
up once the river thaws and we get our boats in.... we meet up a lot on the
lake (he's got a 26ft'r, I've got a 33ft'r) He's also one HELL of a guitar
player and loves to ROCK... plays in a band called QRM (USECA's all Ham
Band)... I'm a member too.
Phil wouldn't know me by the handle 'Cap'n Crunch' unless he remembers
conversations we've had about my old Chris Craft (that was it's name), but
he'd recognize the name 'Manitou'... he's tied up alongside plenty of times.

8 element quad... Hmm, I thought it was 6... don't really remember, but 8
seems like it would be too wide to be useful while driving... he rotates it
by arm from inside the van (I've been in on some hunts). I use a 13 element
2m Yagi from home, but it's not up very high.. 25 feet or so.... at home
Phil's got the same 13 element antenna up 70 ft... NICE!

Gott'a guy lives near a buddy o' mine... 50' crank up tubular tower and has
a 10 element 11m Quagi on it.... I would say, that for him, the band is
'open' wherever he points it! A few years ago, one of the fella's in our
club brought the same antenna to Field Day... best score the 10m SSB station
ever earned. We run anywhere from 16-21 stations on FD (everything from
160m-1.2Ghz, SSB, CW, SSTV, RTTY, Packet, Satellite)... placed 3rd in North
America Last year among thousands of contestants. (running QRP!)

> youll be able to tell they really know code above 5wpm

Not so... as a VE, it was impossible to ignore the huge numbers of Advanced Class callsigns I saw going for the non-20wpm upgrade. The Extra written WASN'T ver hard.... MANY, MANY advanced class licensees around here mad damn sure they had the old Extra Class written out of the way before the exams changed in restructuring... that way, all they had to do was show up at a VE session after the fact with their certificate of successful completion for the 'instant' Extra (the 'new' Extra contains elements of both the old Advanced and old Extra class exams......the old Advanced was said by many to be the toughest exam)

Now.... I know you didn't say that they wouldn't upgrade, but rather that they'd keep their Advanced calls..... Almost every Advanced I know has already upgraded AND gone for the 1x2 or 2x1 callsign. The VERY few I know who haven't, just didn't want to bother with another test of ANY kind (read that as... 'don't care for any more privileges') or now face taking a 'combination' exam which includes that old Advanced exam because they were unaware of the restructuring coming and it's implications (read that as, probably very inactive in Hamming)

upgrade
> to General.

I thought that's what I just did for you in the previous post...
I'll state it again... if you hold a Tech license (old or new... without
code), and you pass a 5wpm code exam for which you hold a VE Certificate of
Successful Completion, you earn HF privileges comeasurate with the old
Novice & Tech + licensees. You will NOT get any documentation from the FCC
reagrding your Code Certificate, nor does the FCC database reflect your
having that certificate. Your only proof of having passed a CW test is that
VE certificate and it IS your ticket to HF privileges.

(NOTE: the reason for it NOT being silly to upgrade to General from Tech
(with code) is the vast difference in spectrum and modes allowed the General
beyond the Novice-Tech's.

Don't know what you've been told, but the above is reallity.

## 1067. Voob an impersonator?

1952, I believe..... I've done quite a bit of research into the changes in
Amateur licensing over the years... some big changes in 1924,1928, 1934,
1952,1967-69, 1990, 2000 (dates may not be 'right on' the money, but then
many of the changes were phased in over a period of time.)

The report has been updated,Voobner was arrested for trying to pick a transexual prostitute in Cleveland,he was reportedly under the influence of metamphetimine,and was declaring that he was an informant for the FCC,and he was only trying to recruit the transgendered creature for his campaign against cb'rs.

Aaron. you're so full of shit i can smell you in chicago!!! When was the last time you saw the owner of x-force on here putting down everyone elses boxes? Maybe you've seen x-force USERS but not the main guy. He has never been out here putting down anyones stuff neither has dave. We've been out here a lot longer than you have and your bullshit stories are not working. You can try to say anything you want out here and post however you want. Besides for your little buddy N8 nobody out here really listens to anything you say. And what you say certainly doesnt bother them, nor will you ever get any of us to send you any of our equipment. If you want the good stuff then i suggest you get a life and a fuckin job and go buy one ya loser. Stop trying to get free equipment. Take it easy voobs.

Dear colleagues,
According to my source in the KGB and CIA ( a double agent, evidently?), all the messages in this newsgroup are put immediately on the organization hard disk, moved to a CD Rom, and sent to the international space station via a CB radio and an interface on 27.555, for future use. 100% reliable, I can assure you.

Apparently,as my sources have informed this reporter,A Subject matching Mr.Aaron H.Voobner,had been spotted earlier this evening in a local truckstop parking lot. Eyewitneses stated that the person was going from truck to truck,knocking on the drivers doors,requesting money in exchange for oral sex.Apparently this angered one of the drivers who was in his cab trying to sleep.The 6 foot 8 inch,400 pound driver,identified only as "Mud Duck Slayer,apparently thinking he was about to be robbed,pounced on the subject,and beat him sensless.The ignorant sexual predator managed to squirm free and flee to safety.He was heard screaming,"I only wanted to check your radio out,I'm going to tell on you,you brute".....more later

Whats the best way to hook up power?
direct from the batery or from acc from fusebox etc?
whats the best mic to use on an older uniden?
how should coax be ran?
does it matter where it is mounted in other words if it is directly under
the am/fm radio will it cause interference etc
basically I guess im asking for all the help i can get here to get the most
out of this
Thanks

As I reported earlier,Mr. Aaron H. Voobner was arrested recently for propsitioning a transexul prostitute,and pretending to be a snitch for the F.C.C.Also he was reported to be hanging around a truck stop soliciting gay oral sex and was assaulted by a very large truck driver.I approached Mr. Voobner after his release from and asked him if i could ask him a few questions.Wiping the residue of pepper spray from his eyes,Voobner became very irate and started to rant and rave about what calls "keyclowns",he stated that these so called keyclowns were making him abuse methamphetimines so he could stay awake long enough to scour the newsgroups and make his posts.He stated that he didnt have any friends and his mother died in prison some years ago serving time for child molestaion,which Voobner was obviously a victim of.I asked him why he would need a transexual hooker to fight the keyclowns he hates so much,he explained that since he didnt have any friends he would buy some .This reporter also asked him if he was the person that was beaten by the trucker,he stated he didnt know waht i was talking about,even though the evidence was clear by his bruised eye and fat lip that someone had beat him down like a little yapping dog.He became more beligerant by this question and walked away ,mumbling something about keyclowns.obviously Mr.Voobner has very serious mental issues that need to be dealt with. More to come soon.....

We have a person in our town that has a habit of falling asleep on the mike. He's done it on CB with a 500 watt amp in line and drowned out a whole town with the sweet sound of snoring (It's a wonder he didn't melt down the tubes), and also lately on 2 meter ham, on a (fortunately) simplex frequency. I always wondered how someone can really fall asleep on the key, but it must be possible.

I've also known a radio op who forgot to turn off the vox on his rig, and later at night we were all treated to the sounds of two people doing what they do best in bed.

I prefer

3) Think for myself.

Trust in those whose word is trusted. If you read between the lines, 'ol lie boy has just attempted to start something again between people here. He has tried with others and had his face rubbed in it, now he turned his attention elsewhere, which is his typical pattern after getting his ass kicked. Base your beliefs on what you actually see or hear,, not what someone else claims they said, ESPECIALLY 'ol lie boy.

Make sure you check your SWR before getting on the air. Mount the
antenna as close to the center of the roof as possible, if possible!

Good luck!

Well that explains the roof mount Quad antenna. Somebody else there had the
Doppler direction finding gear which uses the electronic spun antenna
principle. That's an interesting concept after reading the technical details
of how it works. I may have read about it in a back issue of QEX, or
Communication Quarterly. Now both magazines are known as QEX since they,
QEX, brought Communication Quarterly a little while back.

> If you don't want to be found, you'd better hope Phil's not the

afterwards.
> I haven't seen the video he has, but will eventually.

You may even see me in the video, depending on how much of the ground crew preparation is on the tape. You'll have to figure out which person I am. I'm not going to tell you. 8-)) I will give you a hint however. Look for the red Dodge minivan with the two big vertical whip antennas on the roof (the one in front is the 2m - 70cm antenna, and the rear one is for 6m). I run an IC-706MKIIG. Sooner or later I'll get my brick amplifiers for 2m (160w), and 70cm (100w) in there, right now they are sitting on a shelf at the apartment. There is also a big 70 cm crossed polarized Yagi satellite beam antennae mounted on a tripod behind the van, with the cable running in to the back of the van where the TV equipment is located.

> We'll probably link

> conversations we've had about my old Chris Craft (that was it's name),

'Cap'n Crunch', I normaly associated the handle with computer hackers who got in to phone freaking. In case you don't know the whistle that came in the box of cereal, by the same name, when used on the phone, was found to switch the phone line over to a long distance trunk line so the phone user could make long distance calls for free. Needless to say the phone companies put an end to that years ago.

> but he'd recognize the name 'Manitou'... he's tied up alongside plenty of times.
> 8 element quad... Hmm, I thought it was 6... don't really remember, but 8

Could be 6. I might have counted wrong. Anyway there was enough elements to look impressive.

> seems like it would be too wide to be useful while driving... he rotates it
> by arm from inside the van (I've been in on some hunts).

Yeah, I saw that. A big 6 inch bolt through the PVC pipe to use as a handle to rotate the mast. He also has one of those "push up" masts too, about a 30 foot job I think. He had it bolted to the back door of his van for the balloon launch.

> I use a 13 element
> 2m Yagi from home, but it's not up very high.. 25 feet or so.... at home
> Phil's got the same 13 element antenna up 70 ft... NICE!

Now if I could get the apartment complex I live in to let me do the same thing.....

Hi Aaron,

I understand the CB'ers are not supposed to be operating on this frequency and thus have no right to be there.

But I believe the ham operators who are attempting to jam them should also share the blame here. Part 97 clearly prohibits the transmission of music, sound effects, and one-way transmissions (broadcasting.)

So silly. First, no ham would be using voice down that low in 10 meters (even to warn intruders - sounds like a set-up to me). The simple solution for a ham would be just to send CQ until the required ID time - CQ sent in a digital mode. PSK-31 comes to mind, but I'd bet some old fashioned RTTY would tear the heck out of a higher power AM station. I remember good old Mike, W2OY. Yeah, he tried to jam me during a QSO on 75. His high power signal did a good job until I signed 73 in morse. Turned out the other op was a good CW operator, so we continued for another half-hour or so at 40 WPM. Mike couldn't bother us (I didn't even hear him). I'd stop every minute or so and open the bandwidth on the receiver and he'd be ranting about 'take those toys down in the CW band where they belong!'. Didn't have to, of course - CW was legal anywhere in the band. What is needed is a good CW contest on the low end of 10. Guaranteed, no AM station - even 5 KW - would likely get through that din (come to think of it, neither would an SSB station). Yawn. Of course, with the internet, if there was a big problem (mostly at the peak of the sunspot cycle) that continued, it's easy to DF from a given station and a dozen stations with reasonably accurate bearings might be a fair help (less, of course, on the 18 wheelers that are constantly moving). It is simply that not enough folks are upset - yet.

73 from Rochester, NY
Jim

Most CB amplifiers work like a champ at lower SW frequencies! Just be realistic with your duty-cycle vs. output power expectations. Also, don't use SSB for pirate radio - it makes music hard to tune in. I suspect if you keep your operation to the ISM bands nobody is gonna complain much.

or so I've read....

I'll grant you that Contest weekends tend to thin out the 10m interlopers a bit due to the QRM, but from what I've monitored on 28.085 (and several others) the illegals are not DXing but either sitting in a truck stop or only a mile or so apart on the highway..... It'll take a lot more than a contest or RTTY station to interfere with two locals yakkin' it up.

The same place that other slang comes from, Ed. Years ago, we had very different meanings for "cool," "gay," "bad," and a long list of other slang words used in our everyday language. Since everyday language continuously evolves, it is a little unrealistic to expect radio language to remain static. In fact, I'm fairly sure you were using some words four years ago that hams didn't use twenty years ago.

> [snip] After all, the rules for telephony
> state that we are to use plain language,
> not codes or ciphers. [snip]

But for anyone who uses a ham radio, QSL is about as plain language as it gets. And, the last time I checked, "contact" was in the english dictionary.

Wire direct to battery....use an inline fuse holder right at the
positive post for safety. If that doesn't work buy a filter cap
at RS ($12) made specifically for this purpose. It has wiring
instructions on package. Unless you are running a Ford I have
never seen this fail yet. If Ford, go buy Ford's noise supressor
for the fuel pump....that should do the trick.

Choices below.....
Assuming Flat land... no mountains or forests and typical suburban area...

If you're looking for more than a 1/2 mile or so, forget CB Handhelds
(besides... most bike ignitions will trash the reciever)..... with just a
rubber duck antenna, you'll be lucky to get a mile... you might get 4-5mi
with an extending whip antenna (but I can't imagine you using it while
driving) but to do so you'll have to run full power which'll eat batteries
up quick. A SSB model will be an insignificant inprovement and far more
expensive.

Swicth to FRS for up to 2 miles (and FM clarity, CHEAP too! also tiny size &
not too ruff on batteries)...

Think of possibly getting a ham license (Tech... EASY) and using 2m HTs or
440Mhz HTs (nowhere near as cheap as FRS) for up to 5 miles (HT-HT) or MUCH
further using Ham repeaters..... a Ham 2m mobile rig on a bike might get you
25-30 miles at 35-50watts if you've got room to mount it and amperage to run
it.

Exactly what type of communication link are you attempting to establish from
your bike?

Hey Toomanyradios, thanks for clarifying another of Dougies self-contradicting statements, even if you didn't mean to, otherwise I wouldn't of even seen it. HAhahah...he has warned us, threatened us, told us the Feds are coming, the hammies are coming, the cops are coming, the busts are coming, we are all going down, the comet's tail will destroy, there is no God, etc., and here, for all his infinite lacking of wisdom, he tells us, "expect to hear a lot more..." in regards to export radios. Hahahaha! We've been telling him that all along. Who said beating someone never worked? He finally listened. Poor Dougie. He tries so hard to be on the side that is winning. Flip Flop! Heheh!
I did go and listen in up there on ten after reading your post and all I hear is someone playing a recording of a sermon, or maybe it's a radio program being rebroadcast.

I believe Phil's set up for that too... I've seen some of those in action...
neat stuff.

BTW... this is for TIM.... The 10 element 10m Quad at Field Day was on a 50'
tower, not a mobile... although, the guy drove 4 miles with it assembled
atop his car to get it there... sure he got some strange looks. The 10
element 11m beam was behind a fella's house on a 50-60' tower. The 6
element 2m Quad mentioned is mounted on a full size Dodge Van on a rotating
mast through a bushing mounted in the vans roof.... the same van does have a
30' 'push-up' mast mounted on the rear... he uses it for a variety of
antennas and as a support for dipoles when camping.

You MAY need to look into your current requirements... what's your
alternator good for in that lil' van?
> 'Cap'n Crunch', I normaly associated the handle with computer hackers who
> got in to phone freaking.

Well.... I had the handle on CB almost 35 years ago (a bit before the Cap'n
Crunch of computer fame)... My old boat had no name until my Dad rammed a
dock when he borrowed it... 'Cap'n Crunch' seemed to fit and it stuck (there
was a 'Cap'n Crunch II' too). He was upset when I didn't name my latest
boat the 'Cap'n Crunch III', but I'd tired of the name.

> > I use a 13 element

> thing.....

Bummer... 13 elements lets me talk anywhere in the tri-county area and then some....
Using simplex FM and 25 watts.... Port Huron's a bit of a stretch, but been done (terrain plays a big role). Toledo's pretty easy, Canada's a breeze to a bit east of Windsor... Brighton, etc.... I don't DX on 2m though so these are all just casual contacts i 'happened' upon.

> alternator good for in that lil' van?

It should be fine because I have the factory 100 watt stereo system, electric seats and windows, rear window electric defogger etc. The battery and alternator have to be sized to handle that kind of load. I have 8 gage cable pulled inside up under the middle bench seat, and fused for 40 amps on both sides at the battery. Both amplifiers are medium low drive units (2m is 25 watts in for 160 watts out and the 70cm is 10 watts in for 100 watts out) so the current drain by the rig is low because I don't need to run it at full power to drive the amplifiers to full output. It also helps to keep the rig cool too. Each amplifier draws at most 20 amps, and I can only use one at a time with the 706 anyway.

# 1127. Re: I heard a CB'er on 20 meters

Newsgroup: rec.radio.cb
Date: 2001-02-08 22:18:56 UTC
From: Kevin Alfred Strom <kevin.strom@innocent.com>
Message-ID: <3A831B50.E4EB68FA@innocent.com>
Source record: 72857
Cross-posted to:
alt.discrimination,rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.cb,rec.radio.scanner

"QSL" as a synonym for "yes," or "message received" is very old,
perhaps almost as old as amateur radio itself.

But "contact," meaning "I want to contact you" is quite new, less
than a decade of commonplace use I think. I think it migrated to
amateur radio from the Citizen's Band, though I don't know if it
originated there, and I welcome corrections if I'm wrong. All I know
for certain is that it was almost never heard on the HF amateur
bands from 1968 (when I started listening) until the 1990s.

Personally, I feel that "contact" when used with that meaning is
outside the amateur tradition and also outside good English usage,
so I don't utilize it. The traditional amateur term is "break."

With all good wishes,

Kevin, WB4AIO.

From: Jerry Oxendine <joxendi@bellsouth.net>
Message-ID: <3A831E24.73CD@bellsouth.net>
Source record: 72859

Unh, unh, A ham can get on that frequency and send CQ all day long if he wants to as well as RTTY, etc. The music and voice transmissions are another matter entirely. Since 28.085 is a CW sub-band, phone is not allowed nor is music. However, a legally operating ham station can send CW (CQ de W4XXX) to his heart's content, OR have a CW QSO right on top of the truckers. Illegal stations have NO rights while the legal station is operating within the regulations pertaining to that band. Using a mode not authorized would get the ham in dutch as well. Here is another ham who is "guilty" of sending CQ on 28.085 and I'll do it again! I can't help it if no one "answers" my CQ. As to the illegal stations operating there, if I interfere with them, well, TOUGH!

Jerry

I currently use headsets and handheld FRS when my significant other and I ride together, both have our own bikes. I wanted to find something that I can use when riding with her and also when riding alone. I thought CB would be the way to go, but as I am seeing, not so. Any other solutions? How would a ham radio work? What sort of hookup is involved and how does the repeater work? Thanks for any more info you can provide.

Dont believe what you hear about handhelds,
i use a Cobra HH37ST in a Kenworth day-cab,it has provisions for a external speaker/mike and 12v. adapter so you dont need batteries.
I use a base-loaded 1/4wave whip with 9ft. of coax and a BNC to 259 adapter for the connection.
I talk 5miles easily with this setup.
Use a SWR meter to tune the antenna for best results.

As a practical matter I doubt Fat Cousin Charlie cares a whole lot about what gets done to the truckers but I would like to believe the amateur community could do it with a bit more suavity and classitude. If you have an ancient piece of gear that can do 850 shift RTTY you can bracket the offender off-center and sound like an explosion in a canary factory to an Ancient Modulation detector.

You won't QRM the two guys at the truck stop but it makes their radio experience less than pleasant.

Dick NBK

## 1135. My thanks

# 1139. Re: Antenna mounting?

Newsgroup: rec.radio.cb
Date: 2001-02-09 00:23:14 UTC
From: Mad Dog <lgssl@netzero.net>
Message-ID: <95vddo$iqgdm$1@ID-20128.news.dfncis.de>
Source record: 72870

1/4wave whips use the lower half of their length to operate.
Yes it's a good antenna,but the lower half must be unobstructed.
It would work best mounted on the roof,
i would use a center-loaded open-coil 1/4wave design or broadband antenna.
These arent quite as long as the classic bridge-banger and will give wider
bandwidth.
102" whips tend to sway and bend backwards at speed,this is a disadvantage
when
traveling because RF energy is radiated perpendicular to the antenna at a
angle less than 20 degrees.
In other words the radio waves dont go straight out in a circle,they tend to
drift upwards while going out.
Spend the money on your coax and antenna,this is the heart of any good
system.
Times LMR 240 is equivalent to RG8X but has 110% better shielding as well as
lower attennuation at 30Mhz. on a 100ft. run.
Choose your components wisely the first time and you wont have to upgrade
later.
Feel free to E-mail me with any questions.

I strongly suggest not using the fusebox or battery.The positive terminal on the starter is a high amperage connection without the corrosive gases present at the batt.

>
> --
Sir,,

You are wrong on the above. Besides breaking the law and interfering with legitimate communications of other domestic radio services, the "skills" of "freebanders" hardly qualifies them for the promotion of the welfare of the community--among other things. If that were true, how come when there's a disaster (flood, tornado, hurricane, etc) they don't call on the "freebanders" to help out instead of ARES, RACES, the host of hams who are not in the above organizations, and Civil Air Patrol? How come they don't ask for "freebanders" to pass traffic on 27.555 instead of hams on 3872 KHZ, or 14.300? In time of disaster, when other comms are down, more traffic is passed by HAMS than any other group.

All this bullcrap about ham radio being "dead" is wishful thinking, bud. And for every "bad" ham that "may" be heard, I can find TEN CBers just as bad or worse. BUT! Does that make CB itself "bad"? NO! For every ten of the "bad" CBers, I can find 20 good ones. For every "one" of the so-called "bad" hams, I can find 100 good operators. The FCC's return to enforcement is welcomed by the rest of the Amateurs and, we hope, that their activity will weed out the bad ops. The rest of us that get smeared by the activities of a few welcome the departure of the jerks. Same with CB: you can't judge the entire service by the antics of a few morons.

Heck, for all we know it could be coming from the contact managers everyone has on their computers today. Or it could be coming from the business world. I've noticed a lot of business people saying that today - the word "contact" both as a question and statement (meaning "will you contact..." as a question or "yes, I'll contact..." when answered back). In other words, who knows where this stuff comes from.

I have very dark window tint all over my car windows, and would like to use a through-the-glass antenna from radioshack. the instructions say to avoid this (i.e. use a non-tinted area), i'm wondering how much of a difference it will really make? should i pursue another route? do you have such an antenna going through tint and its ok? car is 97 corvette coupe, any other ideas on how to mount are appreciated.
please email me too.
rloebusenet@cticonsulting.net
thanks.

The issue is the TYPE of tinted glass, Randon. You cannot use a glass-mount antenna with passivated glass that has been impregnated with metal (plain tinted glass works fine with these antennas).

How can you tell the difference between normal tinted glass and passivated glass? Look around the edge of the glass for the manufacturer's stamp. Once you locate it, look for words that have to do with ultraviolet rays or the sun (solar, solarglare, solarclear, solarcool, sunshield, sunscreen, soft-ray, eze-cool, or similar words). If you find such words, you probably cannot use a glass-mount with this metal impregnated passivated glass.

If you want to be absolutely sure, you can always test the glass with a capacitance meter, or have someone else (radio or cellphone store) check the glass for you.

Luckily, on most vehicles, it is only the lightly tinted windshield and two tinted front windows (driver and passenger) that have passivated glass - the darker tinted windows in the rear of the vehicle are usually made of cheaper, not passivated, glass.

By the way, if any glass on your vehicle is passivated, the windshield almost certainly will be also, even if it doesn't specifically say so (some manufacturer's don't stamp the windshield for some reason).

It came from CB sidebanders back in the mid-70s or so. They wanted to
talk like hams, but they didn't want to say "break" because it sounded
too much like AM CBers, so they started that idiotic "contact" crap when
they wanted to break in.

When I want to break in, I just give my call letters. It gets the job
done, and saves time letting people know who's breaking in.

Theorecitally you could cut a small square in the tint the size of the
capacitive coupler,
this is the part that attaches to the inside of the window.
But like the other gentleman said if you special impregnated glass it would
work to no avail anyway.
Thru-glass antennas are not very efficient nor is any other antenna that
uses
a capacitive coupling such as a magnet mount.
If youre serious about the system i would suggest doing what other vette
owners do,
attach a piece of flat bar or angle iron to the frame (the frame is the
counterpoise)
that extends beyond the rear of the car and attach the antenna there.
The Firestik antenna company has a Corvette section just for people like
you.
http://www.firestik.com
Good luck driver.....

Center-loaded coils are a good compromise between top-loaded and base-loaded, but I think I would still choose a longer radiating element if at all possible rather than inducing any sort of loss. Your antenna is what transfers your signal from the radio to the ether -- I'd live with bending in the wind and scraping at the drive-thru!

Are there any limitations about who you can contact, or distance
limitations? I'm not talking about what is "possible", but what is
officially permitted. It would be an interesting comparison to the Part 95
rules here in the USA.

I am looking for 40 channel ssb Cobra, Uniden, or President base stations. As long as they are cosmetically good I am interested in buying them, working or not. If you have one that you would like to sell, email me at Wasupdare@aol.com. Thanks in advance.

# 1163. Antenna Rotator Question

Newsgroup: rec.radio.cb
Date: 2001-02-09 14:49:48 UTC
From: castlecra@aol.com
Message-ID: <20010209094948.14324.00000126@ng-fq1.aol.com>
Source record: 72894

Was throwing around an idea, and wondering if it would work.... I ran across a website that sells Yaesu Antenna Rotators.I found one, on a website, that is called a "Azimuth" (?). It looks as if it would rotate an antenna in a vertical circle, rather than a horizontal circle... It kind of confused me.. How could this work?? I was told it is used to rotate "Single" polairity beams from horizontal to vertical, and vice versa, using only a single feedline. How would this work?? Would you use a conventional-type rotor INSIDE the tower, to rotate the horizontal circle (parallel to ground), and use the Azimuth (somehow??) at the TOP of the tower to rotate the vertical circle (perpendicular to ground).. The Azimuth doesn't have a very strong windload capability (I think it MIGHT be like 8.5 sq. ft.), Please help me out here, I'm confused!!! I just DON'T see how this would work!

BTW: Planning to run JoGunn 6 element (square-boom) conventionals, on a custom-made stacking kit, made of schedule 40 aluminum pipe. (the mast is schedule 40 also) I am assuming this will be right around an 18-20 sq. ft windload, right at 60 feet, for the boom height..... just to give you an idea...., and YES, I do have a tower that will hold it......

Tell me how I'll be able to flip this thing over and be able to talk horizontal, while still being able to go back to vertical, with a single feedline, (besides the dual feedlines, that will be used for the stacking kit)

Who knows??? We might be able to salvage some intresting conversation out of this NG after all!!!!! Thanks for reading, and looking forward to some intresting replies..... Take Care,
WW373

HEheheeh! I agree, Jerry! If one had to rely on triple five in a life or death situation, the best thing to do to the patient would be to administer the Arizona CPR technique. This is when you lay the patient flat on their back, clear of any obstacles, gently tilt the patients head back with one hand, lean down near the ear of the patient, and whisper, "You gonna die!"

One of the reasons I left CB and went to amateur radio was because it was impossible to have a conversation with someone without being interrupted. At that time, the CB rules said that you could hold the frequency for no longer than five minutes at a time. Amateur radio had no such restriction. In amateur radio the frequency was yours as long as you identified properly - and it still is that way. It is good operating practice to pause between transmissions so that emergency traffic could gain one's attention, but there is no reason to wonder if someone else wants to use the frequency. Besides, all they have to do is announce their callsign and say, "for a quick call". I would certainly yield the frequency until the two amateurs relocated to another frequency.

Lately, the ham bands are becoming more and more like the CB band with constant, rude interruptions. I can only suspect that it is the influx of rude people, but not necessarily CB'ers.

As far as being in the wrong hobby is concerned (addressing another poster's reply), I think we all bring our own expectations to amateur radio. Whether I like being interrupted or not, people will do what they will do. But I can handle it. Sometimes the interruptions even turn out to be positive and I end up making a new friend in the process.

This is just a hobby. Nothing stays static, not amateur or CB radio. To expect it to remain the same is unrealistic. But I don't think it hurts to discuss the changes from time to time.

Yes, you need another rotator for the horizontal circle. I believe the
azimuth rotor will bolt onto the standard Yaesu rotator.

>The Azimuth doesn't have a very strong windload

Custom made???? Your staking kit must be wide enough in order to get
the full gain from stacking. If you have long beams then your stacking
kit must also be made long. The width of the stacking kit should be
wider than the length of the beam.

>Tell me how I'll be able to flip this thing over and be able to talk

comment:

> Hi Ed. Thanks for sharing your views. I personally feel that a hammie
>OR cber that yaps and yaps for an inordinate amount of time without
>ASKING to see if anyone else wants to use the frequency is rude.

response:
There is NO need to ask if anyone else need to use a frequency. YOu
check before going on a frequency to see if it's in use. If clear it's
all your's. There is NOTHING rude about using a frequency for long
periods of time. >>

my comment:

In Las Vegas, the national calling frequency, 146.52, is used for late
night ragchewing by a regular group with the hope that visitors monitoring that
frequency will join in. Regular practice is to ask, every 15 minutes or so, if
anyone needs to use the freq. I've never seen a problem with relinquishing 52.

The procedure to join a conversation is to drop in the word "break" and
when acknolwedged, give a callsign. I'm told that in other places, "break" is
used for emergency traffic only.

CastleCra,
They're normally used to 'tilt' antenna arrays for moon-
bounce, and satelite stuff. The antenna's boom, or the boom
holding arrays runs through the rotor. I suppose you could
use it to change polarity, but seems like an expensive way to
do it...

My understanding is not all countries keep the phone section of the band separated from the CW section. So it is possible to have voice transmissions legally on the bottom end of 10m. The question is which countries allow this, because the USA does not.

And you are entitled to such belief, Vickers. Beginning of my post stated, "I PERSONALLY feel.....", and an opinion is not wrong or right, it simply, IS. I still feel that way. I listen to hammies carry on forever, sometimes it seems, and I have heard folks make their presence known repeatedly and be ignored, like the hammie has exclusive squatters rights to that frequency and only talks with other members of his clique, and it happens on cb also. I did not mean to imply that it was rude to use the freq for long periods of times, only to use it and not acknowledge others. Legal? Sure! Rude? You betcha!

Hello Christopher:

Hy-Gain now owned bt MFJ will sell you the orginal assembly
instructions, and probably has some spare parts from their Ham Beam
Antennas that will work on your 5 element beams, should you need them.

What is it you need?

Here is Hy-Gains web site:

http://www.hy-gain.com/hy-gain/index.htm

Hello Sigma 4:

I have not herd of the "BIG MAC" can you send me a scanned copy or photo
copy of this antenna spec sheet?

I make 5/8 wavelength ground plane antennas for different frequencies,
and I have aluminum tubing in stock, and if I had the dimensions, or
maybe even a photo, I might be able to make this antenna.

Good points. I would add that on CB it probably a much "bigger deal",
simply because CBers are limited to 40 available legal frequencies,
while ham radio has literally millions of available legal frequencies.

# 1186. How many Newsgroup members does it take to change a light bulb?

Newsgroup: rec.radio.cb
Date: 2001-02-09 21:28:05 UTC
From: Richard Smith <rsmith@NOSPAMplaneteer.com>
Message-ID: <VzZg6.2066$D3.8824@tor-nn1.netcom.ca>
Source record: 72815

A little off topic humour.

Cheers,

Richard
~~~~~

Q: How many Newsgroup members does it take to change a light bulb?
A: 1,331

1 to change the light bulb and to post to the newsgroup that the light bulb has been changed.
14 to share similar experiences of changing light bulbs and how the light bulb could have been changed differently.
7 to caution about the dangers of changing light bulbs.
27 to point out spelling/grammar errors in posts about changing light bulbs.
53 to flame the spell checkers.
156 to write to the newsgroup complaining about the light bulb discussion and its inappropriateness to this newsgroup.
41 to correct spelling in the spelling/grammar flames.
109 to post that the newsgroup is not about light bulbs and to please take this posting to alt.lite.bulb
203 to demand that cross posting to alt.grammar, alt.spelling and alt.punctuation about changing light bulbs be stopped.
111 to defend the posting to this list saying that we all use light bulbs and therefore the posts **are** relevant to this mail list.
306 to debate which method of changing light bulbs is superior, where to buy the best light bulbs, what brand of light bulbs work best for this technique, and what brands are faulty.
27 to post URLs where one can see examples of different light bulbs.
14 to post that the URLs were posted incorrectly, and to post corrected URLs.
3 to post about links they found from the URLs that are relevant to this list which makes light bulbs relevant to this list.
33 to merge all posts to date, then quote them including all headers and footers, and then add "Me Too."
12 to post to the list that they are unsubscribing because they cannot handle the light bulb controversy.
19 to quote the "Me Too's" to say, "Me Three."
4 to suggest that posters request the light bulb FAQ.
1 to propose new alt.change.lite.bulb newsgroup.
47 to say this is just what alt.physic.cold_fusion was meant for, leave it here.
143 votes for alt.lite.bulb.

I don't think you can get away with it. Friend of mine was going to stack a pair of Signal Engineering 6s, the weight was okay for the tailtwister, but it would have to be set on the tower with a crane. The 'load' of the combo would probably be around 20 alright, but how would you be able to get the 'bottom' antenna (horizintal) far enough away from the tower so as not to hit it?

Oh, but if you ARE breaking the law, your license doesn't mean squat, it does not exonerate nor entitle you to any special law breaking exceptions. Matter of fact, you're an easier target, IF you choose to operate illegally in any manner, and the penalties remain.

# 1192. Ham International " Big Mac " 7/8 wave

Newsgroup: rec.radio.cb
Date: 2001-02-09 23:05:07 UTC
From: Sigma 4 <sigma00004@hotmail.com>
Message-ID: <981759752.15054.0.nnrp-12.c2de0ed7@news.demon.co.uk>
Source record: 72819

I am looking for any information on an antenna called a Ham International "Big Mac". This antenna was manufactured in the early 1980's by a company called " Jide communications " in Belgium / Netherlands

I've been searching for this antenna for over 6 years. My mate had one back in the early eighties and it really did kick ass.I always wanted one but didn't have the space for this beast. I had the HAM Thunderbird plus also the
HAM Sexy 6/8 (3/4) wave but none of these 2 could touch my mates Big Mac. If only someone would start to manufacture them again!

I have original spec sheet for the Big Mac but don't know anybody in the land
who has one now. Even the guys in Belgium don't have them now. I also had the
HAM catalogue too.

Is there anybody out there who has one or knows someone who still got one, either up or down?????

if anyone has any info I.a. Spec or dimensions, or even, in a rare case
, has one.
Please reply

P.S . Sorry for anyone who replied to the last post. I missed it. Please reply again.

Source record: 72822

>It looks as if it would rotate an antenna in a
>vertical circle, rather than a horizontal circle... It kind of confused me..

This is not designed for the purpose you intend. Such configurations are used for beams with much smaller wind loads, and are useful when using satellites (manmade and natural) for communications purposes.

However, there IS an advantage in being able to switch from vertical to horizontal polarization on 11 Meters. Frequently, one component of the signal fades while the other remains strong. (And a few minutes later, the situation may reverse).

CB operators approach this problem/opportunity in a variety of ways. One is to use an antenna with two sets of elements interlaced along a boom--one set vertical and one set horizontal. A switch at the operating position allows one to flip back and forth quickly to follow changing conditions.

Another approach is to use a Quad antenna. You have seen this in Moonrakers. A quad is a wavelength of wire formed into a square. The elements may be "squared" with the Earth, or diamond shaped.

Quads have both vertical and horizontal characteristics, so there is less fading--without the hassle of throwing a switch every few minutes. However, they are awkward to erect and they don't tolerate ice storms very well.

Quads were perfected and used with great success by engineers at shortwave station HCJB (Quito, Ecuador) many years ago. Since then, they have earned a great reputation on 20 Meters and above.

CB operators have been especially interested in antennas for a very good reason. When you have only one band, you need a station that operates at peak effeciency. Unlike hams, you can't just "drop down to 20 meters" when signals on the higher frequencies begin to weaken.*

Many ham operators use CB antennas on 10 meters (adjusting the length, of course--10 meter antennas are slightly shorter than 11 meter antennas). By using beams or A-99's or Wilson 1000s, hams take advantage of the research that went into the CB antennas. Make no mistake--a single-band antenna tuned for maximum performance is HOT!

QRM

*As you go higher in FREQUENCY, the number for METERS goes down. Thus, 20 Meters is a lower frequency than 10 Meters.

Great work, Richard! Right on target......except:

You forgot two of us who will be checking with Riley Hollingsworth to see if light bulbs are legal.

One of us will be questioning how much power the light bulb is allowed to have.

Four of us would like the mod for the light bulb, if you have it. Thanks.

Leland, you are, of course, correct. I should also mention that for one to attempt what I suggested would REQUIRE you to ensure that the station is not a station licensed for the service - otherwise you would be intentionally interfering with it. However, unlicensed transmitters may not cause interference to and must put up with interference from licensed primary users of a frequency. A point which I failed to make and I thank you for pointing out the fact that the US sub-bands are not necessarily the same as other countries!

Thanks,
Jim

You will go nuts with this feature. It gets rid of the Scanner Dweeb
announcements, assorted pleas to visit websites, 25 year-old books that
weren't that great to begin with, any message with FA and FS in the title,
etc, etc, etc.

On some NGs I have achieved a 70% kill ratio with no loss of intelligence.
God I love the digital world!

Hi there,
I am selling a pair (or sell seperatly) of Cherokee AH-27 hand held CB
radios
they have 120 channels. 40 above and 40 below..
they are small and have lots of features like scan,last channel
racall..etc..
they are in good condition and have had very little use.
comes with antenna and battery pack.
Asking $75 each plus $5 shipping
Thanks-Russ

Actually many truckers come here and these alternators can power the fridge
microwave etc and help heat food for homless children deprived of govenment
funds because the FCC's budget is so bloated.
Please Help save the children:(

> 
Wrong. Although a license does NOT allow you to operate illegally as you correctly imply, it DOES mean that enforcement can not be done at a local level. I believe (and I am not a lawyer - if there are any lawyers reading the thread, we'd love the input) that one couldn't sue a licensed station (say as a nuisance) as (again, I believe, but am not sure - input would be appreciated from someone who could provide it) the case would not fall under local jurisdiction. No, a license does not allow you to do as you please (a broadcast station couldn't broadcast on 11 meters), but any alleged wrong-doing must be persued by the FCC, not the locals.

Not an argument from me James, I think you misunderstood or read too much into it or something, what I said was, the penalties remain. Maybe not from a local standpoint, but they remain, nonetheless. I wasn't talking about suing someone when I referred to penalties. I also would like to hear from a lawyer out there (wasn't Phil a communications lawyer?) concerning a nuisance, or better yet, a disorderly or disturbing the peace charge...a local here was slapped with a disorderly fine after being taped repeatedly utilizing rated x language while blowing a filthy 500 watt base amp night after night. Local cops heard the tape, cited him, and that was that. Maybe, just MAYBE a hotshot high end attorney can have a field day with this, but the good 'ol boy network prevails here. On one hand, we got cops with linears, on another we have the same cops busting these folks! It's who ya' know and where ya' live until some kind of standard precedent and protocol is set and followed.

A double break ("break, break") or triple break used to be used to
indicate priority or emergency traffic. The FCC doesn't have any
guidelines on the matter.

With freedom, comes responsibilty. Freebanders aren't acting responsible
when they interfere with other communications services. It's the "yelling fire"
cliche.

I do, however, have a problem with the FCC telling me what topics I may or may
not talk about. Example: During an interview several years ago, an FCC official
said that discussing controversial subjects over the amateur frequencies
basically violated 97.1(e), because such subjects, as he put it, "did nothing
to enhance international good will."

This is a regional thing. I don't remember any SSB CB'ers using "contact" instead of "break" in the 70's (Washington, California, or North Carolina). And I haven't heard a single ham operator around here using it today, but I did hear it one time in Washington state recently.

Because it is so regional in nature, I really don't think we can so easily blame this on "those CB'ers." Instead, I suspect this is coming from somewhere within the ham community itself, or coming from plain language outside of radio.

> When I want to break in, I just give my

Most people do that, but I don't know how much it really saves time by letting people know who's breaking in. In my case, unless I already know the person (and callsign), I rarely ever catch the callsign of those breaking in this way.

: Custom made???? Your staking kit must be wide enough in order to get
: the full gain from stacking. If you have long beams then your stacking
: kit must also be made long. The width of the stacking kit should be
: wider than the length of the beam.

Uh, the length of the antenna should not matter on stacking width.
You want the signals to be in phase for the two sections, which is
independant of the length of the sections.

>You want the signals to be in phase for the two sections, which is
>independant of the length of the sections.

Uh, the length of the stacking bar is optimum around 5/8ths of a
wavelength. This is as long as you are using short beams. When the
length of the beam becomes great as in a 40 foot six element
arrangement then the stacking bar must be lengthened in order to get
your optimum gain.

The reason for this is that with a long boom antenna, beam number ones
driven or first director may be influenced by beam number twos last
director or directors and skew or widen the radiation pattern. This is
unwanted. Far field addition of the electric field is preferred to
close
proximity mis-directed skewing by the second antenna. This skewing
does not come into play with shorter boom beams because the angles are
greater.

The JoGunn antenna that he has is 26 feet long. This is very short for
a six element beam. He can use the 5/8 dimension with these beams.

Russ,

You know those things will go 200 channels
and operate on fm too, don't you?

Leland,

Good question! I would also like to know
if their 40 channels are the same as ours,
and if not, what are they?

Hello,
Excuse me but this is a crosspost, i did not get any answer on
rec.radio.amateur.equipment.
I have a SWL receiver: SOMMERKAMP FRG-7000 with the frequency display always
off. I just have the schematic for the receiver portion and it is very
difficult to investigate in the frequency display portion without schematic.
Could someone scan the schematic of the "Counter Unit (PB-1754)" and send me
a JPEG file by email.
All experiences in maintenance of this part are welcomed.
Thanks in advance
Yves

Hi all, we had a local get sued by his neighbors for his all day all night profanity coming over all of their electronics. The best one was when he sang nine hundred nighty nine (999) bottles of beer on the wall. He passed out when he hit 127. You can try to get an archive of it from http://www.columbian.com which is our local newspaper.
After it all said and done he did a ton of community service and had to pay the neighbors over the civil suit.

## 1232. Cobra 142 base

Newsgroup: rec.radio.cb
Date: 2001-02-10 11:38:44 UTC
From: maniac9188@aol.com
Message-ID: <20010210063844.03003.00000308@ng-cs1.aol.com>
Source record: 72913

There is a local guy around me, that collects vintage radio equipment..... He has it all... I asked him if he would consider selling one of his radios, and he told me about this Cobra 142 base. He says he has the original box, with all packing materials, along with the owners manual. He says it hasn't been out of the box for about 5 years, and has never been opened up (peaked). He says he talked on it for about an hour( total ), since it was bought.... He says he will sell it to me for $150.00. How good is this radio?? does it compare, at all, with the 2000 base??
Just wondering if this is a good deal, or not..... Thanks

Maniac.

Source record: 72914

It doesn't really compare to a 2000 as that radio just did things a little differently. In the 142 , you are for the most part talking about a 148 in a big package.
Train

Hams can legally transmit over the illegal ops, since they are not
supposed to be there in the first place. The FCC even says it's o.k.

Hams can legally transmit over the illegal ops IF they are engaged in QSOs or are attempting to contact other hams. Hams can NOT broadcast music, sermons, sound effects, random tones, etc...regardless of the purpose. Read your Part 97.

Yup, I agree -- to an extent. When's the last time you
heard "frequency in use?" before the CQ? When's the last time you've
heard a significant pause when turning over to the other person, to
allow other operators to jump into the conversation? Something we all
should remember. Ham/CB ain't cellphones, it's a big party line.
That's what makes it such a great hobby. Kinda like Internet forums,
heh heh.

My killfile on this group is huge. When the reader comes up and it and
say's for example 60 messages, by the time the filters are finished there
usually is only half the messages left.

I noticed a couple more unsolicited testimonials for the quality service at EEI. I also noticed that they came from anonymous writers using anonymous emailers. Since I don't recall seeing anything like these coming from what might be considered 'real' people, I'm just wondering if the 'CEO' has opened up another account at AOL?

Glad to see seabag lawyering is not dead in the ham bands.

The biggest issue is that 28.085 is a narrow bandwidth frequency so tones, voice, etc. are not allowed. I don't think Riley particularly gives a shit but it is far more fun to interfere with legal stuff, wide shift RTTY, PSK31, even a really chirpy CW although that is stretching the rules a bit. One man suggested SSTV which will be effective if not, unfortunately, within bandwidth rules.

At the bottom of all this is that the dump huck truckers do not have the slightest idea they are in a ham band or for that matter what frequency they are even on -- or for that matter what frequency is to begin with. They are on Channel 19 up two looking for the private channel. The combined forces of CB Inc and the golden screwdrivers take the money and run. It is frustrating not to be able to come up with 50kw of Ancient Modulation and 'tell' them they are on an Amateur freq. Just what effect this bit of knowledge might have on them is another question; expecting them to see the light and repent having paid for the channels is expecting a hell of a lot.

Yes, I have been known to dump a signal on 28.085 or thereabouts with no particular intention of initiating a QSO but accidents happen. I don't see a lot of sense in interference per se for the reason I mentioned above, so 085 sounds like other parts of CB -- BFD.

This will end when we get serious about equipment. Unmodifiable radios have been built (Radio Scrap 10 meter rigs are shining examples) and should be required. I have long advocated opening up the 59 channels to 27.995 at a more realistic 25-35 watts but at the price of outlawing Antique Modulation outside the legal 40 and quite possible right up to 29 MHz. I have nothing against Ancient Mary per se but in the hands of bozos

it is a dangerous weapon.
I am not impressed that the later Japan Inc. Amateur transceivers are even AM capable.

Given that I live on the I-80 corridor I think my main contribution will be to see my state legislator (Nebraska only has a one-house unicameral legislature) and see about statewide adoption of power and freq regulations that is now allowed. When the truck inspectors can support themselves -- inspection fines go to the schools in NE -- and a few national trucking companies find their trucks impounded for a while, the BS will come to an end in short order.

Thanks for the replies, gentlemen. I'll be happy to answer them as best as I
can. We have forty CB channels, the first one being 26.965, and the highest
27.405, no A-channels like 11A or 3A etc. No modified ham rigs!!!
Four watts of carrier wave into omnidirectional antennas ( the five/eight is
a very common one, and helix antennas for mobile use). All communication in
CB radio must be between either a mobile to mobile or base to mobile or vice
versa, so, if you're real careful, you can't work from one base station to
another one. Also all QSOs must be within the territory of Finland ( between
Sweden and Russia, by the way, pop. 5 milliion, hi) Nobody really cares if
you work a European station if you stick to the legal channels.
Any further questions?

73, Gary, oh8mfh

Gary,

You wrote,

Four watts of carrier wave into omnidirectional antennas

Forgive me for appearing dense, but you did say sideband,
didn't you? There is no carrier power on ssb so I assume
you mean 4 watts pep or something like that, right?

Message-ID: <de0b8tg3bf6i20psb0or90h0g8um0mfoq7@4ax.com>
Source record: 72941

Greetings!

Well comparing the Cobra 2000 to the 142GTL - is like comparing Apples to Oranges, they're both fruit (radios).

The Cobra 2000 has a few extras, like the clock, freq counter, and in some cases, the MB8719 - otherwise you'll get the MB8754 PLL chip instead.

Not a big deal for some.

The 142GTL is a lot like the larger footprint brother, only in a smaller case style and lacks the clock/freq counter with extension speaker combo.

The other drawback is a smaller power supply in the 142. It is perfectly capable of handling the current-munching needs of the stock version, and the larger variety of audio and channel mods that are popular with the mobile 148GTL.

As far as boards? Quite similar, although layouts are slightly different. The 142GTL is a lot like the 148 - the 2000 has a few extra beefier parts that they didn't put in the 142GTL.

Once again, not a big deal for many people.

As far as comparison? You'll do fine with the 142 - the larger brother has a certain "Vintage Collectors Item" aire about it. But you also pay a higher price for a similar radio that nearly has all the same parts as the smaller brother.

Granted the case designs are different - but the overall boards are almost identical. Some changes to the power supply feed, and the AM regulator sections between the two, but little else, except for the added console space taken up by the clock/freq counter and the external speaker.

The original manual, and schematic, will top-off the deal at $150.00 but no more than that.

Pretty good deal I'd say. But try it out first, even on stock parts, have someone with SSB capable radios listen to you talk on it first. Any signs of warble or shift/drift while QSO-ing on it may be a sign of a weak power supply or poor filter/regulator. Scratchy sounds while adjusting mic gain during TX, or volume while RXing, or erratic Voicelock sounds while attempting to clarify in someone may indicate some dust or dirt, or something more serious. Listen and work the radio while you operate SWR/SWR Cal, Mod, NB/ANL switches. All should

work well if it's "right out of the box" as they claim.

On 10 Feb 2001 11:38:44 GMT, while the modem was ice fishing with the
Mouse, maniac9188@aol.com (Maniac9188) dissertated the following:

:+> There is a local guy around me, that collects vintage radio equipment..... He

Discussing controversial subjects! Gee sounds like "no political dissent
allowed!"
Of course Hams will willingly bend their knee and kiss ass.
Freebanders will carry on and will remain THE LAST BEST HOPE FOR FREEDOM!!!

btw most freebanders have equal knowledge in electronics and SUPERIOR
knowledge of human freedom.

....act irresponsibly and break the law.
Adolf Hitler-1935

It makes no sense to blame "export radios." Anybody can buy an FCC approved
radio with 10 meter access. Radio Shack has them for as low as $140.

It is illegal for an individual without an appropriate license or privileges
to operate on 10m. Export radios have nothing to
do with illegal operations on 10m.

WC1J

Go ahead, Voobner. Narc me out to the fcc:

# 1270. STORM THE ILLEGAL FAGGOT KEYCLOWN!! BUSTED SOON!!!! YAHOOOOOO!!!!!!

Newsgroup: rec.radio.cb
Date: 2001-02-10 19:14:08 UTC
From: No User <no.user@anon.xg.nu>
Message-ID: <0f469c8c0551e5f4d739b372272055e7@anon.xg.nu>
Source record: 73001

FOR PERSONAL RECOMMENDATIONS, PLEASE SEE OUR VALUED CUSTOMER WEB PAGE
LOUD CROWD MEMBERS WILL HELP YOU AS WELL ON THE LOUD CROWD MESSAGE BOARD

Please read Frequently Asked Questions
before contacting us

Amps:

How do you tune the amp?
Storm built amps are Class C modulators and are to be tuned with
modulation for max output. Not all amps have tuners installed and
must be tuned with the dial-a-watt or high/low power capabilities in your radio.
SWR should swing backward.

How many amps does the Cyclone small draw?
The Cyclone small draws approx. 70 amps with a low carrier and
80 to 90 amps with a high carrier. Any amp with a built in driver
will draw max amps with a high carrier. See individual amp
pages for amperage draw, then calculate by number of transistors.

How many amps do the base units draw?
The base units are designed with sufficient amperage supply
so this should not be a concern.

How many watts can I put into the Scorcher medium?
The max input wattage is presented on each amp page. Calculate
watts by number of transistors. Units with drivers must be
calculated on the driving section only.
(Example: the Cyclone small has a 3 watt max dead key limit)

What gauge wire should I use to install the amp?
Use 10 gauge or larger depending on the size of the unit. Units
any larger than a 4 pill should be installed with 2 to 6 gauge wire.

Can I plug the amp into my cigarette lighter?
Keep in mind the amperage draw of these units. Only the smallest
unit could be considered for a cigarette lighter plug.

What is the physical size of a Heat Wave?
Our amps are 7.5 inches wide, and 3.5 to 4 inches tall. The length
depends on the number of transistors. The Heat Wave is approx. 12
inches long.

Do I need a fan with my Monsoon?
If you plan elongated keys for periods of 20 to 30 minutes, like
a good DX session, then you need a fan. If you talk

in short sessions, you could get by without it. For experienced operators this is a personal preference. For less experienced persons, it is advisable to use a fan.

Can I run the amp on less than 12 volts if my batteries get low?
NO!

Can I use the Whispering Wind to drive my Texas Star?
Any amp that is capable of being driven may be driven with our Whispering Wind. The size of the WW depends on how much drive you need. Tuning required.

Flatline Antennas:

What model Flatline is best for me?

This is our most asked question. Without seeing your rig, this is rather hard for us to say.
Radio, coax, mount, clearance, operation preference and many other factors have to be taken into consideration.

Ask your tech. They can help.

We have pictured several different types of mounting configurations in the Flatline Photo Gallery
so you can get an idea of what you can use. Big rigs, Nissan, Mercury, Dodge, Ford, Chevy, Izuzu, vans, trucks and cars are all pictured in the gallery as well as single and double coils, round and flat and single or co-phased setups are all pictured here.

The Plymouth Duster with the F3L shows a ball mount. This setup talks skip and local easily, and is designed for both. We also pictured our round coil antenna for those of you who do mostly skip talking. The picture in the Dodge photo gallery of the

> Please Help save the children:(

Sir,

All your posts only show how ignorant you are of the nature of radio communications, the need for regulation of its use, and your total lack of knowledge of the FCC's budget. It is the very LACK of funding for FCC that causes "freebanders" and amps, and other illegal activities to flourish. If FCC had a "bloated" budget, there WOULD be MUCH more enforcement than there is now.

Jerry

# 1280. Re: Cobra 142 base

Newsgroup: rec.radio.cb
Date: 2001-02-10 20:25:07 UTC
From: Five Watt Wizard <golden-eagles@juno.com>
Message-ID: <t8b8t6makqp771@corp.supernews.com>
Source record: 73011

Seems like all of you left out (to me) the most important part. You can compare the Uniden Washington (which is still made & sells for about $190.00 new) to the Cobra 142GTL because they are the same radio on the inside. The receiver is different in the Cobra 2000GTL, the Uniden Madison & the 148GTL. The Washington & the 142GTL are a single conversion radio & the receive is cleaner in a dual conversion type. I have found that the noise filters in the dual conversion type work a little better too. I say this only because this is also a reason there is a price difference in the radios that you are comparing. Some look for features & some for performance. All in all, $150.00 for a collector quality radio ( in the condition stated) these days is a good deal! Just for FYI; I also believe that the cobra 2000 came with a MB8734 chip from the factory...

This is easy to answer.

Getting an auction canceled is secondary. Gloating is primary.
These actions come from an feeling of insecurity. This condition
exposes itself in this apparent self satisfaction you see in these
type of posts.

Eventually, as the saying goes, he'll go blind.

> another one.

Is there any "official" rational for the "base-to-base" communication limitation? That seems strange to me.

Also what modes are permitted? In the USA only AM and Side Band is permitted on the 11m band. No digital transmissions of any kind is allowed, except on the new "MURS" VHF CB Radio band created last November.

You also mentioned "helix antennas for mobile use". Can you explain that in a little more detail. I would think a Helical Antenna" for 11m would be extremely large, and not something you would drive around with on a mobile.

Actually, if I remember right, the 148/Grant and 2000 shared the dual conversion setup, the 142 is a single conversion board and is the equivalent of the Washington and some of the other 8719 boards.

> Canada for one.

I looked in the RIC-2 document, and for region 2 (schedule 1 on page 6) the maximum bandwidth listed for 28.0 to 29.7 MHz is 20 KHz. That would seem to suggest you can even use FM anywhere in the Canadian 10m band. Is that correct? I don't have any detailed band plans for Canada in my notebook. Since being in Detroit, across the river from Windsor Ont. Canada, Canadian Ham Radio regulations are of interest to me because I get travel in Canada every once in a while.

I also heard there is a movement to change the CW testing requirements for Amateurs in Canada too. What's the latest news on that?

Bill.....I ONLY go into specifics in e-mail when discussing radios.
There are plenty of people out there to give erronious info to the group at
large. After many years in this group you learn to keep it general to the
group and get specific with direct questions answered in mail.

Would only be a violation if the variable was capable of EXCEEDING 4 watts
drive.

Forgot to throw this in,the 142 is a nice radio,I think with a little shopping you could find one,or a washington, etc., for a bit less, the Web prices are stiff but $100 should be enough to get you a good 142 or similar radio.

Bill wrote in message ...
>Actually, if I remember right, the 148/Grant and 2000 shared the dual

Might I just make a small suggestion?

Either change the colour of the text or remove the emblem from the
background. I dont know about anyone else but I find it bloody hard to read.

Since all you NGer's both CBers and Hams have not noticed, there is no one on either side of these issues left on this NG that gives a Damn. All hobbyist on both sides have been long gone and all of you are talking to yourselves over and over and over. As far as the feds go, my brother has been with the FCC since 1978 (Based in D.C.)so I contacted him in regards to all the e-mails that are being sent to their offices in regards to CBer's by Boobner and the rest. He contacted those in the know and he was told that these e-mails are being disregarded do to the total number of emails coming from the same sources and that they are considering mailing official letters to the senders to stop the massive influx of e-mails to their offices. He said that they are becoming very annoyed by these e-mail and do not find it helpful in anyway to have this amount of email filling their email boxes. So even Boobner and the rest are talking to themselves when they e-mail the FCC. So talk, talk, talk because there is nobody left to hear.

Oh..By the way I have been a Ham since 1968 and I am in no way impressed by the profanity of Boodner or like and they in no way represent the true Amateur Radio Operator. When they have the years in this hobby that I have, maybe I will give a sh_t of what they have to say. As of now they are just an embarrassment to the hobby I love.

Never..Ever...To post again.....Kyle

Yep, finally. A satisfied customer. I just have to wonder though. Look out now, I have an attack of logic coming here.They do their business exclusively on the internet, right? (they don't have a street address you can drive to; no retail space at all apparently) So if someone is interested in CB radio, they might find their web page and several others and buy something, but they might not stop there, but go on to news groups like this one, right? Certainly not all, but a healthy sampling anyway, right? So, if that was the case and they were selling millions of dollars worth of merchandise out of their warehouse then there would be thousands of customers, most of whom would be satisfied with their service and anxious to learn more about their hobby by reading and posting here. If the company sold a million in retail, and each customer bought $500 in retail on average, that would generate 2 000 customers, and if 5% of those customers gravitated to this news group, that would put 100 people here reading and defending EEI for their gracious support and good dealings. Since their business dealings have hit the fan, we have seen one legitimate customer come forward to say that they bought something, were treated properly, and generally got a good deal. Goodness, even Stephen Fowler had a better track record than that. And if no more than a handful of customers have gravitated to this newsgroup, why is it that the CEO has the time to respond to every post, and often in such tactless ways? In other words, if his customer base is not here and has never been here after millions in retail sales, why does he get excited about the goings on here and how we feel about his business practices? I submit that the NG readers are intelligent enough to draw reasonable conclusions.

I am so impressed by your math. You are a god of mathematics. Let me
give you some of mine. If one out of a 10,000 Cber's read this newsgroup
it would be a miracle, since this NG is just a pissen match for people
with to much time on their hands. Those that like to post comments like
yours are to make yourselves feel superior to those that read this NG.
And since you talk with so much ego and are so impressed with yourself,
it has been my experience that those such as you hold hourly positions
making low incomes and so you must feed your low self esteem with posts
like above to help us common folk. In other words, I do not need your
help in making buying decisions, we hillbillies does alright by dem
selves...ASSHOLE......So Fug off!

# 1316. SWR MYSTERY!!!

Newsgroup: rec.radio.cb
Date: 2001-02-11 03:19:57 UTC
From: John Daspit <john.daspit@lasp.colorado.edu>
Message-ID: <3A8604DB.4634998@lasp.colorado.edu>
Source record: 73099

So I spend all day installing a 108-incher
on the driver's side of my fiberglass topper,
just behind the cab, on the side of the topper,
near the top of the topper, just in front
of the aluminum frame side window of the
topper. Following all "rules" I've ever heard of
or read about, I ground the shield of my coax to
the window frame, then continue a ground wire
(large) to a screw onto the chassis (the big one that
holds the metal tie-down on). I have a 2.5 to 3:1
SWR. (ugh). So I disconnect the chassis ground, and
only connect the shield to the window frame
(which is electrically isolated from the chassis
by the fiberglass topper walls).
NOW, I have GREAT SWR, 1.6:1 on channel 1,
1.2:1 on channel 40. I SEEM to be getting out
OK (I talked to someone VERY far away).
The QUESTION:
My window frame is only 4 feet long, 1 foot
high, and 1 inch deep, is that enough of a ground
plane?? Is my low SWR an indication that there's
some kind of "apparent" ground plane happening?
Chassis ground only without the window frame
connected is still bad. What's going on here???
I want a full-length whip for the bandwidth, but
what's the best way to mount it on a pickup/topper?
Do I need to glue aluminum foil to the inside
of the topper's roof? (No, I'm not kidding) :-)
Any and all comments/suggestions welcome, thanks!
JD

Craig,

I believe that the problem can be traced back to your friend.
Those "things" aren't working because your friend shorted out
the power supply. The next place to look? Back to your friend
again, and this time we need to find out if he has any background
in electronics. I doubt it though, since anyone who did posess
the required background would never attempt to service a light
bulb with power applied. If the last assumption/train of
thought is applicable, I suggest that you convince your friend
to take it to someone who is experienced in these things and
have the supply repaired, as well as everything else he may
have destroyed in the process. An unthinking moment can be
extremely expensive. Every man should know his own limitations.

I might also suggest that he "experiment" on some less costly
pieces while he is in the process of becoming whoever it is
he's pretending to be. Someone who should be messing with
this stuff he definitely isn't.

73,
NAO911/Jack

Looking to purchase this radio... Is this thing any good?? looking for someone who owns one, that can tell be comparison-wise, if this one has a better channel-to-channel rejection than let's just say a Ranger 2950/ Galaxy 2527. From what I can tell, the 4900 has many neat features that aren't on most other radios in its price range.....How's the Audio output?? Any comments are welcome, please let me know...

Hey man I appreciate the link you posted here. I found that link via
a search however I do not see any reference to modulation and power
ADJUSTMENTS. I do see that the page contains information for
expanding the frequency range.
Anyway I am still looking for modulation and power adjustment
information for that radio. I will buy a service manual but in the
meantime....

Thanks!

I want to get the best transmit and receive range from a car.

Do modern CB have advanced digital squelch technology or noise reduction when listening to a nonsquelched channel?

And then there are antennas. I am limited to a window antenna.

I already set up a Radio Shack CB walkie-talkie and it was extremely useful, however my transmit range wasn't even 1/4 mile - probably like 1/8th or less.

Thanks in advance.

In Fact they have a retail outlet in Marshall Texas...And not even 1% of all CBers read the newsgroup...Word of mouth and fair dealings is how most CB retailers both big and small make it in todays world. I am not saying however that EEI is the "biggest" "bestested" "badest" place to buy...its just one of many...but I myself am very pleased with them and their service.

Peace to you Gary and 73's

Ron

Why a window mount?? These antennas are GARBAGE, bottom line. Remember this, a considerable percentage of your radio system is your antenna. (much more than half.) Bite the bullet, and go buy a Wilson 1000 magnetic mount. The bottom side of the magnet will not damage your paint (there is a plastic film on the bottom side of the magnet.) Then go buy a UNIDEN radio. These radios are BY FAR the best radios that you can buy for the money. The smallest DECENT radio they make is the PC68LT. It works very well, and if your SWR's are set correctly, you should get out 5 miles, without doing ANY modifications to the radio... These items together should cost no more than $150. Be Safe and have fun.....

Well, Ken, some time ago on rec.radio.cb, someone was encouraging the "gang" to use a particular group of HF frequencies for their free-banding. I thought the list of frequencies looked familiar, then it struck me that he had listed the trans-Pacific and trans-Atlantic HF air-to-ground channels that Aeronautical Radio, Inc., uses to track long-range commercial airline passenger flights. When I pointed that out to him, explaining that he could possibly be endangering lives by encouraging HF free-banders to utilize those frequencies, I was flamed to a crisp.

Break whatever laws you desire, but in doing so, don't infringe upon other people's welfare and well-being.

## 1333. 28.085Mhz: Truckers/Export Radios

Newsgroup: rec.radio.cb
Date: 2001-02-11 09:50:20 UTC
From: qrm2000@aol.com
Message-ID: <20010211045020.17762.00000514@ng-fk1.aol.com>
Source record: 73113

> Export radios have nothing to
>do with illegal operations on 10m.

Having been involved in numerous intruder situations, I disagree. There are several brands of export radios which do not have frequency readouts--either digital or analog. All the operator sees are switches marked BAND and CHANNEL. Unless one refers to a conversion chart, the operator has no idea what frequency the radio is on.

I have seen several cases where I believed the operator was sincere when he said he had no idea that BAND K was in the amateur allocations.

As a side note, trucker traffic on 28.085 has been dropping during the past several years, following letters to the presidents of major transportation companies, and articles in several "Trucker" magazines.

Over-the-road drivers are hardworking individuals, and many own their own rigs. Without them, American commerce would grind to a halt. CB radio is a great tool for checking road conditions, talking to the dispatcher in the yard, and requesting assitance. I'm pleased that many are responding to the recommendation that they abandon "company channels" in the 10-Meter ham band. Drivers have enough to worry about without adding legal problems!

I agree with CastleCra 100%,
Wilson makes a magnet mount
called the
"Little Wil" and i have heard nothing but good comments on this unit.
Magnet mounts are better than thru-glass units but they both use a
capacitive coupling.
Nothing beats a good thru-hole or bracket-mount antenna.
A properly installed and tuned antenna with a cheap radio will always
outperform a big-radio with a crappy antenna.
Reaching out and touching people is 90% antenna / 10% radio.
Use a quality SWR meter to tune the antenna after you choose the final
mounting location on your vehicle.
If you move it,re-tune it!
Coax plays a important role in transferring the signal from radio to
antenna,
and vice-versa.
The Uniden PC76 or Cobra25 have some great potential locked inside......
As CastleCra stated, the Uniden PC68 is no slouch either.

Source record: 73118

At the risk of someone pointing their flamethrower at me,
previous experience has shown me that classic bridge-bangers enjoy a
favorably long stick of coax (thank god for burn cream) ,
also the antenna is electrically too short because the SWR on 26.965 is
higher than the SWR on 27.405.
This is a common problem with 1/4wave non-loaded whips.
Tape a piece of coat-hanger to the side near the top and trim until SWR is
lowest on desired frequency.
Then use a couple cable-crimps to attach the added length of stainless.
Aluminum does not make a ground-plane,no matter how you slice it,period.....
Maybe i misinterpreted what you said,but it sounds like you sliced the
sheath
and pulled the ground braid out to attach the counterpoise.
Use a properly installed PL259 connector and connect the ground wire using a
large eye connector on the bottom side of mount.
These antennas use the bottom half of their length for transmit/receive
function, and they dont like any obstructions in this area.
The most successful installation i saw on a truck was mounted on a 24"
pedestal at the back corner of the bed side-rails.
The steel pedestal was bolted to the body and extended above the shell.
What a great sounding rig.....
He did not need to run a supplemental ground because the steel pedestal
grounded to body which is electrically connected to frame.....

Yo' QRM, iI hear what you are saying but disagree with your end result. You can't put the blame solely on export radios, after all, they are EXPORT. Damn country never wants to accept personal responsibility. It's not the radio, it's the people using them. It's not the guns, it's the people using them. It's not motorcycles, cars, jet-skis, guns, airplanes, drugs, or any damn other thing. An inanimate object can not take on good or bad characteristics, it is illogical to think otherwise. It is human error, ignorance, and stupidity that attach and stigmatize objects as "good" or "bad". Just one more way of our way of saying, "We will not tolerate accountability for our actions and can not be trusted to utilize "object" properly, therefore we must do away with it". It never ceases to amaze me that not only do some people NEED to be told what to do, they WANT to be told what to do and if faced with a decision that requires no outside thought or contribution, they are unsure, in many times incapable, of rendering a logical, independent decision.

Do yourself a favor and put that cbloser in your loser file then you wont
have to
read garbage like that.
Never work on equipment with power turned on,zzzztt,oops did i do that.
You undoubtably cooked some diodes and who knows what else.
Break out a multimeter and the service manual with schematic then start
tracing backwards from the short.
Good luck.

Suppose you are away from home and have been so for an extended time. Let's also suppose that the party you have a sked with is ill and you would like to discuss their well being. Do you think it is right for other's to expect you to yield the frequency so that they can change the subject and talk about whatever they please? Get real!

I do my share of entering conversations if the topic interests me, but I do it politely. I announce my presence and then leave it up to the parties in QSO to either invite me to join, or to acknowledge that I have the frequency when they are finished. Truthfully, I listen carefully to see if the parties in QSO would be likely to want company. If not, I leave them alone. This is called manners.

CB has turned into a free for all. Let's not do the same thing to amateur radio.

Cellsphones won't work if someone is in the outback away from civilization. We have plenty of amateurs in the world that rely upon amateur radio as their only contact with civilization. Are we so selfish that we cannot recognize their needs? That would be a typical CB attitude.

We have been warned by the FCC that unless we clean up our act, we may lose our frequencies. There must be something worth preserving in order to reserve our precious RF spectrum allocations. A CB band that incorporates all of the ham bands is not what they have in mind when the term "worth preserving" is used.

Hello Helmut: Yes I am busy making antennas. You should see the 20 meter version, looks Bitchen! And also works all the other higher bands with with a remote motorized tuning device.

"Super Penetrator 500 knock offs"
No the Super Penetrator 500 is Telex's version of the Hy-Gain Penetrator 500, that had a cheap golden finish to the aluminum tubing. Made from 1979 to around 1982. I am not doing that.

"slightly beefed up version"
No again, much more reinforced, and highly modified. The Mastodon 5000 works from 24.8 to 33MHz, adjust to where you want to work, 12 thru the VHF low band and higher. I have also have a 15 meter verisons out there.

But there is somthing newer, the Interceptor 10,000, has a little bit better bandwidth, takes more power, looks bitchen, and is cheaper to manufacture, more bitchen!

Thanks for asking.

Why Not? I believe the original poster is using an aluminum window frame
for a ground connection, not a ground plane.

John your aluminum window frame is not a good place to catch a ground
unless the frame is also grounded to the rest of the truck "chassis"... You
best bet would be to use either chicken "wire" you know the kind with the
small blocks, install this up in the fiberglass camper top. What you are
looking to do is create a ground plane since you are using fiberglass, the
mesh needs to be attached to the truck body to achieve a good ground with
the chassi... It is not very hard go to hardare store and get some mesh
install it on the inside of the camper top , you know have a great ground
plane, you can now mount antennas on the top of the camper top which would
yield the best performance ...as well as getting a better swr.

Greetings!

I owned a Handheld from Radio Shack that allowed 1 watt, 2.5 watt or 4 watt power output. And was type accepted by the FCC.

The feature was used to conserve batteries and prevent overload at close range comms.

There is not a law that states you can't have a radio with a variable power. As long as the maximum 4 watts carrier, or 12 watts SSB is not exceeded.

Perhaps he's confused with frequency shift?

On Sun, 11 Feb 2001 00:12:23 GMT, while the modem was ice fishing with the Mouse, "Train" <cbmods@optonline.net> dissertated the following:

:+> Would only be a violation if the variable was capable of EXCEEDING 4 watts
:+> drive.

Yep, finally. A satisfied customer. I just have to wonder though. Look out now,
I have an attack of logic coming here.They do their business exclusively on the
internet, right? (they don't have a street address you can drive to; no retail
space at all apparently) So if someone is interested in CB radio, they might
find their web page and several others and buy something, but they might not
stop there, but go on to news groups like this one, right? Certainly not all,
but a healthy sampling anyway, right? So, if that was the case and they were
selling millions of dollars worth of merchandise out of their warehouse then
there would be thousands of customers, most of whom would be satisfied with
their service and anxious to learn more about their hobby by reading and posting
here. If the company sold a million in retail, and each customer bought $500 in
retail on average, that would generate 2 000 customers, and if 5% of those
customers gravitated to this news group, that would put 100 people here reading
and defending EEI for their gracious support and good dealings. Since their
business dealings have hit the fan, we have seen one legitimate customer come
forward to say that they bought something, were treated properly, and generally
got a good deal. Goodness, even Stephen Fowler had a better track record than
that. And if no more than a handful of customers have gravitated to this
newsgroup, why is it that the CEO has the time to respond to every post, and
often in such tactless ways? In other words, if his customer base is not here
and has never been here after millions in retail sales, why does he get excited
about the goings on here and how we feel about his business practices? I submit
that the NG readers are intelligent enough to draw reasonable

conclusions.

# 1361. A new twist? JOIN THE ARRL!

Newsgroup: rec.radio.cb
Date: 2001-02-11 17:15:47 UTC
From: radiohead11m@aol.com
Message-ID: <20010211121547.16951.00000564@ng-mj1.aol.com>
Source record: 73141

Hello fellow 11 meter enthusiasts,

I have a new idea. So much has been made of the fact that we(11m ops) have no real representation in DC while the amateur community has the ARRL. The USCBOA was a nice idea but seems to lavk the organizational skills to get airborne. I got this idea while reading a ham forum thread where many amateurs were complaining about the ARRL allowing "chicken banders" to infiltrate the ham bands and vowing to cancel their membership. Well here it goes.

JOIN THE ARRL! That's right, make them live up to their name. The AMERICAN(NOT Amateur) Radio Relay League. In the mid 60's, the number of CBer's outgrew the number of licensed amateurs. The price is $39.00/yr. and you need NOT be a licensed amateur to become a FULL member. I know that's steep, but I've spent more on a power mic and this money REALLY makes my voice louder. I'm sure there would be a bit of resistance in the beginning but the ARRL is made up of hams who are...politicians. That's right folks, let the first official lose their post at the hands of an 11 meter "swing vote," and see how our "concerns" take on a little more importance. Here's a bonus, when you here an old stodger cry "I'm cancelling my membership," rejoice...that's called a two-for-one sale. Your vote no longer opposes their's, it REPLACES it.

The kicker is that if you plan to be as vocal as I am, you need to run legal. I'm NOT preaching. I freebanded for over 10 years and LOVED it. However I send letters to my representatives and the FCC, so my house must be in order. Riley Hollingsworth himself can come to my QTH for a suprise visit. I sent a letter to my reps re. RM-9807 and asked why the FCC admitted that the MAJORITY of CBer's were in favor of dropping the 155 mi. limit rule, yet the ruling was swayed by "private interests," namely the ARRL and NAB. Not only did I receive a reply, but it included a reply from the FCC to an inquiry by my rep. Did it really make a difference, perhaps not...but I know at least three more souls know about a "voter's" displeasure.(An election year to boot!)

I sent a letter to Radio Shack(Tandy) in Fort Worth, TX re. their HTX-10 and it's inability to be modified at their request. I explained that there are some who may want the capability to "monitor" ( ;-P) the 11 meter band as well. I returned mine and told them that I would gladly pay the extra $50.00 to RF, Ltd. for their Magnum 257(the modifyable version of the same rig) and will now purchase all my ham study material and 2m h/t elsewhere due to their policy. Again, did it make a difference...perhaps not, but at least they know that they lost approx. $450.00 in sales plus restocking costs.

Remember, to be this vocal, you need to fly right. I mis freebanding but it gave me many many hours of pleasure over the last ten years and this is the best way I can give back to 11 meters. If you don't plan to quit freebanding, don't be too vocal and run a "common sense" set-up. Your ARRL vote still counts! I never ran amplifiers and worked the world with an Clear Channel

Ranger AR-3500(30 watt model) and a two element yagi. I also encouraged five of my friend to do the same. It kills me when I hear hams flame us and there's little we can do because we don't want to attract the unwanted attention. Well, sometimes you have to defend yourself with the weapons the opposition gives you. The ARRL rates recently went up, you should hear the hams crying and threatening to cancel...go for it I say.

73 de Mark

P.S. Please excuse the typos.

Are you saying he doesn't sell illegal amplifiers?
If so perhaps you can defend him, I know you are not that naive

Many good wishes =73's..Ok if you wanna get picky I will simply use...Peace
to ya and 73....if ya happen to be on the HF bands and talk to me you will get
73's however....over 30 yrs of saying it and I am to old to quit now :)

And YES I am legal on those bands

Many in this group would be well served from reading the writings of Andy.
On another note, Bill Eitner has done some good writing on his site also.
They are both well spoken individuals who have taken the time to help others
on this group and elsewhere to further their knowledge of radio theory and
are due at least this small pat on the back for their efforts.

# 1384. Re: EEI Self Praise

Newsgroup: rec.radio.cb
Date: 2001-02-11 19:22:18 UTC
From: Jay in the Mojave <jay123a@qnet.com>
Message-ID: <3A86E66A.DBCE41E5@qnet.com>
Source record: 73050

Hello Helmut: Yes I did get a little air time there didn't I. I did take advantage of that. You would have thought that I posted your posting.

The Maston 5000 you saw was a Prototype (none production of course) for testing, there are about 12 of them out there mostly being tested. Had a guy over in the foothills of the San Garibal Mountains have his garage door blown in durning a wind storm, but the Mastodon 5000 held in there not receiving any damage, the base of the antenna was at 30 feet in the air.

Yes There a few out there on 20, 15, 12 and 10 meters. Got a guy who whats one for a 29 MHz FM 10 meter mountain top repeater. We'll see what the mountain rain, ice and tempatures do to it.

No web site as yet, I want to get a few more things built and tested. It takes about 1 to 2 weeks to build a new Prototype antenna, and about 5 to 6 weeks to do the field strength tests, if your lucky and don't get rained or wind blown out. I just don't take one set of comparison field strength tests from one location, compared to two antennas. Many antennas are used and many locations are used and a average is used for my dB ratings in field strength tests. It gets pretty busy, and you half to take good data or your forced to repeate it all over again.

There are a few people who have asked about being a distributor, but the product must get going first, and a high volume of antennas must be in demand first. I have had offers for a distrubutors, that included upfront money and a advertising program. Time will tell.

I also have a VHF & UHF scanner and 12, 11, & 10 meter beam antenna on the drawing boards. But the Mastodon 5K and the Interceptor 10K will half to get going first.

The copper or steel wire that was making the connection to the aluminum frame was the acting counterpoise (electrical ground and ground-plane or counterpoise are 2 different entitys).
Steel or Copper are the only 2 elements that i know of that will act as a reflective
element for a RF signal.
The wire acted much in the same way that tuned coax does on a NGP antenna.
The outer sheath of the coax acts as the supplemental ground-plane in addition to transferring the RF signal between radio and antenna and vice-versa.
Your Welcome.....

Hey Mark,

You hit it the nail right on the head. As I recall, I sure did join the ARRL BEFORE I had my ticket. You're very right about the politicians in the ARRL, they're just like any other politicians...they want to keep their posts. I too run a "clean house" but I certainly wear no halo for my 11 meter past. It is a good way to "give back" to 11 meters, both CB & "freeband."

I surf the ham forums too and also read the flames that erupt at the very mention of 11 meters. Good call. Thanks.

I SAID HE WAS CAUGHT SELLING amps, hence that is the reason he received the fine when he pays his fine he may be prosecuted. When he pays the fine it is an admission of guilt, and yes he is then subject to whatever other penalty they want to hand out. What do you call it ?

Prosecute ::
To bring judicial proceedings against a person and to administer them until the conclusion of the court proceedings. Lawyers are hired by the government to administer the prosecution of criminal charges in the courts.

Before You Blow the Whistle.
Is the wrongdoing at issue substantial enough to warrant the risks of reprisal and the investment of human and financial resources to expose it?
Are your allegations reasonable and can they be proven?
Can you make a difference in resolving the wrongdoing if you blow the whistle, or will you be beating your head against the bureaucratic wall?
Determining how to act on these conflicting values is not easy, and it is a choice that only you can make. Equally important, your decision about whether to blow the whistle should be fully informed by an understanding of the potential risks and rewards of your actions.

Doggie:
The MAIN question is "WHICH Country are they made in?"
IF China, it is JUNK. I wish dey was still made in Japan by Cybernet,
but that is wishful thinking. They have to come up with something to
go against Cobra's "SCAM Tracking" and Unidens Dynamic Squelch
control. They ARE MID-LAND and should be made in Missouri, but being
in a Deut. 28 Country they have to be made in Chaboybabalonland!!!!

Cool Beans!,

That's a beautiful idea. Imagine groups like the Alfa Tango's, Kilo Papa's, Sugar Delta's, as well as others getting their rosters to join. Add that to the independent operators and you may well be actually talking about some respectable numbers. That IS a good call.

And to Aaron,

It's fine that you oppose this...this is the American way. Democracy at it's finest...use the power of the polls and also the mighty dollar. Good for Radio Shack, shame on them. Get your Tech(with code) ticket and want to hop on the fmr. Novice 10 meter sub-band...buy an RCI-2950, Magnum 257, or any of the other "export" rigs available. You'll be supporting the freeband industry legally. Aaron, this requires the loudest supporters to operate legally, I thought that was your quest? Don't like it when someone finally comes up with a wat to use the system against itself? This'll be the best forty bucks I've spent in a while. Heck, I've spent more than that on a nice dinner.

From the responses I've seen so far, I count a four to one ratio(not counting you-know-who) and that's not bad at all. I've been on QRZ.com & eHam.net and read the 11 meter "hate-fests" as one guy put it. You got my vote Mark! 73.

Charles

I am not currently a League member but have been on and off for many of
the 46 years I have had the ham ticket. All told I am pretty mild on the
subject one way or the other. Go ahead if the spirit moves you and you
can justify reading Q-Street. There are a few questions and comments:

1. Are you sure that voting membership does not require a ham ticket? Not that they are all that hard to get.

2. Have you fallen into the idea that the ARRL is a lobbying organization? They have done little to quiet the notion that the FCC leans on their every word but the reality is both that they don't and the ARRL cannot lobby and retain their valued postal permit. This pomposity has successfully pissed off both sides in every debate since about 1951.

3. Might you not be crediting the ARRL with more influence on the 155 mile thing than in fact they have had? You couldn't get Cousin Charlie to even say CB let alone change the rules. MURS was a convenience to the FCC not a concession.

4. You are probably right that influence could be gained by subscriptions alone (and the ad revenues that go therewith). One is reminded of the old Daily Worker (the organ of Communist Party USA) when it was pointed out that two-thirds of their subscription base was the FBI; when Sam quit supporting it it collapsed like a cheap tent in a stiff wind.

5. In the long run of things, no one really cares a whole lot about either the Amateur Service or CB. Are you sure that what you might be accomplishing is not combining two non-entities into one?

Mark,

I am going to play devil's advocate here just for the sake of doing so. It is NOT meant as a flame, OK?

Let's start with the 155 mile limit. The entire argument seems to center around several points AND the understanding, or lack thereof, of the purposes of, and differences in, CB and Amateur Radio. Because CB was never intended to BE a hobby, these restrictions were put in place (distance and power) to minimize interference. Whether they were/are successful is another subject entirely. CB was meant to be a LOCAL mean of communications between family and, in the beginning, businesses that needed a cheap means of radio. Amateur Radio being, as it is/was, experimental, led the way towards long range communications, and along with early commercial development, led the way for civilian, commercial, and military HF communications as well. General Curtis LeMay, of WWII 8th Air Force fame was also a ham and, after the war, using his background as a ham, spent much effort in making military communications much better than it was during that conflict and before. Thus, because Amateur Radio WAS, indeed, a factor in much development of RF technology, AND was recognized as a great resource in such advances, it still enjoys something of a "preferred" status in promoting good will among nations and in times of local and national emergencies. One of the organizations that has promoted the interests of Amateur Radio is, of course, the Amateur Radio Relay League.

CB radio and Amateur Radio both have their places in American communications, but their purposes are quite different. Hoping not to insult anyone, but the recurring theme I seem to glean from many of the pro-CB voices is that everyone should be able to just get on the radio on any frequency without ANY technical requirements whatsoever, no training whatsoever, no discipline whatsoever, using whatever amount of power or whatever kind of radio available. In other words, "we want ALL the privileges that Amateur Radio has without having to work for it at all". The truth is, that wouldn't work. What you would have is a situation that existed in the early part of the 20th century before there was any regulatory agency or regulation at all. Without that regulation, the communications and entertainment media that we take for granted would have been impossible. There had to be separation of services, guidelines for kinds of radio/TV programs, i.e., who could do what where. What the "opposition" would do is to tear down the careful work done from lessons learned in the past and return us to chaos where airliners can't find airports because there is a "freebander" calling CQ on 6.604 or 6.628 MHZ, where fire trucks couldn't arrive at fires quickly because they had to "ask" for a "break", or police couldn't investigate a wreck

without having to ask for a break on 455.350 MHZ.

Now let me ask this: What legitimate purpose would be served by joining ARRL--an organization that is dedicated to serving a radio service that has nothing really to do with CB radio? If any of the above reasons are the reasons for "infiltrating" ARRL, then it would only be the death of ARRL because the advocacy of "changes" in such things as the 155 mile limit would only de-certify ARRL's ability/credibility in influencing changes that are detrimental to ALL radio as a whole. The lessons that needed to be learned about how to administer a resource such as radio spectrum have already been learned, and if you think those lessons have been forgotten by our government and knowledgable radio people, you are mistaken. Attempting to make CB radio a "part" of Amateur Radio will fail before it even gets started, and again, would only relegate ARRL to the annals of history. If you want to have a Relay League for CBers, then do so. Organize something that is for CB, by CB, of CB.

Finally, the solution has always been available. True, it is not popular with *some* CBers. Instead of attacking ham radio, instead of trying to dilute it, or infiltrate it and its representative organzations in a failure-sure attempt to ride ham radio's coat tails, BECOME a ham. The legal methods of talking over 155 miles, "shooting" skip, running amps, and having an almost infinite number of frequencies in MANY bands are THERE and have been for nearly 100 years! And you don't HAVE to join ANY organization to do it--not ARRL or ANY group! All I am saying is that there is a RIGHT way to gain the things you want and a WRONG way. IMHO, what you *seem* to want would only lessen the viability of radio available to the citizen, not enhance it. Yes, there are requirements to have the privileges you seek, but anything worth having is worth working for. Yes, there is a requirement to know Morse code at 5wpm. That is, at present, an international requirement to which the US is signatory by treaty for access to HF. Even that is not hard at all. So instead of trying to get ARRL to "promote" an "agenda", become a ham, join it, and influence policy that is favorable to amateur radio which you can enjoy with a few hours of study. Just yesterday, I had a short contact with Alexi, RU4EG, in Moscow, Russia. I didn't have to worry about my "legal" radio, about being heard "freebanding", or about FCC because that contact was done with a stock 100 watt mobile and because I have the required license. Why a "license"? Simply put, it is a document that shows that I have demonstrated a certain amount of knowlege of radio. It is a measure, albeit, perhaps, imperfect, of my own technical know-how. It doesn't make me "better", doesn't make me "smarter". I took the tests and passed. Period. So, come ON--join us. It's FUN!

Jerry

It might be bullshit but if I remember correctly, (and I usually do) we have
a member of this NG that has done some SERIOUS testing on antennas. You
might want to check with him (Brass) and see what his findings revealed on
gain for different models.

The FCC does nothing but consume good air and expel bad air. There is
something wrong when your only appeal on a "ruling" is to appeal to the same
bunch of assholes because they are the only people who deal with it. there
is no court involved in their "rulings" as you put it.
You need to learn a little about the NAL system prior to spouting off....I
have my first NAL framed on the wall!

That radio has been out for 3 years now. Had one wasn't to bad no RF gain control. There are mods out there to allow 10 meter operation which is a faceplate board mod. Radio could be peaked up to about 28 watts 7 watt key.

Yep I knew this as well :) Sometimes we have to make a little noise to see what we catch :) And the name is Ron....but Ray works...been called alot worse than that by the wife...

73 AND 55

Peace

Ron

The PROBLEM is that places that sell the radios DO NOT tell the
customers "DO NOT TALK" when the counter says 28.anything ! Or they
don't give them a freq. list and tell them to NOT TALK there, because
it is Hambo land! My question IS: are they really interfering with
the geeky morse code operators, OR is it just a BIG bandwagon for Boobs
& Nerds to jump on to? Granted, if it makes QRM, they should be not
there. But if the freq. IS clear (with NO skip in), then it don't
interfere with anyone! Dave!!!!!!!!!!

Then I guess that all those beam antennas with director and reflector elements made of aluminum just don't work. Your answer is pure rubbish.

You HAMBOS are something else! First of all, does this NICE
Black man (Lowridah) say that it has CB in it? NO ! Second of all,
HOW can you determine that he is a SODOMITE ? Sounds like you accusing
HAMBOS are a BIT racist to me, you DUMB HONKEYS !!! And is he a "Key
Clown?" Sounds like a HAMBO name! I have been on the CB since '72,
and don't even remember a "Handle" like Key Clown ! Sounds like you
Honky racist KeyClown SODOMITE Hambos ARE the problem! LOOK FOR THE
Commy NAACP & the ACLU to bust yo door down soon !!!!!!!
Dave!!!!!!!!!!

Brass isnt the only one to do any testing OF ANTENNAS on the NG. Ill say it
again show me where any manufacturer says there antenna works differently
with different power levels applied to them...

I saw an Aluminum UHF TV antenna mounted vertically the other day on a Semi. Does anyone know which dist. has them, or who I can get them from? I sold him my 5' antenna for VHF, and he had another coax for the house looking UHF TV antenna. He said it works good. E mail me direct @ truth@planetc.com Thanks! Dave

Train, do you think you are the only one to recieve a NAL, I wouldn't have one framed its not something to be proud of perhaps it is an accomplishment in your eyes. The Fact remains they won't send you the NAL unless they are very very certain you are guilty of breaking their rules. Again I ask you did Steve sell illegal amplifiers .. Your damn straight he did and still does. Were you guilty of breaking a FCC rule when you got your NAL. Your damn right you were. Here is a little food for thought, read what I posted below and then you tell me I am wrong

Monetary Forfeiture

The Commission may assess a monetary forfeiture for violations of its rules. Generally, the Commission first issues a Notice of Apparent Liability ("NAL") to the subject. The NAL lays out the relevant facts and informs the subject that: (1) the Commission believes that it has violated a specific provision of the Communications Act and/or the FCC's rules; and (2) the FCC believes that a certain dollar value fine is appropriate. Forfeiture amounts are based on the Commission's Forfeiture Guidelines. See Forfeiture Guidelines Report and Order and Forfeiture Guidelines Reconsideration Order.

The party receiving the NAL may either pay the forfeiture or file a response explaining why the NAL should either be reduced or cancelled. The Commission will review the response. If the Commission finds, based on the information contained in the response, that the forfeiture is not warranted, it will issue an Order canceling the NAL.

If, however, the Commission determines that the forfeiture remains warranted, it will issue a Forfeiture Order. In issuing the Forfeiture Order, the Commission can assess the forfeiture in either the same or a lesser amount than that proposed in the NAL.

The recipient must pay the forfeiture within 30 days from release of the Forfeiture Order. Forfeiture payments must be sent to: Federal Communications Commission, P.O. Box 73482, Chicago, IL 60673-7482.

If the recipient does not pay the forfeiture within 30 days from the date the Forfeiture Order was issued, the Commission may refer the matter to the U.S. Department of Justice for collection action in federal district court in a trial de novo proceeding. The Commission may also issue a forfeiture after a hearing before an administrative law judge.

Referral for Criminal Prosecution
Seizure of Equipment

The Commission has the authority, in coordination with the U.S. Department of Justice, to seize equipment that is manufactured, sold, rented, or used for the purpose of violating the unauthorized operation and manufacturing

and sale prohibitions in the Communications Act. See 47 U.S.C. Sections 301 and 302. In such cases, the U.S. Department of Justice must commence a proceeding in federal district court to obtain a warrant for seizure. This enforcement tool is often used by the Commission in cases involving unlicensed operation of broadcast stations.

In addition to other available penalties, any knowing violation of the Communications Act can result in a criminal fine of up to $10,000 and/or imprisonment of one year. In addition, the Communication Act authorizes criminal penalties for specific violations. For example, the Communications Act imposes a criminal penalty of up to $10,000 and one year of imprisonment for a party who is convicted of violating the sponsorship identification requirements of the Communications Act. The Commission itself does not have the authority to conduct criminal prosecutions or impose prison sentences for those convicted of violating the Communications Act. In appropriate cases, the Commission will refer the matter to the U.S. Department of Justice.

Here you go mixing apples with oranges,confusing the theory of operation for
a yagi or similar directional antenna which also needs a counterpoise to
work correctly.
I refuse to have a pissing contest with you,do your homework.
The End......

WADR, aluminum conducts RF almost as well as copper, whether it is
used as a radiator or counterpoise. It starts being less effective at
UHF and above because aluminum has a layer of oxide that interferes as
the skin effect becomes more and more shallow. Also, yagi antennas do
not need a counterpoise because their radiating element is a dipole.

Thanx Sparky,
I knew that i was slightly over my head,
but on the same note i knew that aluminum does not make a effective
ground plane or counterpoise which started out as the basis of the
disagreement.
Thanx again for clarifying.....

Source record: 73057

Hi Jerry,

Thank you for playing "Devil's Advocate." I certainly don't take it as a flame, quite the contrary. It helps the promote better understanding for all.

Re. the 155 mi. limit, I agree that CB as "designed" was never meant to be a hobby. However, this is what it has evolved into. It was allocated smack dab in a portion of the RF spectrum that supports worldwide propagation...by a organization that certainly has no excuses for not knowing better. All things in life evolve, if we were to believe that things would always stay the same, then there would be no need to build four lane highways in place of dirt roads. I personally know 11 meter ops whose technical skills surpass many a licensed amateur. Like you said, doesn't make them better or smarter...however it does(or, at least, should) command a little respect. I myself am an antenna tinkerer...I like the challenge of talking worldwide with 12 watts, and there are many out there just like me.

I do like the idea of taking the exam(s) and eventually becoming at least a General. A close friend of mine just took the Tech exam and was astonished at how easy it was. However, it's got more to do with than just saying "become licensed." I've been involved in 11m for quite some time now and I've seen some appalling general comments re. same. I don't think 11 m ops want ALL the privileges of ham radio without having to work for them, but I think it's time for a more civil approach at getting "some" privileges that are quite frankly naturally occuring.(Can't legislate propagation.) The analogy of a freebander on 6.604 0r 6.628MHz has truly nothing to do woth the issue of 11m. Please let me re-iterate, I'm truly not new to the 11m band and I'm well aware of most of the comms occuring there. I think this is a rather refreshing method of resolving our difficulties rather than just "keying up" and ignoring authority. Become a part of it.

I certainly DON'T like some of the attrocious manners that I've experienced on the 11m band but I think that by cooperating with the more responsible ops, the more egregious offenders might better be curtailed. The responsible fellow running 35 clean watts and emitting little or no spurious emissions is far more common than the fellow with the 1.6Kw amps driven by a "peaked & clipped" RF dirty radio. By becoming part of the system, one might control one's destiny a bit better than simply defying authority.

You mentioned that the ARRL has nothing really to do with CB radio. I agree...right up to the point where the ARRL stuck it collective nose right where it had nothing really to do with...RM-9807. CBer's, championed by Mr. Dixon(a licensed amateur I might add) weren't asking for ALL the privileges of ham radio.(stop and think about how all encompassing that would be) They simply wanted to de-criminalize(so-to-speak) an activity they had been engaged in for decades and do away with an un-enforceable rule. The "legitamate" purpose of

joining the ARRL...is representation, plain and simple. As far as the death of the ARRL, I don't think so...we really aren't a disease...just a consituency. We've been degraded and maligned for years...some of it most certainly our own faults. Perhaps now is the time for a different approach.

My friend that took his Tech exam last week, one of the ID's he presented(beside his drivers license) was his ARRL membership card. To say that we'll somehow tarnish the ARRL is, in itself, a bit degrading. Once again, we are not a disease and I certainly agree with becoming a ham...but there's nothing wrong with acknowledging one's self as an 11 meter enthusiast as well. What the FCC did when they acknowledged that the majority of constituents DIRECTLY affected by RM-9807 were in favor of the proposal, however the input of an organization that had "really nothing to do with CB" is an affront to a very basic democratic principle and something that should offend "citizens.". Organize something that is for CB, by CB, of CB?...no, I think the ARRL just declared it's candidacy.

I, for one, will merely e-mail candidates in local ARRL elections and ask them for their positions re. 11m. I'll explain my concerns and inform them that they now have one more aspect of the RF spectrum to consider for my vote. That's not bad. Keying up in the 10m band w/o a license is bad, throwing a 100 watt harmonic from your 5Kw linear is bad...this is a viable alternative.

Thanks for the invitation. Yes, I'll be happy to join you as a licensed amateur...however licensed amateur and 11m op need not be mutually exclusive. I can wear two(or more) hats and still enjoy both.

Thanks for hearing me out and playing the DA, feel fre to e-mail me, I certainly like your style.

73 de Mark

Once again, I'm on a pal's PC, excuse the typos...my mind's moving faster than my fingers.:-)

Hello Dick,

Thanks for responding, I've read your responses to other posts for quite some time an truly respect your opinions and ideas. I'll attempt to satisfactorally reply to your questions/comments.

>1. Are you sure that voting membership does not require a ham ticket? Not
>that they are all that hard to get.
No it positively does not. My good pal sat for his Tech last week and one of the required two forms of ID he presented was his ARRL membership card.(Full Member)

>2. Have you fallen into the idea that the ARRL is a lobbying organization?
>They have done little to quiet the notion that the FCC leans on their
>every word but the reality is both that they don't and the ARRL cannot
>lobby and retain their valued postal permit. This pomposity has
>successfully pissed off both sides in every debate since about 1951.
I agree, however the ARRL did feel that it had enough of a "lobbying" influence on the FCC to vocally oppose RM-9807. I say they announced their candidacy themselves to represent 11m. Feel free to have a negative effect, well we'll legally put you to task.

>3. Might you not be crediting the ARRL with more influence on the 155 mile
>thing than in fact they have had? You couldn't get Cousin Charlie to even
>say CB let alone change the rules. MURS was a convenience to the FCC not
>a concession.
No, the ARRL and NAB both had an obvioud effect on the outcome of RM-9807. So much so that the ARRL arguement against was para-phrased in the official FCC statement of denial. Doesn't get much clearer than that.

>4. You are probably right that influence could be gained by subscriptions
>alone (and the ad revenues that go therewith). One is reminded of the old
>Daily Worker (the organ of Communist Party USA) when it was pointed out
>that two-thirds of their subscription base was the FBI; when Sam quit
>supporting it it collapsed like a cheap tent in a stiff wind.
We'll keep our fingers crossed. I certainly don't want the ARRL to collapse, but I think this is a far wiser step than simply challenging authority and transmitting out of band or with excessive power.

>5. In the long run of things, no one really cares a whole lot about either
>the Amateur Service or CB. Are you sure that what you might be
>accomplishing is not combining two non-entities into one?
Good point re. the combining...but perhaps that's what's needed. As far as nobody caring, I don't believe that for a second. I care deeply for BOTH services and the fact that we're having this discussion shows that you do too.

Thanks for replying, I hope you can see some of my points of view. I certainly respect yours.

73 de Mark

Pardon ant typos, I'm on a buddy's PC and typing fast.:-)

: The copper or steel wire that was making the connection to the aluminum
: frame was the acting counterpoise (electrical ground and ground-plane or
: counterpoise are 2 different entitys).

Actually, the outside of the shield was probably acting as part of the
antenna. In other words, there is RF on the outside of the shield, which
is generally not desired.

: Steel or Copper are the only 2 elements that i know of that will act as a
: reflective
: element for a RF signal.

Any conductor will work. For examples, most beam antennas are made out of
aluminum, and the aluminum works fine for reflecting or directing the RF.

: The wire acted much in the same way that tuned coax does on a NGP antenna.
: The outer sheath of the coax acts as the supplemental ground-plane in
: addition to transferring the RF signal between radio and antenna and
: vice-versa.
: Your Welcome.....

See above. You do NOT want RF on the shield. Not only does it mess up
the radiation pattern, but it means that you may have RF problems inside
the vehicle (such as mike bite, feedback squeal etc).

Hello Mad Dog: Couldn't help but notice your post here, about aluminum
not reflecting RF Energy.

If this was true, then how do airplane antennas mounted on aluminum
airplanes work?

How does a ground radar see aluminum airplanes?

Whey do all the antenna manufactures use aluminum ground plane radials,
on ground plane antennas?

Or was this a poorly worded sentence?

Jay in the Mojave

Re: I heard a CB'er on 20 meters

Group: rec.radio.cb Date: Sun, Feb 11, 2001, 2:26pm (EST+5) From: 3dflyer@my-deja.com:

Suppose you are away from home and have been so for an extended time. Let's also suppose that the party you have a sked with is ill and you would like to discuss their well being. Do you think it is right for other's to expect you to yield the frequency so that they can change the subject and talk about whatever they please? Get real!
I do my share of entering conversations if the topic interests me, but I do it politely. I announce my presence and then leave it up to the parties in QSO to either invite me to join, or to acknowledge that I have the frequency when they are finished. Truthfully, I listen carefully to see if the parties in QSO would be likely to want company. If not, I leave them alone. This is called manners.
CB has turned into a free for all. Let's not do the same thing to amateur radio.
Cellsphones won't work if someone is in the outback away from civilization. We have plenty of amateurs in the world that rely upon amateur radio as their only contact with civilization. Are we so selfish that we cannot recognize their needs? That would be a typical CB attitude.
We have been warned by the FCC that unless we clean up our act, we may lose our frequencies. There must be something worth preserving in order to reserve our precious RF spectrum allocations. A CB band that incorporates all of the ham bands is not what they have in mind when the term "worth preserving" is used.
Ed Cregger, NM2K
ecregger@my-deja.com

Hi there, Ed. Suppose? Suppose is like "if". Hypothetical. Nowhere did I say that one should yield the frequency, reread what I was saying. I used the conversation concerning health problems as an example, you took it literal AND to heart. No problem with what you posted, you just reinforced my position. Note your words, " ..but I do it politely'. Politely. As opposed to what? I find it a novelty you feel the need to mention that you do it politely. What could you possibly infer, that others would not do it as politely as you? You also stated, " I listen carefully to see if the parties in qso would be likely (sic) want company...this is called manners". No. This is called mindreading, short of them coming out and stating so. I also stated I've heard the RUDE ops on cb AND ham, where did you draw inference from anything I posted that I wanted to make ham become like cb? I can care less about what happens to the ham bands. The last paragraph you wrote about cellphones is not

pertinent to cb. The statement you made about "typical cber mentality" fosters separation between cbers and hammies and does nothing to improve relations, if this is your goal, why are you here? Make no doubt about it. You are losing frequencies.

>interfere with anyone!

1. They are listening in the AM mode and would not detect CW. Therefore, they would not know if they were transmitting on top of a CW conversation.

2. AM is wide, and interferes with other channels.

3. They are not licensed for operation on this frequency, so they should not be there.

END OF STORY.

>Yo' QRM, iI hear what you are saying but disagree with your end result.
>You can't put the blame solely on export radios,

Agreed, Twisted. The radios are the vehicle. The real problem comes from those who sell them without explaining to the user what the bands are and where (and where not) to use it.

And of course, some folks are going to take the attitude that they paid for the radio so they will talk anywhere they #^$* want to.

Either way, it's not a good situation.

QRM

What a great idea. Funny thing is it was right under our noses all the time. I don't think it will harm the ARRL at all, but it will shake up the anti-11 meter contingent within the ARRL.(which is likely a LARGE %) I too am tired of them sticking their beaks in the wrong fountain. I did read the FCC's statement when it denied RM-9807 and compared it to the ARRL's letter to the FCC...almost word for word. There's no reason I can't be a licensed ham and a 11 meter operator and have my dues represent both interests!

To be honest, I too prefer this method of resolution rather than jeopardizing my wallet by "freebanding" as a means of protest. I say BRAVO for suggesting an alternative & LEGAL means for 11 meter voices to be heard. Forty bucks isn't going to break the bank and will go a long way in making a statement for us all. GO FOR IT!!!...DEFINITELY!!!

73 de Alan

ps - the animosity between the two groups didn't happen overnight and the ARRL had plenty of time to reach out to their "bastard step-children." We're comin' home!

Wonderful response!

This should show that meaningful discourse CAN be had and we can dis-
agree without being disagreeable. Your concerns are well defended
and well spoken. Quite a few of your points I can understand, and some
I certainly agree with.

One last thing about the 11 meter allocation and its inherent character-
istics. In 1958 when a generally available, economical Citizens Band
was being considered, one of the reasons it was placed there is that
VHF and UHF technology was much less reliable and much more expensive
than equipment for HF. FCC was not ignorant of the propagation issues
of 11 meters. Faced with placing it in the UHF spectrum and having it
not fulfilling the purpose intended, or allocating it to 27 megs where
people could better afford the state of the art as it existed, they
chose the "lesser, of the two--"evils", a word that doesn't exactly des-
cribe what I am trying to say since neither of those options are "evil".
I think this had more to do with their choice than several other factors
then existing. I think, too, that they could not have forseen what CB's
future would hold *BECAUSE* of the long range capabilities which did
not take too long to "tempt" folks to attempt to work those far away
stations. Yes, it's only natural for people to talk to what they can
hear. One last factor was that people were much less likely to defy
the law than now, or push the "limits" of what they could get away with.
No doubt, FCC was astounded and overwhelmed at the CB boom when it burst
forth in full bloom in the '70s.

If conditions are good for skip and IF the channel is quiet, I would say halfway around the globe. I talked to a fellow in New York, on 10 meters running 15 watts from Guam Island. Look about 14 degrees North of the equator and South of Japan, in the Mariannas Islands. We were both running SSB, although he was running around 100 watts (I was running 15 watts into a TH6-DX beam up 102 feet). We also had a fellow on Guam who ran PHONE PATCHES in the '60s running around 10 - 15 watts on a transistor transmitter (transistors were LOW power back then!). Of course, he was 'borrowing' the military rhombic antennas which helped - a LOT. The key is a quiet channel and good conditions.

Well at least somebody is thinking in the 11m camp. It's far better to work from within the system for change than from without. Also the points about operators cleaning up their act will get more favorable notice from ALL sides, than continuing the various operating practices, some of which are illegal with NO excuse.

The prospects for the above happening are not good however. There are a group of very vocal 11m operators who would like to see your idea fail. It seems those people are only interested in what they can suck out of 11m today, money - operations - etc., and screw tomorrow. They are not forward thinkers planing for the future.

> Or they
> don't give them a freq. list and tell them to NOT TALK there, because
> it is Hambo land!

The simple answer is the "export" type of radio does not meet Part 95 rules. If it did then there would be no way the radio could end up on the 10m band to begin with, and thus no problem. Part 95 has explicit rules how the frequency of transmission is to be adjusted by the end user, and using a VFO type system is not allowed, period. Radios that do not meet Part 95 rules are not allowed to operate on the USA 11m CB band. That's the plain and simple facts.

> My question IS: are they really interfering with
> the geeky morse code operators,

Just because YOU can't hear another station does NOT imply that another station can't hear you. You can be causing QRM to other stations and not even know it.

> OR is it just a BIG bandwagon for Boobs
> & Nerds to jump on to?

This sounds like the old "victimless crime" argument I see in various forms on this news group over, and over again. The freeband CBers still don't get the point.

> Granted, if it makes QRM, they should be not
> there. But if the freq. IS clear (with NO skip in), then it don't
> interfere with anyone!

The simple truth is if you don't have an Amateur Radio license YOU don't belong on any ANY Ham Radio frequency band.

> Are the Unidens and the Cobra 25 SSB? And is that necessary for range?

These are not side banders. You will need either the Uniden Grant or the Cobra 148 to get SSB. SSB is nice for the extended range as the legal power out is 12 watts PEP.

Hello Leland,

Thanks for the compliment re. thinking, but I honestly think many of us could've seen this. I'm just the guy who woke up this morning and saw the forest. As far as a group of very vocal 11m ops who would like to see this fail?...I don't think so.

I do believe that there are many that do not wish to trade in their "freebanding" activities to have their voices heard. I just want to reiterate that I am in NO way judging anybody's activities. I choose to run "hot, straight, & normal" because I AM vocal. Should you choose to join and continue with "business as usual" on the band...your vote still counts just as much as mine.(or that member that would like to see the 11 meter band reallocated for SWL purposes...read with my own eyes) Your 11m callsign is not in any way, shape or form tied in to your name and membership number, unless you make the connection yourself.(I personally did not.)

If you treat people with disdain, it is often their chosen response. Treated with a little respect and given a chance to regain some dignity, I'll wager that many might surprise you.
Thanks for your input and 73.

Mark

Thank you Jerry,

That means something coming from you. I personally just like the idea of mutual cooperation, but it's certainly not an overnight process. I've a few free moments right now and upon re-reading my post with all the typos and mistakes, it's a wonder my english prof isn't hunting me down at this very moment.

Another nice thing is that should the ARRL react quickly and start requiring a valid ham ticket, the Tech exam took my friend all of 6 minutes to complete. He got his start in 11m and the electrical principles, i.e. Ohm's law & Kirchoff's rules for voltage, were already known to him. The two days of studying were solely to acquaint himself with the commission rules/regs and the frequency allocations. Not such a tall order. Thanks again and 73.

Sincerely,

Mark

Greetings!

Thanks, but all of you should give yourself a pat on the back. A lot
of it stems from questions many people have had over the years.

The pages represent a part of all of us participating in discussions
that occur over the years we've been out here.

There is simply no way to "combine" all the knowledge into one "page".

All of you need the credit, for there is a lot more questions that
will be asked that will need answers.

It's what we are out here for, to learn, participate, discuss and
teach.

We couldn't have gone this far without each others help.

Greetings!

Mobile? Plan on anywhere between 100 feet, to several thousand - it depends on conditions.

Base? Same results.

Conditions? Ambient air noises, electrical interference, propagation [meaning skip, ground wave and sky wave effects], losses - including ground/terrain and electrical connections, and other stations using the channel.

Proximity to other stations that may not be using the channel, but are on others - also affects range and is part of the conditions your radio will have to work in.

Base to Base radios range is considerably farther. You can experience a minimum distance of 3~5 miles even when skip is reading S9 on the RF meter.

Also, other conditions you clarified on, that being antenna performance and radios own ability to work the environment it is in. Chances are, you will have at least 1 mile working radius.

The real answer relies on a set level of ground rules, in the USA we are limited to 150 miles. [Considering you can't unring a bell, you don't have a choice in how the radio wave will propagate.] If you live in a country under ITU regulations - some countries won't, or at least approve, of you communicating across their borders to other stations that the country in question - does not want in operation due to political or regional reasons.

If everything was ideal, that being; no air noises, interference, propagational problems, and you were left with the antenna, coax and ground losses alone - you can see close to 30 to over 70 mile radius of coverage from a Base station, with Mobile to Base operational range radius of 20~35 miles. Mobile to Mobile can vary, but a minimum distance of 5 miles with good reports is possible.

How many beam antennas have you seen where the instructions said to install a counterpoise? How many beam antennas have you seen with a counterpoise? You need to get an ARRL manual and read up a bit on antenna theory. Aluminum is a good conductor of RF and makes a good counterpoise.

This is the same dumb thing these illegal ops say all the time. I suppose if you listened on your local airport approach frequency and did not hear anyone you think it would be OK to use the frequency, or the local police, fire, or other frequencies allocated to another service. If you are not licensed/authorized for a particular frequency or band of frequencies it is not OK to use those frequencies even if you don't hear anyone else using them.

You won't get more than a mile out of a window mount.... If you don't want to drill holes in the interior, or mount an antenna ON the body of the vehicle, there is always the option of the Cherokee AH-100 handheld walkie-talkie. (this one has SSB). It works much better than the Radio Shack models, and are able to be channeled out, and modified for more power output. Be warned, DO NOT run this thing for too long on the batteries. This thing will eat up batteries REAL fast. Use the 12V power source (your vehicle)... I think this one you'll be happy with, now that I know your situation.....
Be Safe and have fun..

My posts were not aimed at you in any sense. In fact, I don't remember responding directly to your post, but to the aggregate of what I have read. You have to admit, this is getting to be a pretty big thread.

There are good CB operators and there are bad CB operators. The same goes with hams. Unfortunately, around the cities, which is where my CB time was accrued, most were bad by the time I left in 1978. Still, your point is well taken. I shouldn't have used a stereotype.

As far as "mindreading" goes. I think we can all tell when two people are talking in a manner that would not be conducive to being interrupted. Naturally, no one is expected to be one hundred percent accurate when making such an assessment.

Another thing, I am referring to simplex operation on frequencies designated for such use and which are not designated to be used as calling frequencies, etc.

If we maintain civility and decorum, treat others with respect (use a dummy load to tune your amp!) and offer our society a worthy means of communication in times of disaster, then we can rest assured that we will retain most of our frequencies and our right to operate on them.

> it. You are losing frequencies.

I am no longer a CB operator, so my comments were regarding ham
operation. I don't even remember the original post, so, as you can see,
I wasn't picking on you. In fact, I wasn't picking on anyone in
particular. That's not my style.

People are people, regardless of which radio service they operate. This
idea that CBers and hams are different species has to go. What should
happen is that we behave appropriate for the band we're operating on.

I have tried the Nugatron-- OK, it is by far the BEST commercially-marketed antenna out there.(compared to Wilson, Francis, Firestik, K40, etc.). But to be HONEST, it is nothing more than a bolted coil, truck driver antenna. I can agree, it WON"T hang out with the Big Bopper Stargun, OR the "55". The Black Al Capone is in a catagory ALL by itself..... ENOUGH SAID.

As one who lived thru it the first time, I can second your comments in
their entirety. But perhaps that is the root of the problem -- it isn't
1959 any more Toto. The Commission with the best of motives,
summer-intern execution, and some incredibly bad luck has created
something of a monster. One can extend sympathy and at the same time ask
why they seem to want to deny paternity.

Bringing CB up to the state of the regulatory art is certainly beyond the
present scope of the Commission if not indeed their ability. There are
bigger fish to fry. So there is probably room for a forum where the
present users can hash it out and do it themselves. The ARRL is not the
ideal choice but may be the only one.

Yo, Leland. I meant helical antenna, of course, I was thinking in Finnish, sorry. The kind of helicals they use are maybe four-five feet tall, and with an adjustable top.
CB in Finland allows ssb, FM and packet ( although they know that most software is for ham radio only).
And by carrier wave I mean output power, but being an old fool, I was thinkung in terms of the past (pre-Feb 2001) when only FM or AM wre allowed.
My foul-up.

Sounds like a 35 question multiple choice exam is all that separates us from some representation. Not a tall order at all. I think this is important enough to jump that barrier.(If you can call it that.) A side benefit is that all those who treat the No-Code Tech as glorified CBer's get to see democracy in action. That No-Code Tech ticket doesn't seem so impotent now after all. GO FOR IT!!!

Hi Dick,

I took my Tech exam last Sunday. It took me every bit of approximately 5 minutes to successfully(100%) pass. Go through the study guide once (score an 80) or twice(score a 100) and you're all set. This is certainly NOT too much to ask. It may even drive home the point to the ARRL elected "leadership" of what 11m ops are now willing to do to cast their vote.

I see it as a win/win situation. Eleven meter ops get more representation, ham ranks swell, and the ARRL is put on notice that some of it's tom foolery is no longer going to be without consequence. Good point also re. the No Code Techs that get a minimally higher level of respect than an 11m op. I've seen these fellows take their fair share of flames too. Yes, I do believe this would only lend more credibility to the cause. BRAVO!

Good point Mark,

I had my ARRL membership BEFORE I got my ticket. For full voting privileges, you need to have a ticket. This is actually more of an opportunity than an obstacle. As you know, I got my Tech last Sunday. Easy doesn't evn come close to describing it. The No Code Techs get just as much flak re. their status(or lack thereof) from their senior bretheren as 11m ops. All of a sudden that No Code Tech ticket in the hands of a disenfranchised 11m op takes on a bit more seriousness, eh?

The best part is that your name, ARRL membership number, and callsign do NOT tie in to in any way with your 11m call. So when you e-mail your rep that you're concerned with the treatment of 11m ops, they know your name and ham call, but they don't know whether you're 2AT###, 2SD###, KP###, or just John Q. Public on ch. 38LSB. The fact that you were willing to get your Tech ticket just to cast your vote further drives the point home that anti-11m activity by the league is no longer without consequence. BRAVO!!!

Sorry Mad Dog..... You're still in, WAY over your head. Aluminum
makes a GREAT counterpoise... whether it's a plane, car, boat, or radials
on an antenna. What can destroy it's ability to be one is a POOR
connection that's oxidized or corroded because of dissimilar metals
in contact. (on the 'same note'... copper and steel share this problem)
Better don that PFD before you get in any deeper....

And I agree 100% with ya' Ed! Decorum and civil pleasantries go a long way. My humble apologies if you indeed were not responding to my post. My bad for ASSuming it was directed in that manner, since you included my post in your response, below yours, it is obvious why I thought otherwise. Yes, the thread is getting quite long. The statement I made was in general and in response to radio etiquette, which doesn't take a ham license or hf radio, special skills, or above average intelligence to practice. Old rule here, treat people how you like to be treated. Give folks the benefit of the doubt until they prove otherwise. When a party is communicating, one can usually get a feel for the flow of the conversation after listening. Common sense should dictate when it is ok to break in on a conversation. If I hear 2 guys talking about the weather and the dogs ear infections for the last sixty miles I drove, I think it's ok to "break" or interject, or what ever you want to call it. If the two parties can hear you and do not respond, or tell you to "bugger off" they are rude, cbers or hammies. Funny thing though, one can almost find immediate examples of this on almost a dally basis on ham AND cb, almost NEVER on the freeband. Wonder why that is? I mean, you must admit, freebanders are way less uptight (in certain cases, I guess "anal retentive" would apply) than their cber or ham counterparts, or they wouldn't be there in the first place, no? Honey is better than vinegar!

Okay,
I apologize for implicating that aluminum does not make a
reflective element.
This is not what i meant to imply , however i still feel that aluminum is
not the best
choice for a counterpoise.
With no reference towards ground radials or reflective and directive
elements
included.
Now please explain to me why the (steel) mirror brackets on a aluminum
bodied semi-tractor must be connected thru the (aluminum) body to the
(steel) frame in order to achieve a appreciable SWR.
Is it because the mirror brackets do not contain enough steel to provide
sufficient capacitance and therefore need the additional mass of the frame.
Or is it because the aluminum body (which is quite large) cant act as the
counterpoise.
I suppose we could just build a inductor to make the mirror bracket look
bigger to the antenna.......

I donned my flame retardant vest and a PFD so lay it on me gentleman.......

Uh, Leland, swapping crystals would till get us wherever we wanted, if radios were not modifiable. I agree, no license, stay off the hammie bands, but in the same context, a hammie license lends your voice no more credibility to whine about us freebanding on channels where YOU have no business either, than it does for us to piss and moan about you minding your business. In other words, a hammie telling a freebander to stay off freqs where the hammie can't go carries the same merit as a freebander telling a hammie to mind his business when it doesn't concern him.

As someone who is definitely going to take the Technician exam w/the code, I like this idea much more than the organization of a "CB" league. I honestly think the league is asking for this themselves. I read QST, and quite frankly, there is often a desparaging word for CBer's. And they even included a piece "gloating" over the defeat of RM-9807 and describing how they voiced their opposition to it. You asked for it, you got it...Toyota! If the ARRL feels it can supercede the wishes of a group that it should have nothing to do with, then I feel it's that group's responsibility to react by employing the ARRL. Beest of all, it's legal. Is this not refreshing? Que bueno!!!!!!!

Mad Dog,
Neither aluminum nor steel "contain" any capacitance
at all. The only physical property aluminum and steel
share (electrically) is conductivity (and not much
difference there).
The material (aluminum, steel,cooper,etc.) in the
conductivity path has very little to do with an antenna
system's SWR. The only way I can see it having ~any~
affect at all would be at junctions that have corroded.
'Doc

Greetings!

As I said before, a lot of the conductivity between steel and aluminum has a set of problems.

Most trim, if not nearly all the aluminum in any vehicle, is anodized to protect it from corrosion, that is the first step. It adds an insulating coating on the metal. It will show a high resistance unless you scrape down past the anodizing layer to the bare metal.

The second problem deals with connecting dissimilar metals, their valences [electron orbits and willingness to share electrons] cause types of corrosion to occur, one being galvanic corrosion, with another due to oxidization, anther is electrolytic.

These types of corrosion cause insulation to occur as the aluminum metal "sacrifices" electrons to generate, or reduce itself to an oxide. While the galvanic event causes an eddy current that will form across the joint of the two different metals if any current is passed thru the joint in the presence of oxygen and the inherent water vapor present, accelerating the reduction of both metals to oxides and thereby creating an insulating joint. While electrolytic uses water as a dielectric, and within the typical water drop or salt spray from winter de-icers aka "salt-shakers" is a small amount of minerals suspended and works like a solution to form eddy currents like a battery and does generate a current when no external current is flowing in the joint - and once again forms an insulating joint as it reduces the two dissimilar metals to their oxides.

Aluminum, when connected using aluminum hardware, and the use of non-oxidizing sealants - the exterior metal forms an oxide, but is transparent to RF due to the skin effect and the layer of oxide are at different depths of the metal. RF skin depth is deeper and is not affected by the overlying oxide. This works as long as the original joints are electrically bonded and sealed from the environment.

You are correct in that aluminum is a poor conductor if the oxide or the anodizing process is not removed to expose the bare metal. This problem occurs in any metal but occurs at different rates. Aluminum antennas need to be sealed with an anti-oxidizing compound at the electrical joints to maintain the connection. But at HF range of RF, the properties of the metal are still transparent.

Another point to note, the velocity factor of aluminum is slightly lower than other metals, with silver and gold having higher velocity factors - so the radiator length is slightly different and since it's

non-ferrous, leaves no residual magnetism but can generate a magnetic
field if a current flows through it.

In the basic answer to the question you raised, consider the above
when the joints that make up the conductive path, can be highly
resistive to RF [show a high impedance path]. It's due to oxidization
or the reduction and the insulating effects, that has already occurred
as the metal is exposed to the environment. There is a difference
between bonding the joint electrically versus a simpler mechanical
bond for strength.

You can say by extension, not context, the reason CBers end up on the Ham bands is precisely due to the desire to freeband, where one oops ends on the Ham 10m band. Sometimes that "oops" is not an accident either as we both know. So if there where no export radios, modified Ham rigs, or modified CB's, all of which are not permitted for use on 11m, there would not be a problem, and one less complaint from the Ham community. This is not a question of "creditability" but of "responsibility", and "accountability", both of the later seem to be a foreign concept to the freebander.

A "kill file" is a place where unwanted E-mail, and news group postings, end up from people whom you don't wish to read their material, you just don't see it. In reality it is a poor excuse for lack of self control where one can't resist reading the offending material, and so doing getting upset. They also don't work when you see parts of the posts, you don't want to read, quoted by others whom you do which to read their material.

JR, I agree, it doesn't automatically give one the right.

Leland, you can substitute almost any word for "ten meter, mod-friendly radios". If there were no guns, there would be no shootings. Sure, and if there were no cars, there would be no accidents. Come on. Accountability and personal responsibility are not mutually exclusive OR inclusive to any group and you seem to want to do away with both, since in your mind the populace is not capable of executing what you deem to be proper, or acceptable degrees of infractions. Your opinion of the matter with a crass, blanket statement against an entire class of radio operators (like it or not, that's what they are) portrays what little knowledge you have of these ops.

The fact that there are freeband operators speaks for itself. One, no accountability, because there is a lack of FCC enforcement action so the freebanders do what ever they please, and two, no responsibility because of the infantile logic where somebody must be harmed FIRST, before they understand why the rules are the way they are.

It's because of the above two issues we have kids taking their parents' guns to school and shooting each other, drivers who feel that they can drive 75 MPH through a school zone during school hours when they don't see any kids around because they were looking the wrong way, drug dealers selling Crack (victimless crime it's not), and so on. Then they stand before the judge denying accountability for their actions because it was somebody else's responsibility why they turned out the way they did, or why it happened. The path your logic takes can be used to justify the elimination of any kind of control which creates a stable society that all can live in. Just imagine what the results would be if each of us did just as we pleased with no limits of any kind where we just ignore the rules, we were not held accountable for those actions, and it was not our responsibility to be sure we did not harm another. That at its' core is the logical result of your reasoning, Pure Anarchy, just as the title of this thread states.

These same hams would scream like hell, though, if they lost their ability to use modified Alinco dual-band handhelds on the FRS frequencies (because they're too cheap to spend $50 on a dedicated FRS radio) or could not longer run their 100-watt Kenwood HF radios on the CB band.

Be careful what ye hams ask for. You just might get it.

Crack
(victimless crime it's not), and so on.

You don't get out much, do you?

kids taking their parents' guns to school and shooting each other.

Why? Because the kids are being fed drugs like ritalin, prozac, luvox
and the like in the name of combatting some "syndrome" invented by
some
federal bureaucracy in conjunction with a bunch of "quack doctors" who
btw have the unique distinction of being the third leading cause of
deaths in this country today. We have parents that are unable to
spend any time teaching their children the difference between right
and wrong or that their actions have certain consequences, because
our government unconstitutionally taxes us to death to subsidize their
dreams of some one world government, in the process requiring both
parents to work leaving their latchkey children at home to fend for
themselves. You want to talk about responsibility and
accountability?

drivers who feel that they can drive 75 MPH through a school zone
during
school hours when they don't see any kids around because they were
looking
the wrong way.

Why? because we have an insurance industry that takes our money and
provides
us with this false feeling of invincibility, knowing that if we hurt
someone
with our negligent actions that they will be there to clean up the
mess. Gone
are the days when the motive for driving in a safe and sane manner was
primarily

because we sought to treat others as we ourselves would want to be treated. No
insurance company can provide that type of intent and motivation to "do the
right thing." Here's your government regulation in action.

It is not now nor ever was governments responsibility to provide its citizens
with what you refer to as a "stable society." The Supreme Court of the land
has determined time and time again (and rightly so) that the citizens have no
right whatsoever to expect any protection whatsoever form law emforcement and
its relative entities. Yet they keep trying to take our constitutionally
protected right to bear arms away from us. Let's see....no police protection....
no ability to protect ourselves....Is this your idea of control, Leland? This
is my idea of Tyranny.

If you're so anally retentive as to require this type of control in your own
life or the lives of others, the last thing you're looking for is responsibility
and accountability from others, much less yourself. Anyone who is willing to
sacrifice their God-given rights for the empty promise of security and protection
from a police state that is not legally bound to provide those things to its
citizens in the first place deserves neither security or protection. Get rid
of the institutions that have relieved us of our responsibilities to our
fellow men and our duties to one another and then we can have the stable
society that you erringly speak of. Until then and as long as our government
believes itself to be the "peoples babysitter," as long as people think that
governments job is to "take care of them" and until this country fully returns
to the principles of self-reliance that made it the great country that it
partly still is or was, keep praying for control.....There is a new world
order coming, only not the one everyone is reading about in the media
and press.

We now return you to your regularly scheduled program, already
in progress....

I apologize to the ng members for going off topic
there.............................

Jack

******,

And since the word is used in the subject of
this discussion.....

anï¿½arï¿½chy (nr-k)
n., pl. anï¿½arï¿½chies.

1.Absence of any form of political authority.
2.Political disorder and confusion.
3.Absence of any cohesive principle, such as a common standard
or purpose.

While I think that all of us would agree that the presence of cohesive
principles,
common stantards and purposes are useful things, I for one don't
require any
"political authority" to see to it that my life goes the way that it
should.

As I understand it, politics is simply the "art of confusion." I know
where
confusion comes from.....I think the #2 definition speaks for
itself.

Jack

More like the dumb parents keep load guns stuck in a draw where the kids can get at them instead of a locked gun cabinet. The parents have to be held accountable for their lack of good sense in gun safety, and they have a responsibility to make sure their kid does not shoot somebody else's kid.

> drivers who feel that they can drive 75 MPH through a school zone

> Why? because we have an insurance industry that takes our money

...to pay for the death and injuries caused by irresponsible drivers who speed, and or drive drunk on our roads. Of course if people were more responsable the rates would be less too.

The rest of the drivel was deleted because it sounds like the crap the gun toting nut cases in the thumb area here in Michigan shoot off at the mouth about. The same people who brought you the Oklahoma City Federal Building bombing. And you want me to believe that baby, in the Fireman's arms, deserved to die because we live in a police state, and the bomber should not be held accountable for his actions or take responsibility for them! What a sorry excuse for a human being you are.

Oh really? What do you know about the USSR? You ever been there? My coworker down the hall is Russian, lived there until 6 or 7 years ago, and things are NOT so great over there, unless you are one of the few lucky people who have money. You want to talk with him? He will disabuse you of any rosy notions you may have about what it's like over there, I assure you. His parents come here to vist for a month one year, and he goes there for a couple of weeks the next. I also have another Russian buddy at one of our offices across town who is also Russian. He came back last summer from visting his family there, his parents and his wife's parents. Same story.

And you know why they build most of their own equipment? Because they don't have the money to buy any. You want to know where the parts come from? Do you know the quality of the stuff they have to use?

Source record: 73158

"The fact that there are freeband operators speaks for itself. One, no accountability, because there is a lack of FCC enforcement action so the freebanders do what ever they please, and two, no responsibility because of the infantile logic where somebody must be harmed FIRST, before they understand why the rules are the way they are."

First, Leland, there is a lack of enforcement, because there is a lack of funds. There is a lack of funds for 11 meter and enforcement against pirates and freebanders EXCEPT ops deemed a safety hazard (which can be as broad as they wish to interpret) or repeated, wanton nuisance complaints because they are not a priority. They are not a priority because the dangers you and other's cite are exaggerated. Sure, air freqs and certain others have the possibility of calamity, but you know and I know we are not referring to those freqs.

"It's because of the above two issues we have kids taking their parents guns to school and shooting each other,"....

Let me interject here and say you are dead wrong. We have kids bringing guns to school because we took God and paddling out of the school, because as a collective whole, we are afraid or intimidated by our kids and don't kick their collective asses when they need it because the government said it is wrong to, because we have parents who don't give a damn who their kids friends are or what they are doing or where they are. You are still avoiding the obvious, Leland.....personal accountability, which you appear to champion, but actually accomplish the opposite through advocating the confiscation of items that you deem objectionable. It is much easier to point a finger than it is to admit our failure as a country with education, health care, children, and birth control.

"...we have drivers who feel that they can drive 75 MPH through a school zone during school hours when they don't see any kids around because they were looking the wrong way,". And there are penalties for such acts, and I agree they should be stiff. Here, we are talking a direct impact on human lives.

" drug dealers selling Crack (victimless crime it's not), and so on"
Who is hurt by that act alone, Leland? The user only. That is none of your business. Do not give me that indirect trickle down effect on society either, such as stealing for money for drugs....it's a direct biproduct of attempting to legislate morality. Not fair? You are right, it's not! Stop legislating morality, all your related complaints to drugs would disappear.

"Then they stand before the judge denying accountability for their actions because it was somebody else's responsibility why they turned out the way they did, or why it happened." There rings some truth to this, if the bastards had a father present who should have kicked their asses when they were a kid, or a mother who gave a damn, or someone who had some time, let's just say the prisons would have more vacancies.

"The path your logic takes can be used to justify the elimination of any kind of control which creates a stable society that all can live in." Not any kind of control, Leland, only those rules that we may deem corrupt, or unconstitutional, or outdated, or mundane. There are a ton of them you know, but bucking this particular one just rubs you the wrong way, for whatever reason I still fail to grasp.

Just imagine what the results would be if each of us did just as we pleased with no limits of any kind where we just ignore the rules, we were not held accountable for those actions, and it was not our responsibility to be sure we did not harm another." Imagine. It's easy if you try. Natural selection would prevail.

"That at its' core is the logical result of your reasoning, Pure Anarchy, just as the title of this thread states." Last time I assumed it got me in trouble, but what the hell, life is all about risk, eh? I assume you understand anarchy by definition. I also assume you are old enough to remember true anarchy and civil disobedience in our streets. And lastly I assume you were never witness to true anarchy, otherwise, you would not classify shooting skip on an off channel (you know the freqs) as anarchy.
--
Leland C. Scott
KC8LDO

I hardly think talking on channel 41 or 19A merits fire and brimstone hailing from above, nor blood in the streets, as anarchy may suggest.

And we have the coalition of freebanding over amplified rule busting CBers
to thank for that too. It's not as if some Hams don't have enough reason
already to complain about some CB operators. Don't forget that's how come
Hams can't buy new off the shelf amplifiers that work on 10m without having
to screw around with modifying them first.

I doubt that. I have read the same drivel from different left wing group web pages, and printed publications dating all the way back to the early to mid 70's, when I was still in high school. Same old crap, for example, where some people claimed Bill C. would never leave office, he would declare marshal law yada ... yada ... yada. Never happened.

Ah hell, Leland. You meet one poor sap from Russia and base the entire monetary economy of what was the former Soviet Union by what this poverty exile tells you? St.Petersburg in the Tampa Bay area has a sister city in Russia. We get Russkie tourists here all year long. I've seen pics of their homes and families and quaffed ale with them in our local establishments, and they are no different than us except they speak a different language. Yea, the economy sucks, but I still see more and more each tourist season, so it has to be getting better if they have the money to vacation here each year. I know I can't afford to go to Russia every year (yet) and I see repeat visitors here all the time. Same thing can be said for here. If you don't have money, it sucks.

Bill by Paying the fine this is usually a good sign of someones guilt. Do you go around paying fines for something you havent done? I hope not. Do you think that Exportsrus should pay his fine? Weather you like it or don't like it you know as well as I do he is guilty of selling illegal amps and more. In fact didn't he used to brag about it here, If i have time i can dig up numerous post regarding this. He should pay the fine like a good boy, and think of it as a pee pee spanking...

I agree, I am really getting kind of sick of all this stuff. There are a lot of righteous snobs out there who think that one group is better than the other. To that "Bull!". Let 's pls move this topic along to where it belongs, "File 13" or simply "the can!"

# 1542. Re: A new twist? JOIN THE ARRL!

Newsgroup: rec.radio.cb
Date: 2001-02-13 02:08:22 UTC
From: City_Slicker <notenuftime@foolscorner.net>
Message-ID: <96a4um$mu4@dispatch.concentric.net>
Source record: 73173

Jerry, I think you articulate many CBers feeling toward radio use and your idea to join the ARRL certainly has some merit.

I think you really hit the nail on the head when you talk about higher powered clean running equipment. When legalized all the legitimate manufacturers could jump into the game which would hopefully force the others to improve. It would spawn a whole new generation of radios as well.

I don't think it is an issue of taking a test or not taking test. It is the archaic bureaucracy and protectionist attitude of the Ham cult. I for one am not interested in the difference between a resistor and a transistor. I am not interested in code but yet to run an amp or to talk on all bands I am required to pass a test demonstrating a proficiency in these areas, What does one have to do with the other?
If our Police, Fire and other emergency personal were required to pass these tests we wouldn't have many or at least many that were certified to talk on the radio.

I don't want to start another thread of the why and why not issue because it has all been said before and most minds are made up.
The only way to change is by a voice and your suggestion to participate in the ARRL would be worth a try. A national grass roots campaign would be needed with the participation of the many CB shops who could stir an interest in the truckers. They represent the highest # of users. This is an Idea that is worth exploring.

Has anyone confirmed that a License is not required for a vote?

I guess people like Boobner can bring some radical changes. The Ham community will thank him one day.

It has always had a removable face. But the lack of a good noise blanker and a real RF gain would be a plus. It has some nice feature like dual channel watch and scan. It is easily modified to expand channels but it take two hands to make the jump out of 1-40. Tricky at 70 MPH.

> does one have to do with the other?

The purpose of the technical tests associated with Amateur Radio is due
to the
freewheeling nature of Amateur Radio and its ability to operate on a
myriad
of frequency bands (each with their own propagation characteristics) and
modes of operation, voice (AM, FM, SSB and Digital), Code (old fashion
but
still in use), Digital modes such as RTTY, PSK, FSK, and the newer
stuff,
and of course Video and Microwave stuff along with Satellite and Spread
Spectrum. The main purpose of the tests is to guage that YOU understand
the very basic subject matter and how it relates to the technical world.
Examples are to know about Harmonics, RF Exposure, Electrial Safety, how
the bands are set up and the limitation due to technical and man-made
reasons
such as International Agreements and Third Party Communications.

It isn't hard to get the license, the study material makes it easy to
pass the test. 5 WPM code can be mastered in about 2 weeks. (I know,
the code is old fashion but this is outta my hands, BUT THE ITU IS
WORKING
ON ITS ELIMINATION AS A MANDATED REQUIREMENT) and General will give you
access to 9 HF bands also!

> If our Police, Fire and other emergency personal were required to pass these
> tests we wouldn't have many or at least many that were certified to talk on
> the radio.

The Emergency Services use radios locked on a frequency, have no VFOs
and
are what is called ROCK BOUND, meaning the channel is IT. Emergency
Services still have to get licensed and their frequency is coordinated
by
APCO.

Yes a trusted source scour the internet, Now it doesn't have to be a CB antenna in fact you would think a cb antenna manufacturer would make that ridiculous claim... but no they know better than that. Just remember this Johnny come lately just called you on your ridiculous claim. And you get mad at me you should be mad at yourself for selling bullshit and saying what you did In fact just point me to the page in the Arrl Antenna Handbook, or better Yet point me to a website that backs up your idiotic claim... I will be waiting ...I didn't think so ..

Where can i find info on the Al Capone antennas?
Saw the Starguns for the first time tonight,man have i been missing out
or what?
Their mobile beams really blew me away.......

You must be kidding, only the user is hurt? What about the parents, sisters, brothers, grandparents, other family members and friends of the person who dies of an overdose of the crack they got from the pusher. I guess they are not hurt.

Hi,

I believe Dick has found a clause in his ARRL handbook stating only licensed members enjoy full voting privileges. I too see this as more of an opportunity than an obstacle.

No-Code Tech holders are often maligned as "CB Techs" and such. Well, perhaps it's time for BOTH the "chicken banders"(I wish I had a buck for every time I heard/read this one) and "CB Techs" to flex their electoral muscles.

I've scoured my membership materials and have not seen that clause, however, based on past posts from Dick and Jerry, I find them to be "straight shooter's" to be trusted. Yes, I do my homework. There are presently approx 680,000 licensed US hams. As of May 30, 1999, 206,854 of them are No-Code Technicians, that's 30%. That, my friends,(and I mean that) represents the single largest group in amateur radio.

I'm already a league member and on March 10, I'll be visiting my friend and we'll be going to NYIT in Greenvale, NY so I can sit for my Tech exam. He's already licensed and will be going for the General exam and the code.(not to mention moral support for yours truly) I'd like to try my hand at the code too so I can hop on the 10m Novice sub-band...we'll see. Thank you Dick, your kind invite was the push that finalized my decision.

Again, I really don't see this as an obstacle. I've taken the practice tests on www.qrz.com and quite frankly, they're kind of a joke.(no disrespect intended) I agree with a previous poster that it may even demonstrate to the league a willingness of 11m ops to get their votes "counted." I see it as a good thing.

You are very lame Train, you post a bullshit statement and then cannot in any way, shape or form prove what you say is even remotely close to being true then you add me to your killfile... haha .. talk about funny... I can hear you at the donut shop talking to the other cber.. "Yep that black Al Capone antennas are sure something hell when you put a extra 5kw into them they really start to ces sir its got this magical power that when you put more power in the gain of the antenna goes up not to mention the 5kw extra I just dropped in to it. Now I get it Train ...hahaha ...They certainly didn't confuse you with Brain now did they...

Nobody appointed me resident genius on the ARRL, I just quoted the membership blank in my Handbook.

Yes, Element 2 is something of a joke. Element 3 has been basically the same for eons -- a tour thru ways to get yourself in the soup. It is where the FCC discharges its duties under treaties re things like third-party traffic and rf safety and checks to see if you have ever heard of sunspots. It is a study issue pure and simple; electronic geniuses need not apply.

If I encouraged you to take the code test, good for me. It just seemed that if you had the hardware anyway you might want to use it. Code is an emotional issue with many and that is no way to learn it. It is a hand-ear skill right up there with things like flying an RC model or playing Nintendo; no one is worth a damn the first time. Investing one's manhood in it is flat-assed stupeeeed. Besides, you might learn to like dittybopping. Passing the code tests also opens the three Novice bands to you and 15 meters is not that hard to do depending on your hardware. With most of the world at 5wpm or going there you might have some DX company. If you learn code the right way, at 16wpm, you should have plenty of time to have it over by 10 March at two letters a day.

If you want the straight poop on license counts, see http://ah0a.org which also is the place for Morse University, a well-respected piece of software. You are correct on the numbers but there is a caution here: the first no-code Tech licenses expire in March so their numbers are probably swollen by the lack of expirations in the ten years since they began. Also, the numbers now include some code-tested Techs. Because the fee on the vanity call system covers ten years, licenses are then re-issued for ten so expiration schedules are all over the place. It is the only data available but reading them makes tea leaves look like child's play.

There is no doubt that the technical and publication services of the League are first-rate and in fairness to them they have taken on the function of the DSJO (dirty, shitty jobs officer usually the newest Ensign on a ship) for the service. For that reason alone, I am considering rejoining. The political aspects of the League have been a mess for years, perhaps inevitably given the nature of the beast. The present management is better than some previous ones which is not saying a hell of a lot. If you believe you can make changes, by all means.

Good luck with the exams. In the meantime, hang by your thumbs and write if you find work. In the meantime, use my e-mail if I can be of use.

Dick NBK

You can use the attached antenna (rubber ducky-type), its very similar in looks to a scanner antenna...., or you can attach an external antenna (i.e., magnet mount, for your steel body car).. if you want.
The range is very good for what type of radio (walkie-talkie), that it is..
I own the AH-27 (the AM only version). It has been channeled out, and modified for optimal output. It works very well..

That's right, JR. Also, those who are injured or killed when being robbed by
Crack addicts are not hurt either. And you can't count the loss of personal
property ripped off so someone can buy drugs. Remember, this is a victimless
crime. If we say this enough, you might finally begin to believe it.

This is a victimless crime......
victimless crime
victimless crime
victimless cr.....

Jack Thurston ranted:
>Because the kids are being fed drugs like ritalin, prozac, luvox
>> and the like in the name of combatting some "syndrome"
>

Whew! Strong statement.

I submit that if you EVER come up against ADD in your children (or your spouse), you *may* change your mind about whether this "syndrome" is real.

Meanwhile, JR said:

>Instead of being taken out behind the wood shed with a good switch.

I'll grant that there needs to be a lot more of THAT, also.

QRM
---
A little boy in church had been warned numerous times
by his father to be quiet during the sermon. Finally, the
boy *crossed the line* one time too many. His dad
scooped him up, threw him across his shoulder, and
began marching toward the back of the sanctuary. And
everyone present knew what was going to happen.

The little boy looked up from his dad's shoulder and said
to the onlookers in a loud voice, "Y'all pray for me, OK?"

you know it is getting out of hand when you report someone for selling
LEGAL equiptment. a uniden pesidenmt washington is a legal type accepted
CB radio, the D-104 is also perfectly legal.

god what a moron

QRM, we created the crime by making certain substances illegal which the government saw as an easy cash crop. Want another multimillion dollar influx of revenue? Ban another substance. Lets see, what can we go after next? How about caffeine? It certainly is addicting, NO question there. It is also a drug, as tobacco. It causes health problems which can lead to death. If we beieve the propaganda that as adults, we NEED to be protected form making our own decisions, we deserve every damn thing we get!

I have a Uniden Radio, a Washington, that has Uppers and Lowers like yours. I love it and used to use it often. However, it is now considered an illegally modified radio and it IS illegal to transmit on any of those frequencies.
Ain't that a bitch? :-) I guess you could say I Voobnered myself!

I was hoping that he had a site where i could view them.
I saw the group discussing them on the comparison between the Starguns(WOW),
Nugatrons(typical open-coil broadbanded shootout style), Jo-gunn's(you know
why Canadians do it doggy-style? So they can both watch the hockey game..)
They say the Capone blows them all away.
Damn i want to check this thing out!!!!
Do you have any experience with the mobile beam that Stargun makes?
I think i would mount 2 on the truck, using a duplexer (i think that is the
proper term
cause i dont want to co-phase,i think) to point 1 forward and
1 backwards on opposite sides of the truck.
Thank you for using AT&T
Let me know if you find a picture of Capones twig (the antenna that is)
Thanx for the info Train and Keep on Truckin.......
(You might be a Trucker if the power supply for your Ham rig burns diesel
fuel.)

What is the legal maximum antenna height for a base station?
I've got mine mounted on the roof the highest point from the roof is about
thirty feet which puts it at about 55 feet from the ground.

Qrm2000,

Well, I know enough about ADD to keep my kids
out of the federal school system.

http://keirsey.com/addhoax.html

Escape the federal baby-sitter mentality and
your children can live a normal life. The first
mistake is to think that the gov't gives a shit
about you or anyone else in the first place.

They're our responsibility, not the governments.
The sooner we figure out that we are no more than a
"commodity" as far as they are concerned, the
healthier we all will be.

Jack

You are allowed to go 200ft. high without FCC approval,
however you need to check with your local ordinances before building.

Rick,

Mad Dog has "missed it" again.

Rule 8 - Antenna Height

{A} "Antenna" means the radiating system (for transmitting, receiving or
both) and the structure holding it up (tower, pole or
mast). It also means everything else attached to the radiating system
and
the structure.
{B} If your antenna is mounted on a hand-held portable unit, none of the
following limitations apply;
{C} If your antenna is installed at a fixed location (whether receiving,
transmitting or both) it must comply with EITHER one of
the following:
[1] The highest point must not be more than 20 feet (6.10 meters)
higher than the highest point of the building or tree on
which it is mounted; or
[2] The highest point must not be more than 60 feet (18.3 meters)
above
the ground.
{D} If your CB station is located near an airport, and if your antenna
structure is more than 20 feet (6.10 meters) high, you may
have to obey additional restrictions. The highest point of your antenna
must
not exceed 39.37 inches (1 meter) above the airport
elevation for every 109.36 yards (100 meters, 1 hectometer) of distance
from
the nearest point of the nearest airport runway.
Differences in ground elevation between your antenna and the airport
runway
may complicate this formula. If your CB station is
near an airport, you may contact the nearest FCC field office for a
worksheet to help you figure the maximum allowable height
for your antenna. WARNING: Installation and removal of CB station
antennas
near powerlines is dangerous. For your safety
follow the installation directions included with your antenna.

73,
NAO911/Jack

Rick,
Check your local ordinance. Also, you may want to check and see if your
home is in an "Association" controlled development. Here in Ventura, CA, it'
s 20 feet off the roof, or, a total of 60 feet off the ground.

Jeff

All right thanks for the info looks like I'm going to have to lower it ten feet.
Can't really say that I agree though.It can be 60 ft. off the ground but only 20 ft. off the roof, what difference does it make?

Hey I just thought of a solution build a chimney 10ft. higher than the ridge line.
HEE HEE HEEEEE
Thanks again.

Wow part C sucks. Just about every 5/8 wave antenna for 11 meter is 21+
feet in length. I guess it's illegal to mount any of them on the chimney,
which is usually the highest point on a house!

Hope the FCC doesn't drive through my neighborhood.

Matt,

Just make sure that the feedpoint is exactly 37
feet above ground. The antenna performs optimumly
there and that should leave you a few feet under the
limit.

73,
Jack

Greetings!

When it comes to "sh*t", do you understand some aspects about FM
versus AM? Capture ratio comes to mind.

And with all the AM traffic, there will be a more limited range on FM
due to the effect. To FM, AM appears as excessive noise that the FM
carrier will have to overcome.

No bull about it.

On Tue, 13 Feb 2001 17:49:39 GMT, while the modem was ice fishing with
the Mouse, "taxi driver" <taxidriver@uplink.com> dissertated the
following:

:+> They are asking about FM 4 watts <snip>

Regards!
:+> Andy <+:

... You know your radio is really Modulating when...
... Elvis shows up at your doorstep and asks to use
... your Microphone!!!

As usual Mad Dog is confused. The 200 ft limit has nothing to do with cb, as the limit for a cb antenna is far below that. If you are within a certain distance from an airport, you must get approval from the FAA to go above 200 ft, not the FCC.

Mad Dog wrote:

The same propagation characteristic will apply for FM as for SSB, CW, or AM
or any other mode.

Not hardly JR. Thats why cw is the preferred mode, next is ssb, then comes
am, then FM for long distance communications

# 1614. Re: 28.085Mhz: Pure Anarchy!

Newsgroup: rec.radio.cb
Date: 2001-02-13 23:53:09 UTC
From: Jerry Oxendine <joxendi@bellsouth.net>
Message-ID: <3A89C8E5.431F@bellsouth.net>
Source record: 73345

Jack,

I, for one, can see both sides of this issue, and some others as well. While I am as independent as anyone else in my wish to remain free of as much government intervention and/or "care" in my life, I also recognize that various forms of national government(s) have existed since the earliest times of man. None of them, certainly, were/are perfect. Yet, on the other hand, one must wonder *why* they have existed. Other than the quite obvious reasons of certain groups, individuals ruling because of their lust for power. money and simply because they *can*, governments have existed because anything else results in mob rule, or clans and fiefdoms that constantly struggle for power.

Now, let's take this to the narrower issue of the RF spectrum. As, I assume, you are a communications specialist, I must also conclude that you *do* have understanding of the nature of RF propagation. Imperfect as our domestic government is, we seem to forget that it DOES provide more individualism than most other governments of the world. We must also realize that the clans and fiefdoms *already* exist within our nation regarding all facets of our lives. Some want TOTAL government care--cradle to grave in one respect or another. Others want minimum gov't involvement in their (read ME) lives. Some want this, some want that. So here we arrive at the clans and fiefdoms in the RF world. Surely, you know that most of the lessons regarding propagation and the use of spectrum have already been learned. We have, to narrow things down, CBers, we have hams, we have the entertainment industry, we have the police, aviation, and commercial entities--each wanting a piece of the spectrum pie. As I have said before, the underlining issue seems to be the ones who want NO RF control, and those who believe, and I think, rightly, that separation and control are imperative. Anything less would be nothing more than the mob rule I spoke of earlier. As, I hope, you are a responsible and knowledgable radio technician, you must know that the above statement is true. OTH, no system is perfect, and such is true with our own approach to spectrum management on a national level. Yet, I still submit that that system gives many more ordinary citizens just like me more access with LESS restrictions than many other governments over the world. Even in the UK, for example, I believe one must have a permit for a TV (Britons may correct me if I am wrong). I am aware that many countries would place a person in a cold, dark dungeon if he were found to have a scanner--even in his own home. It is true that many US localities have ordinances against mobile scanners, yet there are just as many states (NC, for one YEA!) that don't have restrictions against them. During the Gulf War, it was well documented that an Iraqi(?) ham was secretly transmitting information for which he would have been shot summarily. We Americans seem to take for granted

that which we DO have and forget what others DON'T! SO. Although our FCC and its rules are not perfect, it is safe to say that the Comm. Act of 1934 did, and does, a pretty good job of making it possible for ALL citizens to have SOME access to radio spectrum. While the "fences" erected to keep the "clans" apart chafe on the haunches of those who would love to do anything, anywhere, anyhow on any band with anything, those regulations (fences) have done a fair job so far of, not only separating the "clans" (various entities with a need for radio), preventing them from "fighting", BUT preventing all those radio signals from "fighting" as well. That, of course, would cause mayhem or the chaos that Leand spoke of. Without those fences, groups would fight against each other with more power, BIGGER radios, more power and even BIGGER radios ad infinitum. An excellent example is the CB afficiandos. Parallel to the issue of government or no, CBers with their own agenda--perhaps the desire to be the BIG Kahuna on frequency, or as a reaction to those who do--have "fought" with bigger rigs, bigger amps, more "channels" until we have reached the point we are at now.

I would also believe that you surely must know that the incursions onto 10 meters are the result of the "export" radios that Leland mentioned. But only partly. Of course, there are other issues such as the willingness of an operator to break the law because he thinks he is not "hurting" anyone. A "fence" was constructed at 27.405, another at 26.965, and another at 28.000. Just as a rancher will construct fences to keep breeding stallions apart, the FCC constructed fences at band edges to protect the users of certain bands from encroachment and interference. Not perfect, but effective IF everyone recognizes his "pasture" and remains in it. The Amateur community is VERY upset because they have these rogue "stallions" in *their* pastures. CB was supposed to be for everyone--a low-powered, cheap way to communicate LOCALLY. While there were technical reasons for putting CB on 11 meters, FCC was not ignorant of the fact that it was possible to communicate over long distances on that band. As you know, this was the reason for the power and distance restrictions (fences)...to minimize interference. Yes, it IS natural for people to want to see if they can talk to what they can hear, but one does not HAVE to do it. You could, for example, whisper in my ear all day long, but I *COULD* ignore you.

Finally, the reactions the "anything goes" guys are getting only reflect the alarm on the parts of many people who know what would eventually happen if the present trends in CB amps, mods, "freebanding", and "export" radios are allowed to continue. IMHO, the "fences" MUST be mended quickly. Otherwise, the "stallions" will be in the 144 MHZ pasture, the 155 MHZ pasture, the 40 meter pasture, the aviation pasture, and every other RF pasture. Earlier in this ramble, I mentioned the imperfectness of governments including ours. One of our Congress' failures was to render impotent the very agency it created to build and mend RF fences by removing its funding. That issue will HAVE to be addressed, either BEFORE the stallions get out, or as a result of same. I fear it will be the latter. The "horses" are already fighting over 28.085.

Respectfully,

Jerry

excatly, this is why I don't run 11 meters in my house anymore.

75 meters is where I hang my hat. and I can run 1500 watts lagally!

I just wish I could afford an Amp.

Tax refund will be here soon, then I'll be looking for a SB-220.

Wrong Helmut.....the same propagation characteristics do apply, no matter what the mode. What differs is the readability, due to the inherent characteristics of each.

Helmut Sweenie wrote:

I believe Al Capone(AKA JB Stone) is out of Buffalo,NY. He makes the
Youngstown break almost every year he'll probably be in Detroit and Toledo
also. But I still like the Stargun Big Bopper for the simple fact it is
modular. You can change shaft lengths and coil designs.

Sorry, but propagation does not distinguish between modes, now the mode may determine how well the signal is copied, but as I said, propagation characteristics are the same for a signal regardless of the mode.

Martin,
I don't want to get into it all of the "stuff" could be condensed into a test the equal of driving exam. But that is not the intent of the Ham cult they want electronic hobbyists, EE's etc. People using CB have a myriad of interests as you can tell from this group. There are very capable technicians, hobbyists and people that want to pick up a mic and talk. Not necessarily talk about radios and how they work but just talk. That is a concept that many Hams can't understand. This is why the Ham hobby will die with its aging membership. There are fewer and fewer interested in the home build, hobbies aspect of radio. This is a plug and play society that is short on leisure time and less tolerant of old guard bureaucracy.

Enough said already this subject has wasted too much time in this NG. It would be a much better place if the "tickets were left at the door when entering the rec.radio.cb newsgroup. If the talk of amplifiers, peaked up radios, shoot outs etc offends your ideals then don't come in.

Treat it like X-rated radio.

In article <3A89C8E5.431F@bellsouth.net>, Jerry Oxendine
<joxendi@bellsouth.net> writes:

>I would also believe that you surely must know that the incursions onto
>10 meters are the result of the "export" radios that Leland mentioned.

CB'ers were operating out-of-band long before microprocessor-controlled
"export" radios were being produced.

Ever hear of a Siltronix VFO? Quite the rage back in the 1970s.

Yes, but not to the extent of today, and not in the ham bands so blatant
ly as now

>
> Ever hear of a Siltronix VFO? Quite the rage back in the 1970s.

I've probably heard of "most" HF radios produced for the civilian
market.

Nothing I have posted was meant to "slam" anyone, only to present facts
and opinion related to the 28.085 issue.

The intent of the test is to demonstrate a workable knowledge under international regs, when you can get the United Nations ITU group to drop the treaty, then the no-test hobby radio will be in full swing, until then, a test will be required.

> they want electronic hobbyists, EE's etc. People using CB have a myriad of
> interests as you can tell from this group.

Check out the myriad of nets meeting on the different meter bands (160, 80, 40, 30, 20, 17, 12 and 10 meter bands) and the subjects will surprise you! It ain't only CB!

There are very capable
> technicians, hobbyists and people that want to pick up a mic and talk. Not
> necessarily talk about radios and how they work but just talk. That is a
> concept that many Hams can't understand.

Hams don't just talk, they communicate, it is as much an art as a science.
A lot of folks want good, cheap reliable communications but I don't think
that the POWERS TO BE will allow people to have unfettered access to communication gear. The main protest against hobby radio in the early part
of the last century came from the US NAVY because the Navy wanted to "AMATEURS" out of the way and it was tough fight to get access after WW 1.
The next fight came from Ma Bell and ATT & ITT along with some foriegn countries monopolies over third party traffic which still exists in Communication Law to this day in the form of "Prohibited Communications" in Part 95 & 97. Without being longwinded, the Commercial Boys like Nextel et al (Latin for "and others") don't want cheap comms on the street
so guess who really runs things?

This is why the Ham hobby will die
> with its aging membership. There are fewer and fewer interested in the home
> build, hobbies aspect of radio. This is a plug and play society that is
> short on leisure time and less tolerant of old guard bureaucracy.

I would not say die, maybe change but until someone figures out how to
get the
international radio community to accept "Plug and Play", the test will
still
be with us.

>

I have standards, on the other hand, "ideals" are what each person makes
them
out to be. To the experienced "commercial radio ops" most of the talk
of Amplifiers, peaked up radios etc are somewhat silly since 27 MHz
propagation is somewhat limited by the Sunspot cycle (MUF-Maximum
Usuable
Frequency). Most Hams are born out the CB aspect of hobby radio and
wish to go to the next step. Very little offends me, I find it amuzing
as well as educational about the goings on in the radio world.

I ask the Amp users, freebanders and shoot out kings not to be offended
when they are asked to tone it down in the real world. I had a guy in
the nieghborhood who loved to shoot skip and had a 2KW setup so
the potential was there. He started causing some problems with the
cable company and the TV reception in the area and I spoke to him over
the fence about trying to "tone it down" and he told me he had it
"under control". Well, those pesky harmonics on the the "peaked radio"
coupled with the jack leg amp finally got him noticed by the Cable TV
CO which didn't waste time ratting him out to the FCC. His wife called
me at 4pm and asked me to come over as there was an emergency, it seems
the FCC was inspecting the Local Cable Co for leaks in the arcraft band
and they didn't waste time getting some attention off their operation
by dropping a dime. Needless to say, his wife set the ground rules
and told him the radios had to go! Voobner might not convince ya
but an angry wife does have some stoke (pun not intended).

> Treat it like X-rated radio.

I do, I keep it away from those who might hurt themselves.

Don't get me wrong you are correct propagation characteristic is the same
for each mode that is a given because after all it is frequency dependent,
such as the muf etc, My point is worldwide dx contacts are not "normally"
"hardly ever" if much at all common at 4 watts FM on 27 MHz, where as a cw
signal may be intelligible perhaps even the ssb signal as well. Can it be
done sure it can. But next time you have a ssb dx contact at say s-7 to s-9
or lower ask them to switch to am see if you can here them then try
switching to fm let me know what you here.

This is simply a reflection of the degradation of society in general. People have become less civil, less tolerant of the rights of others, more blatant in their actions, etc.

We didn't see people shoot each other over traffic altercations or sue each other over spilling hot coffee back then, either.

Bottom line: in today's morally-dead, junk society, CB radio simply follows the lowering of standards like everything else.

I just got one from Express yesterday and I'm really unhappy with it. When I received it the radio was WAY outa tune. Only thing it seems to pull in is CB channel 19, but even then the meter's not functioning correctly. I'd spend a little more on a better radio or at least make sure they peak and tune it. It's scared me away from the 3900. I'm sending it back.

Apparently the writer of that remark has never tried to operate an Alinco ham rig on FRS frequencies.

Transmitter and receiver performance is, shall we say, less than optimal..... (grin)

Hi Ken,
Ignore Boobner. I've seen his posts in browsing this group from Deja. He lives in a small world somewhere by
outdated rules that even the FCC realizes are unenforceable and frankly not worth the time or money to pursue.
I just received a Superstar3900 from Express and am rather unhappy with it. I didn't have them peak the radio for me,...just sent it with the export conversion. The meter isn't working properly and the unit is way out of spec. I didn't get a freq counter with it, but my several CBs of friends are pulling in signals where this one is silent.
I'm spending a bit more and going for a Magnum or a Ranger.
Just my 2 cents.....
Johnnie

Boobner lives in a fairy land of concerned FCC officials that pull over
truck drivers when they sniff out any stray RF that might not be licensed to
come out of an operators radio.
They know these things using their psychic powers by the way.... :-)

You're a class act, Mr. McCollum!

Thanks for the encouragement to Mark(& myself) I love BOTH radio "hobbies"(intended or not) and hope to pass the code and "smoke" the General exam. I do think he's(Mark) got something here...I just hope our fellow 11 meter enthusiasts don't view the 35 multiple guess(er, I mean choice) test as an intimidating factor. It is definitely a joke...and can be made a bigger joke on the poor ARRL official that browbeats 11m. Imagine receiving an e-mail stating that the sole purpose of obtaining one's Tech is to cast a vote against those with anti-11m ideals.(no need to let em' know that you enjoy ham radio too...omit that for maximum impact)

The test pool w/answers is available at numerous websites for download. The practice exams available on QRZ.com. I can't encourage others enough, a legal semi-hostile takeover(alright, a nudge) of the ARRL...BRAVO!!!

I totally forgot about anodizing. Because of the oxide layer, aluminum
doesn't plate or paint very well. It is usually treated with chromic
acid (or something similar) to change the oxide layer into something
that paint can stick to. I grind or sand all surfaces anyway, so that
usually isn't a problem.

>The second problem deals with connecting dissimilar metals, their

Also true. But the only real problem I have had with aluminum bodied
trucks is the rubber seal between the window bracket and the body.

At the age of 57 I have a lot of years left but my days of political battles are over. Chalk it up to the desire of men of my age to be 'useful' -- the Thomas the Tank Engine syndrome.

I am a little concerned that your motivations are a bit negative. If you are not to be a giant burnout case at some point you have to define yourself in terms of what you are rather than what you are not; the Further Adventures of Hostileman get to be a bit of a bore.

While there is considerable overlap of equipment, there is no real conflict between the two. The two services have separate and unique histories. Much like the Czechs and Slovaks, even given ethnic and linguistic identity, there is no particular reason to fight or for that matter cooperate more than two neighboring countries would. Separated by too many centuries of history.

At some point, CB needs to come to grips with at least these facts on the ground:

1. 1959 regs encourage ignoring them. Not a recipe for long-term success.

2. The trucking and transportation industries are not going to go away. Neither are Truck Stop Annies and Andrews.

3. Ancient Modulation is no way to build a service.

It is apparent that it is so far on the FCCs back burners, the cook needs binoculars. Like it or not any changes will have to come from the CBers themselves. Just how this bit of wonderment gets accomplished is an interesting problem. You have one solution which is only slightly better than nothing but as Patton put it, a good plan today is a lot better than a brilliant one tomorrow.

Go ye and sin some more.

Dick NBK, aging boy wonder.

>
> Ever hear of a Siltronix VFO? Quite the rage back in the 1970s.

A VFO connected to a 23 channel radio would be lucky to make it to 10 meters and still have any TX power or receiver sensitivity left. Those older radios were simply not made with the bandwidth necessary to operate over a wide range of channels.
In the days of the "Silly" VFO, you felt like a king if you could make it to 27.705, most radios started falling off after about 27.5 Mhz.

Modern 10 meter and "export" radios are designed (however poorly) to cover the wide range of channels that they cover, so it's no more difficult to run on 28.085, than it is to run on 27.085. So modern radios DO make it easier to spread further and further away from the legal 40 channels.

When a person tries to break a habit (Like smoking or eating) it is helpful to remove the offending habit from easy reach. If there are no cigarettes in the house, it's easier to avoid breaking down and lighting up. Same holds true for radios. If the radio you have can't go above 28 Mhz without a lot of work, it becomes easier to resist the temptation to operate there. If all you have to do if flip the knob, you will be more likely to venture further and further into illegal territory.

If the FCC somehow managed to remove all 10 meter and export radios from the market, how far would you go to get to 10 meters, if you were not licensed to be there? Would you spend a ton of money on mods to a "regular" CB to make it 10 meter capable, or would 50 or 60 "extra" freeband channels be enough?

Dave

Hey 257, Heard ya out there making a lot of noise in my radio this morning. Don't know if you heard it but someone was recording you and was playing it back for about 15 min straight. Haven't been on the radio mutch because we are in the middle of finishing our basement (Big mess) so all the radio gear had to be taken down. Is still up but it is just sitting on the table and bleeds through the TV's and phones something bad right now with nothing being grounded properly, so have to pick times when no one around here is watching tv or on the phone. LOL. Hope to be back up to normal here an a week or two. Did you ever get pics of your truck yet, You were saying that you were going to have a few pics a while back. How does that "55" look on that dodge? Oh well, Until next time.............

Sure is quiet in here with all these people in the kill file! I like it.

Later,

# 1682. Re: sidebanders - how well does Cobra Sound tracker work

Newsgroup: rec.radio.cb
Date: 2001-02-14 18:51:37 UTC
From: Sam <k4oc@juno.com>
Message-ID: <a4kl8tcibsr659e0iuiorte6dk1isik9n5@4ax.com>
Source record: 73263

I found the Soundtracker on Sideband to be lacking the attack speed it
needs. I find the DSP to be to slow and unable to pull out weak
signals. I do not use it. I have found that the Soundtracker works
pretty good on AM with room for improvement.
I still use the RF gain control and set it to the threshold of the
noisefloor and forget about the soundtracker. I think the DSP has a
long ways to go.
I have a $3000 HF Amateur Transceiver that has DSP and still use the
RF gain instead. Occasionally I will use the DSP on the HF Rig...of
course using it on Ham Bands only.
If I had it a chance to purchase another mobile CB again I would buy a
Uniden HR2510 and mod it for 11 meter. I have owned several of them
over the years and when they are properly setup it is the best bang
for the buck as far as mobile transceiver goes.
I also found the Cobra to be off frequency of SSB and will address
that later when I work on it on the bench. I also want to attach the
rit to the tx frequency so when I tune someone in on the rit I am on
their frequency.

Sam Cederas K4OC

P.S. I had an extra couple hundred bucks burning a hole in my pocket
and spent it on the Cobra. I now wish I had waited and purchased
something else like the Uniden HR2510.

Any value to a Lafayette Telsat - 23 CB? Have one here that belongs to someone. It needs repaired, which is why it was brought here. They are wanting to know if there is any value to it before or after repair, or if worth getting it repaired other than the fact it is a 23 channel? It has a mobile mount, mic and the Private Channel adapter. I've not yet bench tested it as to exact problems. Was told it does not receive. Physically, it is in fair to decent shape, except for one knob missing and needing cleaned up a bit. The mobile mount seems to be the worse part, it's a bit rusty. If someone is interested, I can send e-mail pictures. The owner is willing to listen to offers on it. I'm not much into collecting radios, so my input is a moot point. I will forward any replies to the owner. They do have e-mail but can't get into the news groups. Please e-mail directly (not in news group).

From: Hattl <hattl@gmx.net>
Message-ID: <96eo23$2h4t$1@news.space.net>
Source record: 73266

Hi!
I do have that rig, manufactured by Ranger Electronic Communications, Inc. (Taiwan, what else...). After a thunderstorm nearby (the aerial was not disconnected; obviously ESD) it happend, that it transmitts now even in RX mode continiously; actual tx frequency is correct (LCD), RF power can be regulated, but it seems not the full range as in TX mode. There is also a modulation - around 2.3 kHz. But TX works normally when PTT.

The S/N is 632088. Main PCB is marked EPT 295013Z, also KUOTIANG 2994 HB.

Now, my problem is that the schematic diagram (RCI-2950-1; drawed June 16, 1996; C.Y. Chen) I do have is not compatible. I was formerly employed at a domestic CB supplier who imported that rig - so I knew the maker personally, but they made a bancruptcy in 1997 and I can't ask them anymore for an actual drawing. I do have facilities and experiences to work on the rig, and tryed several things, but missing the schematics.

"Is there anybody outthere" (Pink Floyd) who could give me some hints or provide schematics?

Please mailto:jeromyjoshua@yahoo.com or this address.

Well said, Darren. My personal interests are technical, CW and QRP. That is what makes me a ham today, but who knows, my interests could change tomorrow. What makes the Amateur Radio Service GREAT is that we all are permitted to participate in our own way, but somehow, as a group, we meet the goals of the Service.

Gotta love it!

I believe that the answer to your question is 20 feet above the nearest structure. That means from the peak of the roof to the top of the antenna should be 20 feet. As long as your neighbors don't complain you can have it as tall as you want. I know several people that have mounted their antenna 80 feet up in a tree. This also helped disguise the antenna from fox hunters that wanted to find out exactly where said friends lived. All they could do was narrow it down to 3 or 4 houses. I personally had my antenna's base at about 37 feet which is optimum unless you want to take it all the way to approx. 70 feet. This put my antenna right at one wavelength above the ground which has proven to be the lowest height for maximum efficiency. It also keeps the cost of the tower or push-up pole at a minimum. Hope this helps.

Hi there,
I am selling a TRC-458,
Powers up but volume is really low?.....seems to transmitt as light
comes on.
Cosmetically it is in pretty good shape but I am not very handy with a
soldering iron or electronics so I will sell it for best offer?..
I can send you a picture of it if you like
Please e-mail me at the above for any questions
Thanks-Russ

# 1700. Re: sidebanders - how well does Cobra Sound tracker work

Newsgroup: rec.radio.cb
Date: 2001-02-15 01:26:20 UTC
From: Mad Dog <lgssl@netzero.net>
Message-ID: <96fbh1$kcldl$1@ID-20128.news.dfncis.de>
Source record: 73282

Cobra failed to mention to its prospective customers that the benefits of
the
Sound Tracker feature can only be realized when 2 different people are
communicating with their S.T. feature activated,
Otherwise it is totally useless for T/X work.
The problem with stability on SSB is due to their using a substandard
voltage regulator.
Unidens Dynamic Squelch Control is nothing more than a automatic squelch
circuit that you can build for most any radio.
I dont like the Sound Trackers, however the 29LTD and the 148GTL are
the smokin guns when it comes to potential.
Dont think i will replace the 2950 any time soon,but i am researching info
for a nice SSB rig to supplement its AM prowess.
The 2950 has such a powerful receiver and crystal clear transmit but lacks
in the Sideband department.

Yep.
I failed to pay in a timely manner and got himself arrested and hauled before a judge, who then ordered all wages garnisheed until such time as the fine was paid off....

Interesting point about this person, he hasn't been on the air more than a handful
of times since this, and has ceased any other activities regarding ham or CB operations.. Even some of his friends (like Howard Kingston et al) have also faded
from the ham and cb scenes without much in the way of fanfare.

It is unfortunately that such things do happen (for reasons only a well train psychologist may fathom), but they do. The best way found to deal with the problem has been to track down the offending party and make sure the law runs in course as expediently as possible.

I haven;'t been much on the old 11 meter band over the last 5 years.
I haven't heard from him at all in a very long time. looks like all the
old timers are fading into the sunset on us.

I might, at some future point, make an appearance down there, but
probably not until I'm secure in this new job I've acquired.

I still listen via shortwave radio on that band and haven't even heard
old harold (142) in there lately.

Guess the scene has changed.

I don't think HAM requires us to be upstanding citizens, just that we are
available for emergencies
and might possibly add a little international good will.
I suggest all upstanding citizens get in the slow lane and get out of my way
or I'll run you into a ditch
on the freeway. :)

I don't agree, Ch 26 has a good bunch of skip talkers on it, I have a blast from 3:30 to around 5:00 EST everyday on my way home from the mine, and the reason I gave the Ford away (to my church) was I no longer wanted the oil leaking in my driveway LOL I liked that truck! and I noticed the picture stayed on the page for a long time after I left "the camp" wonder why?

## 1711. Question? Pace sidetalk 1000M

Hattl,

Trace the ppt line to the board in the front corner.
You have a shorted transistor in the ptt/keying circuit.

When you locate the correct device and remove it the
receiver should work normally but the transmitter will
be inoperative until you replace the defective device.
It's a fairly common and simple, straightforward repair.
If you test for the appropriate operating voltages the
defective device is easily located.

NAO911/Jack

Hello,
A friend of mine is going to be going with a set of Maco M104C, 4- Element beam antennas. They will be stacked in the vertical position. The question I have is: the closer you get the antennas (9' being the closest), the rejection will be better??, and the farther you get (18' apart being the furthest), the gain will be better?? I may be wrong, but if you go with 12' apart, that would be the happy medium?? How about the coax?? RG11? Sure would like to make a coax harness instead of buying one.... How would I go about doing this?? I want to change out the stock gammas, and go with the 2600's, is this a big deal??

Hi Jack!
Thank you for reply. I tried this already, of course; it was also my first thought (I was working on R&D for CB rigs for many years; we got our rigs from Asia as usual).
The confusing is that in RX mode there is no TX symbol in the display (when press PTT it appears). I checked the CPU TX input - it is not "blocked" - that is the reason that the TX symbol doesn't appear. On the other hand the internal + 8.3 volts TX DC is always present, but I can't locate the source. So I checked against my schematic diagram and found out that it is not the actual one.
I don't know how familar you are with that rig - I am grateful for any hints!

If it sounds like I'm implying that people deliberately operate on 10 meters, it's because I believe it!

What you're suggesting is that many people are unaware of what they are doing or where they are operating. If that truly is the case, then my earlier point is even more valid. If a radio can be put on 10 meters simply through the twist of a knob (or band switch), then even an idiot can run there, and the proliferation of these "export" radios makes the problem worse. At least when you get your regular CB "modded" for extra channels, you know what they're there for. If you don't know about extra channels, you won't have them (Unless you bought a 2nd hand radio that was already modded).

If the majority of 10 meter bootleggers were there unintentionally, then they would most likely scurry away once they were informed of where they were, and the consequences of continual operation there. The fact that most defiantly remain there, tells me they know what they're doing and don't care about the consequences or the effects to the legal operators there.

Dave
"Sandbagger"

I think most DON"T remain there. I think most are errant or renegade truckers just passing on through. I do not believe there is an intentional ongoing problem.

The new MURS radios would probably be a good idea. Not sure what the regs
are over in the UK. CB Handhelds are kind of bulky. With CB you stand a
good chance of some clod with a high power base jamming your transmissions
for kicks. Not that the same thing couldn't happen on any other radio band.
Since the group is walking you should consider size and weight. Something
with cctss would be useful so the group doesn't have to listen to any
unwanted signals.

I would venture a guess that MOST don't know where they're operating...but some clearly do and don't care. I once heard a trucker, apparently responding to a ham who was asking him to vacate the frequency. His response went something like "%$#@ you, ya %#$#@# ham operator. I'll talk on my radio anywhere I %$@#@@ want to."

Group: rec.radio.cb Date: Thu, Feb 15, 2001, 4:19pm (EST+5) From: toomanyradios@aol.com (TooManyRadios)
In article <8132-3A8BED87-4@storefull-124.iap.bryant.webtv.net>, twistedhed@webtv.net writes:
The fact that most defiantly remain there, tells me they know what they're doing and don't care about the consequences or the effects to the legal operators there.

I would venture a guess that MOST don't know where they're operating...but some clearly do and don't care. I once heard a trucker, apparently responding to a ham who was asking him to vacate the frequency. His response went something like "%$#@ you, ya %#$#@# ham operator. I'll talk on my radio anywhere I %$@#@@ want to."

I don't know if it is your newserver or what, But I certainly did not write what your post attributes to me, that was written by "Dave" sandbagger, who I replied to. What I said, YOU confirmed, that MOST are not defiantly perched on the ten meter band, and those who you hear, are more than likely the renegade or errant trucker just passing through.

I'll wager a few duckies on the fact he'd be the first one to scream
when
he has his truck under impoundment, load siezed and shut down for that
type of S**T. I wonder how HB2346 got through both houses and signed
without a wimper. BTW-truckers aren't exempt, just have to have
probable cause such as actions above, can't just stop em due to
the fact of a radio aboard or during routine inspections at weigh
stations.

That's what it seemed you were implying.

> you made a point saying if there were no export or modifiable ham rigs
then
> there would bo no freebanders. i was just giving you a classic example
that
> your wrong,

That is one minor area I failed to mention, however the concern is here in the USA where I seriously doubt anybody home-brews a rig "just" to freeband on 11m. You mention home-brewed rigs in Russia, and some of the freebanders are Hams there, those rigs would still fall under the "modified Ham rig" label I used. I did not exclusively limit my comment to "commercially manufactured" rigs in the context of "modified Ham rig", if you didn't noticed.

> i implied nothing about russia. again your preaching on something
> youve heard and not something you know

All I have to do is go down the hallway to my coworker's office and ask him. He lived there for almost 40 years. That is 40 years more that you have knowledge of the country.

> just like you do with morse code.

Here's one for you Tim. Just because I have not passed a Morse Code test in no way implies I have no knowledge of it, or have not used it. It simply means I have not taken a test. 8-))

This Bill is actually intended to regulate cell phone antenna installations and other commercial antennas. But it is poorly written and could be used against CBers and ham operators. There has been an ammendment to the Bill to exclude ham operators. Go to Radio Shack and buy that little book called "Now You're Talking." Memorize the questions, take the test and Whammo -- you're a ham operator. Then they'll leave you alone.

Sec. 240.082.5 EXCLUSIONS: Nothing herein shall be construed to regulate, nor shall it regulate, antennas, antenna support structures, devices or facilities, installed, maintained and used exclusively for Amateur Radio communications by Amateur Radio operators licensed by the Federal Communications Commission.

Hatred will get you. Miserable people like that....what a waste of life. I am white FYI and black people are some of my best friends. I can talk shit with the best of them but what you said is pure ignorance of what life is about. It must suck staying mad like that. There is no life in anger and hatred.
I hear plenty of stupid white people on cb and ham radio so race has nothing to do with it. You choose to pick on a certain race and stereotype them.

Maybe someday you will wake up and smell the roses....maybe by then it will be too late while you are in your rest home suffering from old age wishing you had lived life different.

Sure. If you get the wrong cop on the wrong day, you'll be guilty until proven innocent. What's that you say? You have a ham exemption? Go tell it to the judge. Have fun taking time off work and incurring non-refundable expenses in order to clear your name.

I'd rather have them at home, running their 10KW base stations on Channel 6.

This is much preferrable to having them out holding up convenience stores,
stealing cars, or selling crack on the street corner.

That is fine getting rave revues. I am sure I get rave revues for
mine. I guess I am spoiled being a ham radio operator and knowing
what quality equipment sounds like.
Kind of hard to get on SSB when there are seven people on their all
sounding like they are on different frequencies and you not having any
way with a stock radio of having you RIT control move the TX frequency
when you move it to hear them correctly. You are not zero beated with
them properly. So many people just turn up the controls all the way
with out any regard to monitoring their tx audio and receive
characteristics on the proper service monitor.

Having an Amateur HF Transceiver that costs $3,000 with top of the
line filters and audio processing will really get one spoiled!
I plan on keeping my Cobra. I am now gathering information in order
to make the appropriate changes to my radio so that it will work like
one should. Granted for under $200 that is not a bad deal however
after spending some more money to modify some of the circuitry will
really make the radio a decent performer.

I guess the whole point of what I am trying to say is don't get too
sold on the rave revues you may be getting. I am sure you are happy
with your radio and I am glad for you ....I have to remember that we
are only talking about a CB radio that is not capable of performing to
the standards set down by the High End Amateur Transceivers.

By chance are you a ham radio operator? Just curious. If not have
you ever thought about taking the cb hobby one step further?
Take care.

Given that it is basically impossible (without a few tons of cash) to get more than two watts of audio with a four-watt carrier signal, any excess going toward generating crap, why would any sane human being want to clip the mod limiter? In fact a functioning limiter actually helps the peak to average ratio and communication punch.

Greetings!

Found this on www.spaceweather.com site,

Suns' Magnetic field has flipped.

You can view the document directly at the URL below...
http://science.msfc.nasa.gov/headlines/y2001/ast15feb_1.htm

What this means is the sunspot count, and the resulting propagation "quirks" at maxima, is now working down towards minima.

What this also may mean is an increase in aurora production. Since we now have an interplanetary magnetic field that works against our own Earths' magnetic field, Solar South versus aligned to Earth North. We may have some interesting displays in the next few years as the sun, still active but with a reversed magnetic field, interacts with the earths own Geomagnetic field in a reverse fashion as to what the past 11 years have brought.

The suns' own magnetic field has been aligned with the Earth's own, or Suns North [up] and Earths' North [up] have been the same for the past 11 years. What impact this may have on us? Well, we survived the past 500 million years [give or take a few billion] - don't see why we need to sell out and move to the Andromeda Galaxy just yet.

I'm telling you the above because of the greater increase to see auroral displays deals with the solar wind stream from the coronal holes, solar flares, and coronal mass-ejections as they pass by, and interact with, the Earth's Magnetosphere.

If such an event passes the solar debris towards earth, the winds' own field alignment plays a role in disturbances, both Geomagnetic and Radio wave. If the field is opposite to the earths own, a greater field disturbance can be produced generating Aurora along with the usual propagation events.

Don't call the police just yet, this stuff happens every 11 years, and is part of the sunspot cycles' annual events. [see: Hot Sheet]

I'm hoping to be able to view some good auroral displays with greater frequency with this news.

I just hope the sky clears soon so I can see some Aurora, it's been boring up here in Gawds Country Mitten. Cloudy skies when the Auroras out bumms me out...:-(

Regards!

Just another example of your government's incremental regulation of every aspect of your lives, from cradle-to-grave.

I agree. It also encourages illegal operators. I look at it this way, if the code enforcement jerk-offs take it too far, you go fiberglass inside or wire-in-the-attic. If I am FORCED indoors, through none of my own actions, I would get my ticket, make my home on ten meters, buy the biggest, dirtiest, filthiest, bleeding-pig-of-a-base-amp I could possibly find, then go around to all my neighbors (who I know well) who I have never had a problem with, hand them a copy of the new rules explaining my antenna system, that caused no bleedover, is now illegal, and I am reduced to using subpar antennas and that it is only because I am following the letter of the law.

Greetings!

When they get returns due to lack of performance. I would think that
would be far more costly to them, then to leave them alone and let the
owner decide.

The tuning issue may be why they're selling out the shipment that made
it into the US. Poor quality control on parts - hence the deal.

Price for it may go up once the lot is gone and the factory has got
their act together.

TMR,
Question.

If a person is cited incorrectly, or a law is misused to creat a
citation, would that person not have recourse to recover expenses due to
fact that he was not guilty of violating the law as written? Just ask-
ing.

Jerry

Yeah It sure was good to hear you again 459.Your radio was hitting on
all 8 my friend.
Did I hear the recoding of me being played on the air?He he he?For
fifteeen minutes???? Try this 459.......Someone has been recording me
and playing me back for ..........are you ready....Over 3 months!For at
least 5 or 6 hours a day! No joking,After the first two weeks it was
pissing me off,but now I'm starting to like it.I always know how my
radio sounds!!!
Sorry about not E-mailing you a picture of the truck with the 55 mounted
on the roof I'll send it out probably tonight.Catch you on the air my
friend.
459 wrote;
Hey 257, Heard ya out there making a lot of noise in my radio this
morning. Don't know if you heard it but someone was recording you and
was playing it back for about 15 min straight. Haven't been on the radio
mutch because we are in the middle of finishing our basement (Big mess)
so all the radio gear had to be taken down. Is still up but it is just
sitting on the table and bleeds through the TV's and phones something
bad right now with nothing being grounded properly, so have to pick
times when no one around here is watching tv or on the phone. LOL. Hope
to be back up to normal here an a week or two. Did you ever get pics of
your truck yet, You were saying that you were going to have a few pics a
while back. How does that "55" look on that dodge? Oh well, Until next
time.............
257 NH. On the wheels

Now I'm wondering how many times I had conditions and thought I didn't
because I was maybe calling to a tape? Haha! But you got through today
and it was REAL tough on this end!

Greetings!

This info is for USA only...

As far as what the FCC wants you to follow, 20 feet above any
structure the antenna is mounted on, or 60 feet above the ground level
on average terrain.

The second part, if you're one of the lucky ones using ground based
masted/tower/tiered antenna, the "Average level" of the terrain can
give you a leniency on how high you can have the antenna.

If you're living on a hill side - and the berm/bank of the property is
at a higher elevation than your home, you can mount the antenna higher
than 60 feet as specified. Because you're average terrain height for
the property is different.

As far as the finer points, some interpret the FCC rules to say that
the antenna tip cannot be higher than 20 feet above the structure, or
60 feet to the tip from the ground, but not too many people push this
issue either.

It really all depends on what your neighbors can tolerate.

I'd say, go for height and get it over with.

# 1771. BIG FAT LINEAR FOR 11 METERS QUESTION

Newsgroup: rec.radio.cb
Date: 2001-02-16 01:02:46 UTC
From: Dodge <gtx70@home.com>
Message-ID: <3A8CA56B.A947A913@home.com>
Source record: 73502

Its using 40 3-500Z tubes. Tuned specifically to 11 meters only. It works best when using an "Export Radio" {pun intended} or Ham rig with 11 meters. Make sure any and all mod limiters and filters are removed or clipped!
Now for the question. Is this illegal in any way? Mr. Aaron H Boobner can you tell me? If not please report this immediately. Waste no time as this "Dillinger" of the 11 meter band must be stopped at all cost. Just think of the danger an illegal 11 meter operator creates. I mean woman and children are at stake here! It doesn't matter the amount of lives it will take to stop me. I MUST BE STOPPED before I power this monster up and cause a power grid failure!

BOOBNER, Please respond IMMEDIATELY!

# 1772. Re: A new twist? JOIN THE ARRL!

Newsgroup: rec.radio.cb
Date: 2001-02-16 01:18:50 UTC
From: Mike Yetsko <joe@user.com>
Message-ID: <t8p0bt69il6h33@corp.supernews.com>
Source record: 73504

Hi Mark,

Well, first off, I applaud your efforts. And personally I think joining the ARRL is a good thing. Although not for the same reasons you expound.

Joining the ARRL will expose CBers to a much bigger picture. Will it be the picture that will tempt them to get that HAM ticket? Maybe, maybe not. Even if it does, I know PLENTY of HAMs who are STILL CBers. But it does sort of limit the rule-bending some...

And there are always PLENTY of 'items' in HAM radio that while not entirely legal, can be easily adapted to CB. Construction articles on audio interfaces. Test equipment. Antennas. Heck, I'm surprised no CBer have tried to take a 'warbler' and run it on one of the old class D control channels. (Oh oh, did I open a can of worms there?)

In any case, the ARRL would be good exposure. No matter what the original intent was.

But I don't really think you'd change the ARRL.

As to the 150 mile rule... HF is restricted and controlled by international treaty, as has been mentioned before. One of the things that 'allows' CB is the fact that it was 'declared' to be a close range 'internal' service. Now, we ALL know what happens during a sunspot cycle, but as long as that's 'declared' to be 150 mi, there's sort of an illusion of being 'local' and withing boundaries. Is this really the reason CB is restricted? I couldn't tell you. But I DO feel that if the limit were removed today, someone would scream about it.

Is that limit ever enforced? I have NEVER heard of anyone being busted or even cited for 'just' that. It's usually the 'big guns' issue. Guys with cans and kickers.

How much power do you need? Well, I worked a 25 minute converstation 3-way from my car on the way to work using my HTX-100 to a RS Deluxe CB Mag Mount. The other two stations were East Germany and Moscow. And I kept the power to 5W PEP for all but the last 30 seconds when I signed off.

And years ago, about 1979 or so, I worked a friend in Lubbock Texas one day from my car in PA on the CB

(SSB) but otherwise legal.

Now I run a radio called a K2. It's MAX is about 12w
PEP on SSB, and I talk all over the place. (You can see
the radio at www.elecraft.com if you want to.)

The key I figure is to have fun, whatever it's at. Don't let
the confrontational lids like some of the HAMs that come
in here just to be an ass set the mood. (You probably
know who I'm referring too. He was on the HAM forums
blathering "Hey Guys! Check out the stink in the CB
forum!" ) Just remember HAM radio, as well as almost
any other social group, is a cross section of society. And
you get @ssholes everywhere!

Bottom line? Do what's fun. And that means fun for YOU!

Mike N1DVJ

There is an "intentional ongoing problem" as long as some truckers consider
28.085 to be a "company channel".

It's a problem that will go away eventually. But it's taking a lot of work.....

We have 3 that work for us directly, one Ph.D., one Electrical Engineer, and one Mechanical Engineer. The gentlemen with the Ph.D. is a friend of mine, who works in the same department here as I do, so I speak with him often, and from time to time his son, when I visit him at home. His son, he's 18 and a university student by the way, got back from a few weeks vacation in Russia a few months back. I hear the same story from him. The few who have money are doing fine, the rest are just scraping by. I have also spoken to their friends, who are Russian too, at several of their parties. The general reality for most Russians is not that good.

We also have a deal with a university in Russia where they do custom programming work for us in the area of finite element analysis for electromagnetic fields coupled with thermal finite element analysis. This results in a number of "visitors" from Russia stopping in to speak with our resident Ph.D., who is checking the results of their work for accuracy. So I have had a fair number of Russians to speak too. What you failed to realize is the "tourists" you spoke to are at the top of the pecking order, the ones with money. The people without money are not buying plane tickets on their own to come here as "tourists" I can a sure you.

Message-ID: <B5bj6.515$iH2.47040@newsread1.prod.itd.earthlink.net>
Source record: 73540

It's not like I would be arrested for having a tower. Get real! This bill allows local municipalities to regulate, ie require a permit, before erecting a tower. It won't allow a cop to arrest me or write me a ticket if he's driving down the street and sees my antennas.

And yes, all I would have to do is show proof of license and the regulation would not apply to me. No court date, no ticket, no nothing but maybe a 34 cent stamp.

Oh come on, grow up people! This isn't going to make it illegal to have an antenna on your house. The most you'll have to do is apply for a permit and MAYBE fork out a few bucks. If you refuse to follow the regulation then your antenna will be illegal. This bill doesn't REQUIRE local municipalities to pass the regulations it only allows them to do so.

Yep, Leland, you're probably right about that, most of the Russkies that come here are at the top of their countrys' financial pecking order, same as most Americans vacationing in Russia are at the top of the American financial pecking order. So you have indeed been exposed to their culture, have you noticed how impressionable they are? I mean, with enough cash, you can compromise even the wealthiest of Russkies.

Generally what will happen is this:

Your city or county passes the regulation requiring a permit for your tower. It posts the new rules in the news paper and at the court house. Yes it is YOUR responsibility to "discover" the new law. A local enforcement official will probably see your antenna and will send you a notice that your antenna is in violation of regulation blah blah blah.... You will have a certain number of days to respond with either a permit application or evidence that you are exempt. Unless your county/city government is populated by total idiots you won't receive an arrest warrant for having a tower unless you choose to ignore all the warnings.

I RESEMBLE THAT REMARK!

I very wise black man once to me a short story about so called "people of color."

He said, about "white" people:

When you're born you are pink.
When you're angry you are red.
When you're sick you are green.
When you're scared you are yellow.
When you die you are purple...

When I was born I was black.
When I am angry I am black.
When I am sick I am black.
When I am scared I am black.
When I die I'll still be black...

and you call me "colored?"
A black man may save your life some day.

That's true, even with Americans too. 8-)) When my friend's son went there for vacation he rented an apartment with a couple of his old friends there. Stuff went on there that even his dad doesn't know about yet. I don't even know the details. He told the other guy, the Russian Electrical Engineer, what happened because he's really cool about things, and knows how to keep his mouth shut, mostly.

Hi,
Does anyone out there have any info on President Jackson
modifications? I recently bought a broken one, had it fixed
by replacing the MRF477 with an MRF497, but it still
puts out stock power levels. Any suggestions how to
increase the output without risking my new $40
output transistor? Thanks in advance, JD

Greetings!

I was playing around with the "About" under the "Help" in the IE explorer - came across a rather unusual if not funny [to some] easter Egg that gives you an interesting perspective on the making of Win 98.

Heres how to do it...

In your Browser, you can do this offline, click on "Help" and next pop up click on "About" and it will open a separate window with the animated E and the globe zooming into the picture.

Hold down the Ctrl key and right click the E and drag the E following the dark line drawn on the screen to the globe, across it, and it, the "E" will start to disappear - the "Header" will slide off and reveal an "Unlock" button, click on it, the globe will start jumping and bumping about, Hold Ctrl and right click and drag the E to the globe.

It will then "zoom in" and reveal the blue E - maximize this window and watch the credits. It's a cheap thrill.

Regards!
:+> Andy <+:

There is a classic story about our occupation of the Philippines in 1899. Seems that the army that had initially occupied the place was a bunch of national guard and volunteer units whose mommies and congressmen wanted them home. Time for the Regular Army in the persons of the 9th Cavalry, an all-black unit that more than likely chased the Rough Riders up San Juan Hill at bayonet point.

Coming down the gangplank in Manila, a bystander shouted, "What are you niggers doing here?" to which a non-com answered, "We are taking on the white man's burden, what else."

Heh ... now all I need is to find a real use for the 40 WPM :)
Seriously, I'd like to know how the blazes one gets the sound working in windows. Finally am getting a chance to write some code in Visual Basic, but haven't seen any info on playing anything (other than wav files or videos). I've got to buy some stuff to try on the PC, but I'm not making the bucks like I used to. The serious versions of anything from Microsoft will set you back a substantial sum, and I'd buy a rig before I'll lay out the best part of a kilobuck for software. I've just been using a PC at work for the Visual Basic stuff, and, as I said, am working on a project. No time to try and find the stuff that I don't need for the project. Sigh ... I'd love to revisit a program I first wrote around 1993 - one could receive morse and one could send it - using basic, up to 70 plus words per minute (on an OLD 4.77 MHz PC). I'd love to get muckin around to decode TTY and PSK 31. It's fun when you can do it yourself (kinda like building a radio, except you don't zorch expensive components, and your wife doesn't raise heck 'cause you burned a hole in a tablecloth with solder!)

Fraid I have to agree with Maddog. A lot of us have developed a pile of message rules that pretty well remove this sort of crud. Having it repeated back -- a mistake in itself -- is offensive. On some groups I will killfile a repeater in self-defense but with this bunch of large-mouth bass, it would annihilate the newsgroup.

Think of it as sort of a 'pooper scooper' courtesy to your fellow man.

Dick

## 1853. Something Old....something new.

Newsgroup: rec.radio.cb
Date: 2001-02-17 04:38:03 UTC
From: Jerry Oxendine <joxendi@bellsouth.net>
Message-ID: <3A8E002B.536F@bellsouth.net>
Source record: 73584

Just a topic to get things more onto radio and related subjects. Every now and then, someone asks a question about ignition/electrical interference. One frequent problem mentioned is the Ford fuel pump..probably THE most frequent source of noise. Some of you have perhaps seen me reply that the GM vehicles *seem* to generate less trouble in this area.

I have a '93 Lumina Z34 that I resisted putting an HF radio in because I didn't want to "spoil" it with antennas. I finally got to the point I just couldn't resist any longer! Trips to visit my daughter got lonesome with nothing but the FM stereo, and I couldn't keep up with the cops with THAT! LOL! So, this week I bit the bullet and installed an Icom 706 MIIG, the latest version of their "mini" radio. I had to promise my 14 y/o I wouldn't "booger" it up too much. So I chose a less obtrusive all band HF antenna than I normally use, carefully chased all the wiring under the drip channel--likened to NEVER found a pass thru the firewall--installed the control head centered over the console. Then I did basic grounding, hid all my wires up inside the dash and ended up with a pretty good looking installation, if I do say so. I was worried about interference to the ECM and/or electrical noise from the engine. But when I cranked the engine, the receiver was quiet as a mouse---- absolutely NO extraneous noise whatever AND no effects to the engine when transmitting a basic 100 watt signal. The alternator is already a 110 amp so no worries about pulling down the battery. I don't *much* like the antenna, but I have gotten better results than I expected. Basically up on 10 meters (or listening to 11), it is a steel whip. For lower bands, the whip is loosened and pulled out of a base loading coil to make it longer. Uh, yeah, I know about base vs center/top loading. But, I have to "compromise" with my family and I promised not to put a huge UGLY antenna on the car--I've got the station wagon for that! At least when I go on a road trip with the Z34, I won't be lonely.

My point is two things: One is that the results of this install seems to bear out what I've believed for many years; not to get into an argument about cars, but I have always had better luck installing radios in GM vehicles instead of Fords. But the WORST car I ever had was a Plymouth Valiant. Even doing many hours of noise troubleshooting/grounding, I never did get all the noise out. I got it out of the last Ford I owned, but it took a LOT of hours. The last reason for posting this was to, hopefully, prompt others to tell us about your installs, the good, the bad, the troubles you had and how you solved them. From that, we all might learn something that will help us with our next install.

73

Jerry

I recommend going thru www.ynnmail.com. It`s a free newsreader that allows
you to access ANY newsgroup (Including those banned by most ISP`s) and you
can post mesages and then it allows you to type in whatever Return e-mail
address and ISP you choose

More likely that the black man will take your life from you someday. Need to look at the official crime statistics from the FBI. It is well known that blacks by rate commit more crimes than any other race. Not to mention especially rapes, murders, and other criminal activity. Also, blacks are much more prone to be involved in nefarious activities. Also, look at the exploding crime rate in South Africa. Apartheid hasn't existed for 10 years and the crime rate has exploded. You are likely to be murdered for 20 dollars there. Or how about the smash and grabs that they do with cars.This is where they smash the windows and then pull the driver out of the car. Not to mention all of the other things. Yep, its possible that the black man will save your life but really it is statiscally insignificant compared to what else they might do.

I once solved a severe case by using RG-8 (stranded center!) for the power lead. The cable was run straight from the battery to the radio. Shield was ground. Center was positive/hot.

Fuse BOTH leads at the battery, but keep the exposed wires short.

I have a '99 Jeep Wrangler and would like to mount my CB. I am looking for
an easy way to remove it at night, due to the fact that I leave it unlocked,
to avoid
some mental midget tearing up my soft top to get in. It's a Cobra 148GTL -
is there any slide in chassis that Y'all are aware of I can buy?
Also what's the best antenna (mount wise) to purchase?
Thanks!
Alan

Greetings!

Have two fronts on this.

One a Chevy Tracker, the one I have did have a very problematic noise from the fuel pump.

After some investigation, the coating they use to resist road salts and prevent rust, makes the tank a large insulated capacitor.

One day, I had to bring in the truck for service, and asked about grounding the gas tank, if and how it was done.

As a side benefit to knowing the "boys" in the shop, they simply depressurized and drained the tank, unbolted it and looked for trouble. None found. Only thing; there is a pigtail lead that goes to ground at a frame crossmember - check this to be sure it's cleaned up and re-tightened or at least checked, on any of your vehicles. This ground pigtail also applies ground to other sensors for fuel pressure and a crowbar reset point for the fuel pump if the ECM senses excessive fuel pump running pressure time at idle - bringing on the check engine light which can be cleared thru the ECM diagnostic harness or thru disconnection and discharge of the ECM memory caps once the leak has been found and fixed - then restoring power to clear the CMOS trouble code memory.

Reassembled the mess, and changed the fuel filter - and gave the kids $40.00 for themselves and pizza. Hardly any noise now. Was 3 S-units that would drop down to 1 S-unit on rainy day or on a snow-packed road.

On a Ford, they had an emission recall - a Ford Aspire that the vapor return hose could rub against some parts and leak vapor causing a potential for explosion or fire.

They did pretty much the same thing as the Chevy, depressurized, drained and dropped the tank, replace a hose with a stainless steel one for a short run, and reassembled. This type of work took care of the noise. They did have to remove the "cap" that houses the fuel pump and float sender. The tank itself is heavily coated with rust preventative, I did notice the cap and ring tabs bite into the metal of the tank to hold it in place and provide a seal. I think the removal and replacement did the trick to provide some ground and shielding on the Aspire.

My thoughts? The corrosion protection on a lot of todays vehicles is a major contributor to poor RF shielding. May look good to DC grounds,

but are you sure you can trust the joint for the long haul? It can get expensive if you neglect this type of problem. But, you really have to have a reason for someone to do it, otherwise it would be more cost effective and less dangerous if you let the professionals do the work versus yourself - or leave it alone to let mother nature do it's work and the joint itself fails or corrodes to fall under warranty if it can apply.

As far as engine noises, the simplest and easiest way to take care of a lot of noise is to replace the "bullet" connectors they use to attach ground to the firewall or other type of chassis ground connection points with braided strapping. Use a length that is close to the pigtail lengths used, and get rid of the set-screw/sheetmetal connector and use a bolt with a star washer to bite the metal under the paint - the engine block side uses the bolt that held the other side of the pigtail. A nice benefit of this is in the event of a ground cable failure, you still have a return to the battery from the frame connection point off another part of the firewall.

Just some thoughts...

On Fri, 16 Feb 2001 23:38:03 -0500, while the modem was ice fishing with the Mouse, Jerry Oxendine <joxendi@bellsouth.net> dissertated the following:

:+> My point is two things: One is that the results of this install seems
:+> to bear out what I've believed for many years; not to get into an argu-
:+> ment about cars, but I have always had better luck installing radios

Don't lock your Jeep (or any convertible), if you like your top. I use forklift battery disconnects on my radio. One coax and one power connection comes off easy and just take it with you. Mine is on the floor behind the E-brake. The 7 foot Firestik is on the bumper. I enlarged one of the existing holes left after I removed the endcaps. Used an RS 21-961 mount. The fuel pump and the injectors are RF generators, just so you know.

Sometimes, they get a "surprise" when they do this. A 9mm Glock, loaded and
strategically placed on the front seat, will do wonders in stopping these sort
of attackers.

Now come a most important question..... Are "U" suggesting that we trim a little off the U S Constitution? That's the only way "U" will achieve your goal. Frankly I am opposed to any thought of that.

Citizens rights are being taken on a daily basis just because someone doesn't agree with someone else.

Live with it or move out.

Just as we respect your rights to disagree with the subject you need to respect our rights to express ours.

Respect is the name of the program.

Don't you think you're being a little intolerant? Homosexuals are people, too. I'm sure that as a youth, you experimented a bit with the same sex, as I did. As all CBers did. Nothing wrong with a little gay action once in a while, especially at keydowns, he heh.

Alan i have pondered the same question many times over.
Thought about using a quick release slide mount like the one they make for
car
stereos.
The only part i dont have figured out is the coax connection into the back
of radio.
Back to the drawing board..........

Hello Mad Dog:

I believe that the improved A99 is in the wake of the manufacturing and upgrade effort of the I-Max 2000.

The manufacturing and upgrade Solarcon did to the I-Max 2000 to improve the mechanical strength, was carried over to the A99, which makes sense to have the least amount of parts needed to manufacture both the A99 and I-Max 2000 antennas. Why not have the A99 upgraded, its a very popular antenna.

I do not believe they have changed the impedance matching device. The method of mounting the vertical element, and impedance matching device will make or break a vertical antenna, take this one to the bank.

Jay in the Mojave

Hey man don't worry about what others think about you being on other frequencies other than Ham. I too am a ham and have been licensed for 12 years. I have found there to be A LOT of hippocrites on the ham bands. Watch the ones who talk badly about getting on cb and eventually you will find that either they still talk on it or they came from CB.
Life is too short to not do what you want too!!!
Take care.

# 1895. Cobra 148NWST

Newsgroup: rec.radio.cb
Date: 2001-02-17 22:25:22 UTC
From: Sam <k4oc@juno.com>
Message-ID: <54ut8tch41815866irkr61gnrlbn65l4k2@4ax.com>
Source record: 73426

I recently purchased a Cobra 148NWST. Two weeks ago
in fact. I had increasingly become dissapointed in the radio because
I felt is was not performing correctly. Well yesterday I took a road
trip 90 miles to the coast to Wilmington, N.C. When I was in
Wilmington I decided to get on the cb and see what was going on.
To my surprise I noticed that I had no receive at all. I checked the
antenna out and it checked fine with a multimeter.
I drove home and put the radio on the bench to see that not only did I
not have any receive but I also did not have ANY rf output.

I took the radio back to T/A where I bought it and they gave me
another brand new one. The new radio works like it is supposed to.
I measured the am carrier to be 5 watts. I turned the carrier down
to 4 watts and then checked the modulation level. THe modulation
level was excellent....95% right where I like it. So now I am
pleased with the radio. I still plan on upgrading some of the
components sometime.
-Sam

## 1896. New & Improved A99????

Newsgroup: rec.radio.cb
Date: 2001-02-17 22:27:49 UTC
From: Mad Dog <lgssl@netzero.net>
Message-ID: <96mtvu$lmkdj$1@ID-20128.news.dfncis.de>
Source record: 73424

Has anyone else seen the new & improved version of the A99 that Copper Electronics is advertising?
What's new & improved about it?
Did they possibly change the Impedance matching device, or maybe they made it just a touch longer (which it needed)....
Thanx for your input.

Hello Mad Dog:

Just finished putting the Interceptor Ten Thousand together, and measured the stray capactance, which is pure loss! The Mastodon measured about 78 pF and the I10K was hard to get a dead nuts capacatance measurement, due to it being so low, but I finnialy got one. Its figures on paper to be 1 to 2 dB less loss than the M5K. We will see what happens when the antenna field strength comparison tests are done.

Looking for an old, crystal-type Robyn scanner, model "Robyn 3-bander"in
non-working condition for parts only.It is the one with the 16 tiny red
incandescent channel indicator lights and the 3 colored "band" lights.Needed
for parts only so need not work but should be electronically complete.
Will buy yours outright or, have lots of scanner PARTS (both for xtal AND
programmable scanners) that might be arranged for a TRADE.
Please contact me DIRECTLY at KLARRG@AOL.COM if you have one to make
necessary arrangements.

Thank You ! Klarrg@aol.com (LarryW.)

Hres a mod for you neighbor,
Remove C35(.047uf) and C16(.01uf) then locate the Red & Yellow wires
which are on Pins #3 and #5 of the connector for the channel selector,
connect these wires together and youre done.
(You may be a trucker if the power supply for your CB burns diesel fuel)

George,

Here are some websites about the proposed National Museum of
Broadcasting on the Frank Conrad home site. The first one is the article
about the funding problems and the others are about the project.

Source record: 73457

Well, I should've said *most* of the noise. I grounded the hood and
trunk on both sides to the body. Ran ALL power wires direct to battery.
Grounded mufflers to the frame. Put metal screen wire inside the tail
light lenses. Shielded the power wires and re-routed them several
times. Grounded the radio to body (unit construction). Grounded the
front and rear suspension clips to body. Bunch of other stuff I tried,
too. Never got *all* the noise out. The best thing I did was to get
rid of the Ford! LOL!

## 1928. Midland 79-290 split mount

Newsgroup: rec.radio.cb
Date: 2001-02-18 05:09:26 UTC
From: Any User <au69@aol.com>
Message-ID: <k2mu8t8asmvg68pgp9rsdeha7h91alsepf@4ax.com>
Source record: 73459

Has anyone seen (or made) a conversion cable for the Midland 79-290 to allow the front pannel to work away from the radio? I have a tight install on a new vehicle and "split-mounting" the radio would make the install a LOT easier.

Hello Handy Andy: Yes very funny, We all thought that the center punch could go thru the gas tank and raise real havoc. This is indeed a great photo, its in many of the older CB books.

But the cyclinler head..... Yeah probably.... Look at the punch! It looks like the center punch was once a alignment tool that someone grinded down the tip for what they wanted.

Can you imagine using this tool to locate a hole on the newer cars!

Sounds easy enough to build, start with a harness containing the appropiate number of color-coded circuits,
make it long enough to reach from the control panel to the radio and start soldering.
If it has a microswitch mounted on the radio that indicates when the control panel
is installed you can either bypass the circuit or superglue a small plastic tip into
the hole deep enough to activate the switch.
I built a similar harness for a car stereo over 2 years ago that worked beautiful.

I agree totally. This garbage of setting the majority on the rights of the minority has gone too far. Look how demonized an SUV owner is. And anyone who dares talk on a cell phone while driving. It's more aceptable to drink beer at 65 mph then use a cell phone in an SUV.
Only make sure it BLEED all over the 900 mhz cordless phones:)

Glad to hear it. I'm always happy to hear about any gas-state
electronic device that gets it's second wind.

BTW, if the filter caps don't need replacing, leave them alone. And
for future reference, pins and other contacts can be cleaned very well
with just the eraser on the end of a pencil -- it will do the job and
is much less abrasive than steel wool.

Sparky, FLRC

Do you have a copy of a schematic for this radio? IF so are you able
to scan it for email? I second the other question...what the heck r u
talking about in the mod below?
Thanks.

Here I am sitting on this barstool talking like a damn fool I've got the twelve
o' clock news blues And I've given up hope for the afternoon soaps and a
bottle of cold brew is it any wonder I'm not crazy Is it any wonder I'm sane
at all
Well I'm so tired of losing
I've got nothing to do and all day to do it Well I'd go out cruising but
I've no place to go and all night to get there
Is it any wonder I'm not a criminal
Is it any wonder I'm not in jail
Is it any wonder I've got too much time on my hands
It's ticking away with my sanity
I've got too much time on my hands
It's hard to believe such a calamity
I've got too much time on my hands
and it's ticking away
ticking away from me
Well I'm a jet fuel genius
I can solve the world's problems
without even trying
I've got dozens of friends and the fun never ends
that is as long as I'm buying
Is it any wonder
I'm not the president
Is it any wonder
I'm null and void
Is it any wonder I've got too much time on my hands?

Hi everyone,

I had a great time last night at a place here in Galveston called the Pink Muffin. I met several guys from the Lambda ham radio organization and we did the town together. I never realized what a burden concealing my homosexuality was until I came out yesterday. What a relief!

Many thanks to those who have rallied to my support, and to those who have indicated the desire to date. If you are interested, look up my Yahoo personal ad. I am the ad poster "seekingintx".

Sincerely,

www.kp82.com

LOL!

It's nice to stick a radio in a vehicle, do just the "normal" grounding
and install tricks and start talking! Hunting noise sources is very
tiring and aggravating! I don't have to do with "most" GM vehicles.

Subject: Little Johnny

Here we go again!

The teacher says, "Whoever answers the questions I ask first and
correctly can
leave early today."

Little Johnny says to himself, "Good, I want to get outta here.
I'm clever - that answer's mine!"

The teacher asked, "Who said `Four Score and Seven Years Ago?
Before Johnny could open his mouth, Susie said, "Abraham Lincoln," The
teacher
said, "That's right, Susie, you can go." Johnny was mad. Susie had
answered
first. The teacher asked, "Who said, `I Have a Dream?" Before Johnny
could
open his mouth, Mary said, "Martin Luther King." The teacher said,
"That's
right, Mary, you can go."

Johnny was even madder than before. Mary had answered first.
The teacher asked, "Who said `Ask not, what your country can do
for you?" Before Johnny could open his mouth, Nancy said, "John
Kennedy".
The teacher said, "Thats right, Nancy, you can go." Johnny was
fuming. Nancy had answered first.

As the teacher sat down, Johnny muttered, "I wish these bitches
had kept their mouths shut." The shocked teacher asked, "Who said
that?"
Johnny jumped up and hollered, "Bill Clinton!!! See you Monday!"

One morning Dweebofag called 1mangayboy and said, "Please come over to my mommy and daddies house so I eat your dick, drink your jizz, and you can help me figure out this jigsaw puzzle.
It's awesome, but I can't figure out how to start it". 1mangayboy asked, "What is it a puzzle of?" Dweebofag said, "From the picture on the box, it's a tiger." 1mangayboy figures that she's pretty good at puzzles, so she packs up her KY jelly and heads on over Dweebo's parent's house, where little Dimmy Dweebofag will be living 'til they die, to have gay sex and chat about the mean hammies they envy so much.
Dweebo lets her friend in the door and shows her where she has the puzzle spread all over the table. 1mangayboy begins stroking Dweebofag's nuts as she studies the puzzle pieces for a moment, then studies the box, and then she looks at the pieces again for a bit. 1mangayboy then turns to the Dweebofag and says, "First, no matter what I do, I'm not going to be able to show you how to assemble these pieces to look like the picture of that tiger. Second, I'd advise you to relax, have a suck or two of my jizz, grease up your asshole so I can fuck it, and put all these Frosted Flakes back in the box."

Hi There Fellow ILLEGAL FAGGOT KEYCLOWNS!

Hi. I'm Kindapeterpupper82 Tim From Galveston County Texas. I'm 20 Years Old Now And Have Been Using my cock sucking abilities to make money for ILLEGAL FAGGOT KEYCLOWN toys Since 1992. I Got My FAGGOT Start With My Dad In His PickupTruck. I Was About 11 At The Time And Really Liked What I sucked. Around A Year Later Is When I Found a veteran ILLEGAL FAGGOT KEYCLOWN named 1mangayboy who pimped me Cheap And Used me As A Base to make money for his linears. Along With A Firestick Antenna that he used to whip may ass when I wouldn't blow everone at the keydown competition, he Mounted me many times in The Gutter. Needless To Say This Didnt give me a lot of time to suck the cocks I wanted to suck, And I Was Happy To Get Out and suck off at Least 5 miles of ILLEGAL FAGGOT KEYCLOWNS standing in a single file line everyday.

The Summer Of 93 I Worked A Part Time Job At My Grandfathers Vacuum as a vacuum sucker for granpaw and his CHICKENHAWK buddies, To Save Up The Money To Buy my way out of suck slavery to 1mangayboy And A Few Other Things. This job Was One Of The Earliest Models for how I conduct my life And I have Alot Of Qwerky Tendencies now because my dad and granpaw made me suck their cocks. But I Never Noticed A Bit Back Then Because I Was Young AndThrilled To Be sucking on a cock and planning to suck more of 'em All Over The World.

Back Then The Craze Of ILLEGAL FAGGOT KEYCLOWNS sucking the cocks of every member of All The DX Groups Was Not Going Yet And I sucked off every member in Only A Few Big Time Groups. It Was AnalTweakers, WeenieWashers, Kindapeterpupper(usa), RimmingCocksukkahs, and SlideNAsses That I deep throated The Most Often. It Wasnt Till Later On Dino Brought Out his dick and I sucked off the SpermDrippers With All The blowjobs Going At The Same Time. Alot of Groups Seen How Succesfull I Was At Recruiting Members to let me suck their dicks With All These Activations And Others Soon Followed Suit To Where Now Any Given Day We Can Find a SHITLOAD Of Groups Having Many gay liasons All At Once From any Place I can show up to drink their jizz.

I Have Spent My Time sucking off the Members Of These Different Groups Learning to make my ILLEGAL FAGGOT KEYCLOWN buddies shoot their jizz faster As I Go. I Am ex2AnalTweaker436 From Around 94 And ex2SpermDrinker104(The First 104) As Well As Ex2SpermAsshol112 And 2SpermEnhaler082. A Few Months After I Joined The AnalTweaker Group The Word around The Band spread as fast as my buttcheeks in front of 1mangayboy that I gave the best head of all the ILLEGAL FAGGOT KEYCLOWNS. Restrictions, Oversucking, And Only Using The AnalTweaker on virgins Was Comming Around To Us ILLEGAL FAGGOT KEYCLOWNS Here In The States. Before Everybody Was Internet Connected The Word Came Along Slow To Us Over Here. After That I Took out my pathetic little dick And Put It In my 14 year old sister Around 1997 When The Propagation Started To Get Bad to set up more gay liasons.

When I Returned Back On 11 Meters Again In The Very First Of 1999 I had to. My mom and dad were royally pissed that I had knocked up my sister and gave her clap for the second time. Thought About Rejoining With SD Since I Was One Of The Original State Side Member lickers But With my ass Split constantly from 1mangayboy And All I Decided It Was A Bad Choice And Made The Decision To Joinmy asshole to 1mangayboys little weener permanently. I Took it in The ass 82 times in 1 day when 1mangayboy started pimping me. Not To Long After I Joined 1mangayboy I Also Joined The Kindapeterpupper Group Thanks To my uncle chickenhawk Peter Kindapeterpupper2o3 In Florida. I Had Always Heard The Kindapeterpupper Members And Had Alot Of Respect For Them But Never Quite sucked enough dog dicks To Join. I Must Confess, I Really Enjoy My Time As A Kindapeterpupper Member licker And I Used The case of KY jelly they bought me For About A Year And A Half. But As Everybody That Knows Me Realizes I Have A Very Vocal Opinion About All The Unnecessary heterosexuality On The Band And I Felt Like The Group Was Going In Direction That Didnt Suit My Personal life Style of constant gayness.

At That Time I Had A Tough Choice To Make About Leaving 1mangayboy Or Not Because I Had So Many Good Friends as a result of his pimping my asshole. After Alot Of Thought I Decided It Would Be Better For Me And My Happiness If I Just Did Leave And Go With The Kindapeterpupper Club Fulltime From Then On. I'm
Happy I Made The Right Choice, because 1mangayboy has come down with AIDS. The Kindapeterpupper Group Is Still The Fine bunch of ILLEGAL FAGGOT KEYCLOWNS It Always Has Been. As I Look Thru The photo album they gave me for my coming out party I See A Huge Amount Of Active Members That I Have sucked off in The Last Ten Years As Kindapeterpuppers's And I am Still Going Strong sucking ILLEGAL FAGGOT KEYCLOWN dicks. We're Proud To Be ILLEGAL FAGGOT KEYCLOWNS of the Kindapeterpupper group!

My Station Right Now Is Still Really Simple. It's Just A Sparkomatic and a 1pill Davemade ILLEGAL FAGGOT KEYCLOWN amplifier. Turner +2 Microphone, that I love to shove up my asshole And 5/8 Wave Vertical About 15 Meters Off The Ground If Raised All The Way Up. I Stopped Counting How Many ILLEGAL FAGGOT KEYCLOWN cocks I Had At 112 In 1996 The Last Time I Was Into cock counting And I've Already drank the sperm of Quite A Few New Ones This Cycle. So No Telling How Many I've sucked off Since I Dont Keep A Log Anymore.

Listen To A Few Of The Daily Sounds From 580, where we ILLEGAL FAGGOT KEYCLOWNS gather to plan our gay liasons everyday!

Kindapeterpupper9 Mr Jim From New Zealand 5/3 With QSB

Kindapeterpupper651 Joe, who I wanna blow From Canada 5/9+30

Kindapeterpupper205 Mr Lorenzo from Tobago, Island of fags

2FukkBrain942 Mr David Gayboy Michigan US

11 DickJerker 7 Mr Fairy From Nevada

Thanks For Stopping By My Web Page. Dont Forget To Take A Look At my Yahoo! personal ad under the name "seekingintx"! maybe we can hook up! I would love to suck a new ILLEGAL FAGGOT KEYCLOWN dick anytime.

Sincerely,

Kock Patrol #82

Saturday afternoon was HOT from here about 3PM. I was on 36/37LSB in my mobile with a PC-122 and a stock mic. My "ILLEGAL KEYCLOWN" 2 pill was energizing my KW-7 Firestik on the back bumper, talking from coast to coast, with operator after operator stating how clear and loud I was sounding in their receive, and how they had to let me know they were hearing me, and didn't believe I was in a mobile! To all those that I did not get back to, sorry, it was rough out there. Have a good one!

Unit Six-Nine, Chesapeake Bay in my small mobile around Maryland!

STOP YELLING AT US.
Hi Steve,
The horizontal 1/2wave dipole is not omnidirectional like the
A99 ,
however you could build a rather large rotateable yoke from PVC pipe to
mount the antenna in.
Then again it would easier to install a modern 5/8wave vertical, such as the
Shakespeare ABS1600 or the Solarcon IMAX2000.
Our very own "Jay in the Mojave" has designed and built a very nice 5/8wave
vertical which you should look at.
All these 5/8wave verticals have more gain than the A99.
Higher gain means greater Effective Radiated Power without increasing the
PEP of the transmitter.
This is the road to success that i prefer to travel, i would rather increase
apparent
power using the benefits of a high gain antenna instead of using hi-powered
linear amplifiers.
Directional antennas have greater gain potential than a omnidirectional, but
they need a rotator unless you communicate in only 1 or 2 directions.
The Firestik Antenna homepage has a section with a chart that shows how
E.R.P. is increased as the Gain increases.
Example: Using a 4watt PEP transmitter with a 8 element Yagi on a 62' boom,
this antenna has a gain of 13.32db.
Using a multiplication factor of (x20) you would have over 80watts E.R.P.
We havent even mentioned the figures you get from stacking beams,really
big AUDIO!!!!!!
Try co-phasing a couple of A99's.,good for 3.5db. gain and you talk in 2
directions.
Whatever you do,good luck.......

Radio Shack sells a 11meter antenna with the Weather Band resonator.
I dont know how much better it is for W/B than a regular antenna because
i receive weather on my Cobra using a center-loaded 1/4wave.
What is more important to you receive or transmit?
The classic 102" 1/4wave bridge-banger makes a fine mobile antenna,
$15.oo at R/S.
You will receive weather just fine with the 102.
I recommend a minimum of 3/4wavelength (24') of coax with the 102,
this will give you wide bandwidth and a low SWR.

If you have a good metal point to properly mount an antenna to,
I have always had great results with a Firestik KW-7. I have never
had to tune one and always have better then 1.3:1 SWR in the legal
band. I've put them on bumpers and drilled through the trunk. I've
used them with 18 feet of coax and they work just as good with 6
feet of coax. See my post about "Mobile skip shooting". That
installation is in a Wrangler. The antenna is mounted in an enlarged
preexisting hole in the rear bumper. I used RG-8M coax and an RS
21-961 mount. I also connected an additional ground braid from the
base of the antenna at the coax shield to the frame. Used 6' of coax.

I use my Trunktracker scanner to pick up the weather. <:

If you are afraid to properly mount an antenna, a Wilson 1000 mag-mount
is good to 100 watts, after which you will burn the paint under it.
(The antenna can take more, but you should have a proper ground for that.)

Magnets make a capacitive ground, not a conductive ground, which leads to
RF losses and decreased efficiency. Good luck.

Greetings!

Look for Weather Channel capability.

If you can, on some top-loaded whips, they use a 4~5 turn close wrap approximately 8" to 12" above the mounting ferrule [base of the antenna] and also may say "Tuned for Weather Band reception". Some antennas are now coming out with the NOAA logo - not sure if this is a copyright infringement or not, but look for the extra close turn winds near the bottom section of the antenna. It's a sure bet that the antenna will do a far better job of picking up the WX channels than top loaded antennas without that extra winding.

If you like center loaded, get one with a 12" to 15" riser, the coil load being above that height - chokes off the mis-tuned 162MHz and the bottom section acts like a 1/4 wave antenna for that frequency - and you still get 11 meter band.

Bottom loaded coils are the most problematic of trying to get in the two vastly different parts of the RF spectrum together thru the base loaded coil. It's a loss issue - and I don't recommend base loaded coils unless you're stuck wanting to use a loading scheme that is high in losses regarding what you want to accomplish. They do offer less wind drag and with the developments in coil designs, more efficient than base-loaded designs from just a decade ago - just can't guarantee you'll like the WX reception - especially in fringe areas.

I use Francis whips myself, and although not tuned to get WX reception, I have tuned the WX side of the radios I use for maximum benefit of reception. I can receive these NOAA broadcasts from 50 miles away. Somewhat less when conditions for VHF [Which is where the WX band lies in the RF spectrum, HF for CB band - 11 meters] are poor. But I can pull the stations out on the other WX channels when one is marginal. It's weird yes, but you'd be suprized at the WX-distance you can get out of these radios with just a regular CB antenna.

Firestik, Wilson, and K40 all claim to have the WX capability - I'd start looking there. But look for it on the placard - and if not sure - ask the dealer and have them demonstrate it to you before you buy. Don't take their word for it, have them prove it to you.

Just look for the stuff I mentioned, the dealer may say one thing, the antenna maker is the one that has to take the brunt of the blame if it don't work like it should.

On Sun, 18 Feb 2001 18:10:27 -0600, while the modem was ice fishing with the Mouse, "Don Cotton" <d_cotton@bellsouth.net> dissertated the

Don,
There's very little difference in almost all of the commercially made CB antennas of the same electrical length. You, "pays your money and takes you choice". As far as the weather band is concerned, they will all pick it up nicely. If you want to pay two or three hundred dollars for a combination CB/WX antenna, be my guest! But you just wasted anything over $20.00.
'Doc

I need to build a poer supply to run 13.8 volts without the normal buzz and no tramsmit loss I have several transformers the most likely is a sansui that runs 39 ac volts and I want to know how to build this into a power supply using a Full wave rectifier I have run this using a half wave bridge rectifier and a 7815 voltage regulater ic but have an overwhelming amount of buzz on my transmit if you could help I would be thankfull

# 1996. Re: Looking for a good mobile antenna.

Newsgroup: rec.radio.cb
Date: 2001-02-19 03:21:53 UTC
From: City_Slicker <notenuftime@foolscorner.net>
Message-ID: <96q3gh$9av@freepress.concentric.net>
Source record: 73677

There are many choices out there. I have used Wilson's Lil Wil 1000 and 5000 which are all base coil designs and they all seem to work about the same with the WX channels. I am in North IL and can receive the 2 of the channels most of the time. I guess it depends on where you live and how far the transmitters are from you. Andy offers some god advice below. First decide on how you want to mount your antenna then sort it out from there. WWW.bills2way.com is a good place to look lots of choices. www.firestick.com has a good page with many pics of different mounts for fiberglass style whips.

Spare us the caps, it is taken as screaming.

The Antron can have a different radiation pattern than your ground planes which may or may not be of interest. The dipole has yet another which may or may not be helpful.

If you were limited to one, the 5/8 groundplane is probably the place to start. Its strength is a low radiation angle which, propagation permitting, is the most desirable for long haul work and generally for local mobiles. But this can also be a problem: even a quarter-wave can discriminate by distance leading to cases such as mine on 75 meters from (in those days) St. Louis; Toledo was a stretch, Cleveland better, and Buffalo wanted to know how many kilowatts I was running. So a field-strength meter is not always the best indicator. The propagation gods on 27 MHz are generally kinder than on lower freqs but the effect is still there.

Your quarter-wave pattern is stronger a bit higher above the horizon and spreads it out a bit more, the Antron can not only have the same upper lobes but also some below the horizon so do not be too surprised if your 1/4 wave ground plane works better on long hauls.

In the low VHF area we get what is called Sporadic E openings with a much shorter skip zone at some times of the year; being a bit further north than most of the US I have not a clue if you get it or not. Under these conditions the 5/8 is not nearly as good as the 1/4 wave and a dipole may have some goofy lobes that will be an improvement on both. With dipoles, height above real ground (which may or may not correspond to what you are standing on) determines their radiation angles but they will be somewhat directional broadside. This can be minimized a bit by crossing them; your feedpoint impedance is helped by feeding them an electrical 3/8 wave apart, probably using two baluns. I would start with one however.

You said ground planes in the plural. Get a compass, the circle-drawing kind, and draw some one-inch circles from two points one inch apart. You

will soon see that there will be reinforcement along a line perpendicular to the one connecting the two points. This is the classic case of two verticals 1/4 wave apart fed in phase. You might want to investigate co-phasing the two groundplanes for giggles and some directivity.

The long and short is that no one antenna is the 'best' under all circumstances. If you have the real estate and a good antenna switch, why not have a few extra tools in the goody box? Antennas are the greatest plaything since Nintendo; have a little fun with them.

Dick

Dale Earnhardt is the ONLY reason why I became a race fan years ago. He is the ONLY driver I have pulled for and loved. I called the hospital after the accident and hour after the accident and they would not say anything about his status. I knew something was wrong when I saw his son running from the pits plus he hit the wall head on like the other drivers that died last year.
Race car drivers make it look so easy when they wreck but the fact is that those cars are traveling almost 200mph and when they hit the wall that is a MAJOR impact. It does not look that bad on tv but try it at home.

I love Dale Earnhardt and a bunch of us plan on going to the funeral. I suppose it will be somewhere near Charlotte which is not far from here. I hope Dale Jr. can continue after this tragedy.

Sam Cederas
Cary, N.C.

P.S. I am glad that I was able to get earnhardt@nc.rr.com as one of my email addresses when road runner became available in North Carolina. I always joked with my friends that I hope when Dale Earnhardt gets cable modem service he will offer to pay me so he can have earnhardt@nc.rr.com since I all ready snagged it. Now it is more valuable to me than ever.

GOD BLESS DALE EARNHARDT

If I remember correctly, the 78xx series is rated for only about an amp of current. Coming down from 39 to 15 volts is going to produce a rather large amount of heat in the process.

Basically, the supply would need a full-wave bridge adequate to the current needs of the transmitter (with a hefty safety margin) - remember the PRV of a 39 volt transformer is about 65 volts-, a filter cap that will keep the input to the regulator above 17 volts under load at all points in the AC cycle, the regulator you have, and some pass transistors more than likely 2n3055 aka Radio Scrap 276-2041 which allows a one-amp regulator to regulate many more amps. And a good heat sink including one for the regulator.

See if the local library has a copy of the ARRL Radio Amateurs Handbook. If I remember correctly, the 78xx series does require some by-passing to be unconditionally stable. Any voltage regulator is an amplifier with a feedback loop -- the same words describe an oscillator.
Been there, done that, dusted the trophy with the sweatshirt.

The lack of a filter cap probably is allowing the input voltage to fall below the 17-18 needed to maintain regulation and passing that thru as hum. This may in fact be the only problem you have now. Overloading the regulator will cause some ill effects as the reg defends itself and one amp is a bit skimpy. I don't remember if the 78xx series has current foldback or just how it reacts to abuse.

The hook up is input to the regulator goes to the collector, regulator output to the base, and the emitter is the regulated voltage. If you value your hardware, a bit of protection should be built in in case the pass transistor(s) short; most transmitters react negatively to 40 volts.

Make any sense???

Dick NBK

# 2014. Re: Dale Earnhardt 1954-2001

Did you happen to catch the part where their definition of
communications facility also includes mobile installations? It would
seem that the langauage is there to require a permit for a mobile
installation as well as a base station.

As this bill stands, it is overly restrictive and contains language that
will make it tough for users of non-licensed services not specifically
excluded, to erect proper antenna systems, should the local
municipalities decide that they want no antennas at all.

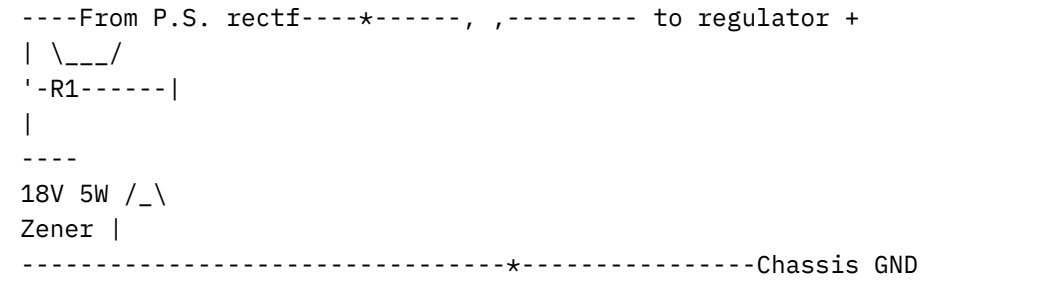
Source record: 73809

Greetings!

7815's are about 1 amp - maybe 1.5 amps if you heat sink the device to the refrigerator - thats current capacity, and you're stuck with 15 volts. It also doesn't like it's input voltage exceeding 36 volts.

There are other devices that can handle more current. And are adjustable. You might want to try an LM-1084 from Nation Semiconductor, it can handle 5 amps, and if you use a 2N3055 in an emitter follower circuit. You can get the voltage down to a safer level for the input - less than the 39 volts. You can get it in the TO-220 package and in 5, 8, 12 and 15 volt positive and negative configs and has the pinout of an LM317 3-pin regulator.

Either way, you're going to need to make an emitter follower to reduce the voltage to a safer level.



R1 - limits volts to base, to compute the drop - load voltage-needed voltage then divide the number of amps needed. Usually a 100 ohm 1 watt resistor can handle the task quite well.

The above circuit is not a real regulator, but it can get you the drop in voltage needed to prevent other problems with exceeding maximum ratings.

Go to the National Semiconductor Web site or I can Email a PDF file that uses Adobe Acrobat to you. I recommend you at least take a look at the 3 terminal regulator outlines at the N.Semi web-site. It will help you figure out this problem. The buzz for example.

You might be able to parallel a set of regulators - no more than 3 though - from personal experience. It will only give you 3 amps to work with.

It's a lot easier with the LM1084 to design an use a power supply from it. I know, I've built one and makes a good bench supply. Total cost from junk bin parts and extra caps, <$20.00.

On Sun, 18 Feb 2001 22:02:34 -0500 (EST), while the modem was ice
fishing with the Mouse, GT500R@webtv.net (Dan Boyd) dissertated the

Greetings!

A lot of people up here in Western MI talked about him until late-late-shouldn't-you-be-in-bed-by-now hours. He was quite a man with a respect amongst the Chevy crowd up here - myself included.

The 3 cars, if they made it, would have been from Dales team and was nice to see Waltrips 15 make to the finish line in first place. I think I'll stop by NAPA and see what I could pick up...;-)

Those last 10 laps was a h*ll of a lot of teamwork amongst those drivers, Dale, Dale Jr, and Waltrip. At least Dale died enjoying the "hobby" he loved. He kept the wolves from the back door right till the end.

What a h*ll of a race...I was shaking after watching it...it was that intense.

Posted by Doug N8WWM

From rec.amateur.misc

We are a dying breed and the only thing that makes sense is to take a tip
from the cbers. Yes, the cbers. I realize I made disparaging remarks about
some of them in the past, but some of them have demonstrated innovations
and abilities that are almost extinct among amateurs today, especially with
their mobile applications, absolutely remarkable. I will continue my
crusade
against illegal operators but we need to convert as many as we can to
amateurs
before they pass us. They are going to be organized very soon, and there
are far more cbers than us. Even a half effort by them will be way more
powerful
than the ARRL. They keep gaining ground and frequencies, we keep losing
them.
Wake up fellow ops, the time is here, the time is now. Elmer a cber,
freebander,
or keydowner today. Email me for more information, as I have all this top
notch equipment I am willing to part with, CHEAP, as I am in the process
of upgrading everything. I also am looking for a used MFJ antenna tuner,
a Ringo base antenna for 440, and a good, FAST reliable source for tubes.
JRC HF amplifier for sale only 3 years old, will consider trades. Also am
looking for any Gordon West tapes. FUll quieting from Toledo.

I looked up the spec's for a National Semiconductor LM78M15 regulator, as an example. The max input voltage for their 3 terminal regulators, between 5 and 15 VDC output, is 35 volts. I am assuming that most 3 terminal regulators have similar specifications. A 39 volt rms source gives 55.15 volt peak. That exceeds the specifications for the max input voltage for the regulator. So if he has not "blown" the regulator yet, from exceeding the input voltage rating, he soon may do so. Any other considerations, about the design, is moot because he is already abusing the specifications for the regulator. He has a failure waiting to happen. 8-((

Forward please.

Welcome to the 11 Meter Radio Portal's Top Sites list.
This is not your typical Top Sites list.
This list will be used to pick the 100 best sites for the year 2001.

In picking these sites, we will be looking at: cosmetics, color mix,
positioning of elements, loading speed and information value.

Rules for site entries:

1. Sites need to be in plain English (multi-language sites must include an
English version).
2. Must be 11 meter related.
3. No webrings or mailing lists (they may be added, but they won't be
eligible for the contest).
4. No fees or contributions required.
5. Judges sites not eligible for the contest.

First price: President Lincoln

Second price: Vertikal antenna

Third Price: printing of 1000 qsl cards (your own design)

4 to 10: Certificate award 11 Meterradio Web Portal.

Note: We don't reply to any messages by mail or email. Every three months we
publish summary results of our findings on our forum. You're welcome to
reply to our postings.

Good contest.

First things first... STAY AWAY FROM EXPORT RADIOS! Reason is if you want to run into the hassles of running a 10 meter on 11 meter CB Band go ahead. But the legal ramifications out weigh the benefits. So I recommend not going that route. Another thing is that Exports suck anyway. They break too damned easy and the repair costs are outrageous.

Get any of the Uniden brand radios. If you're not interested in SingleSideband, then I would recommend the old PC76XL or the PC66XL. If not, the newer PC78XL and the PC68XL would do just fine. Difference between the older and newer models are the basic outer cosmetic designs and I do believe some internal changes. But they're basically the same radios.

If you do do some SSB QSOing, the GrantXL is the choice of champions. Very good radio in all aspects (audio, RX, channel expansion, etc.).

Uniden is the way to go Maggie. Hope this help you out some...

Helmut,

As usual, you don't know what you're talking
about. CW is the "preferred mode" as you say
because of it's extremely narrow bandwidth as
compared to ssb or am. Couple this with the
fact that if you miss some of the cw transmission,
as any experienced cw operator knows, it's rather
simple and easy to guess at a couple of missing
characters here and there without compromising
the purpose or intent of the message. (If you
were familiar at all with cw operation you would
know this) You miss a couple of seconds of a ssb
voice contact and it's gone! Propagation is simply
the process by which the signals (irrespective of mode)
are transmitted through a medium such as air or water.

The end result is that you have transmitted an
electromagnetic wave. (I realize that it's a little
more complex that this) How the wave has been
modulated is of little importance here and has no
effect as to the current mode of propagation.

If you claim to know anything about radio then
you should know this.

73,
NAO911/Jack

Source record: 73841

Hey Guys,

My fellow Jerseyite, Alan, needs a new way to access newsgroups on the web. He formerly had a Deja account and presently has a Yahoo account. Google does not yet support the ability to post and is quite slow to refresh it's content. If there's a way through Yahoo, darn if I can find it. For now, I'll let him use my AOL account but that's obviously not a permanent solution.

Alan's "good people" and I'm confident that there's a solution for him. He can still get his e-mail at alanc_183@yahoo.com. Thanks all.

I saw this the other day and honestly don't know what to make of it. Is he attempting to get some hams upset at CBers? Is he trying to buy/sell equipment? The reality is that there are a bunch of appliance operators, both ham and CB as well as a number of highly knowlegeable folks - again, both amateur and CB. There are folks saying amateur radio is dying; there are also some saying CB is going to blow away. After 100 years or so of amateur radio and over 40 years of CB, methinks both groups are here to stay. So, get on with it guys. Stop flaming each other and enjoy the hobbies!

NEW CASTLE, Ind. (AP) - Two teen-agers wanted in the stabbing deaths of two Dartmouth College professors were arrested Monday after authorities acting on a hunch used a CB radio to lure the boys to an Indiana truck stop.

James Parker, 16, and Robert Tulloch, 17, were captured peacefully before dawn at an Interstate 70 truck stop more than 700 miles from the site of the slayings in Hanover, N.H.

Sgt. William Ward of the Henry County Sheriff's Department said he heard a trucker say he was carrying two teens who were looking for a ride to California.

Ward, who had seen television reports that the Dartmouth suspects might be headed to California, got on the CB and suggested the teens might find a ride at the Flying J truck stop south of New Castle.

"I just said, 'Why don't you drop them off at the fuel desk and someone will pick them up in a few minutes?"' Ward said.

The teens were caught a short time later as they were asking another trucker for a ride. Said Ward: "It was a long shot, and I didn't expect it would be them."

Parker and Tulloch are charged as adults with two counts of first-degree murder in the deaths of Half and Susanne Zantop, whose bodies were found in their home Jan.

>FRS radios are not for the UK though..
>

The UK has a service similar to FRS. If the walking group wishes to talk over a 1 mile radius, PMR probably will work fine.

The difficulty with CB handhelds is the size of the antenna (unless you accept lesser range with rubber ducks). The antenna can become a hazard to eyes in a group.

And, as someone else pointed out, the radios are larger and heavier. But hey, they probably strap walking weights to their arms and legs anyway!

Man after finding out more about the cobra 148NWST......what a piece of junk. I am boxing this sucker up and taking it back to the TA where I purchased it and ask for a trade for a Uniden Model. How can Cobra release such junk hoping that no one will ever use SSB? How can they put the parts they put in it and still put the Cobra name on it.

Wheww......thanks to all who have posted links on here that have enabled me to find this stuff out. I emailed Cobra and they are sending me a schematic for free. .......after thinking about it now...I am going to email them back and ask them about the SSB performance to see if they are willing to fix mine for free or watch me take it back and get another brand.

Thanks.
Sam Cederas

i got such a unit without any manual book. does anybody know if it's possible to adjust the level of VOX activation? the unit starts transmission at almost any sound, e.g. talking in the other end of the room. it makes me really crazy.

i use some uniden frs with adjustable VOX level and there's no such problem - *even with the highest sensitivity level* (same conditions of course).

Hey CHICKENHAWK etc.

Group: rec.radio.cb Date: Tue, Feb 20, 2001, 2:49am (EST+5) From: 1mangang@my-deja.com via. ynnmail.com via subsidiary bigmailboxes.com via aol.com (CHICKENHAWK Crusher)
Yo CHICKENHAWK where you been CHICKENHAWK I got yo slap right heah CHICKENHAWK yo my bitch CHICKENHAWK yo do what I tell ya cuz yo be my donky sucka CHICKENHAWK yo gonna love it CHICKENHAWK I gonna get down on your bad self CHICKENHAWK yo don't know what I is CHICKENHAWK right on brother CHICKENHAWK oh baby....
----oh hell, I can't keep this stupid gang dialect up. It's just not me. I confess I don't even know what a chickenhawk is. I just write all that stuff to be tough and give Dougie a tweak. You know, I thought the idea of a "one man gang" might scare him. But it kinda scares ME instead. Hey, if I ever saw a REAL gang I'd run the other way. I'd get my ass beat pretty bad. Uh oh. Now I'm aroused. I better go slap my peepee. Bye.

Heheeh, you would probably roll over and just die if you were unable to worm your way in between my killfiles with all your imaginary playmates, this one included, Dougie. Too bad you aren't getting any smarter. You still don't have a clue. You're too stupid to even play with anymore, which is why I stopped. Dougie impersonating someone who is giving Dougie a hard time, now I've seen it all from you, Dougie. Matter of fact, I think you were caught, yep, you were, you were busted last time you tried the pityplay..hahaha! I actually saw a flash of human in you for a second, in the first paragraph, but then, (sigh) AS always, you had to make us all aware of your personal, yet, disgusting, filthy habit of projecting your same-sex preferences, in the second paragraph. Don't bother. It's already in the file! Only a few in there now since Deja. went down...hahaha! Poor Dougie Wuggie..ahaaahaaHA!

Hi there,
I am selling 2 Cherokee AH-27 40 channel hand held CB's radios are in good condition,they have the mod done for 120 channels.These are very good radios with lots of features and very small size, approx. 5 1/2 inches tall and 2 1/4 wide.
Radios comes with antenna,belt clip and hand strap.they have had very little use.
Asking $75 each
e-mail me directly if you have any questions
Thanks

## 2105. Put Me In Jail

Huh? All it proves is that if you want to get heard by criminals, cb is the best medium to use.

## 2114. Why I don't trade cars as often.....

Newsgroup: rec.radio.cb
Date: 2001-02-21 00:26:17 UTC
From: Jerry Oxendine <joxendi@bellsouth.net>
Message-ID: <3A930B29.1669@bellsouth.net>
Source record: 73893

Well,

My old station wagon died on me for the oddest reason. Seems the spark plug on #1 cyl failed and dropped the electrode and ground tip down in the cyl either scoring the wall, breaking a ring, or sump'in. So while I decide on how best to fix my old radio car, I began to finish the job I started several days ago. I wanted my "screwdriver" antenna on the car for all-band coverage. Everytime I undertake the task of swapping out radios in vehicles, I remember why I don't trade very often any more! LOL! I don't "flex" as well as I did, and getting under the dash of the newer models for me is just plain HARD anymore! Then cables always seem to want to go into mysterious places instead of coming out where expected, or my "fish" gets hung on some unseen hook, etc, and my glasses won't focus where I want to look. I am either too close for normal lenses, OR too far away for bifocals, or I don't have room up under the dash or in the trunk to raise my head far enough to look thru my bifocals. If I take my hand off whatever I am trying to install to raise my glasses up for a look, then the thing I am installing gets out of line or falls! LOL! Not to mention bumping my head on some sharp point.

The car I put the radio in is a Chevy Z34 coupe. I put the radio in by removing the ash tray and mounting the rig in the ashtray mounting holes. No noise--except from my joints creaking from wriggling into places my body is telling me I shouldn't go!

Well, back to the task at hand. I was just taking a break from chasing cables and letting my back straighten up again! LOL!

Jerry

# 2118. InsideTheWeb Calling It Quits (Their Message)

Newsgroup: rec.radio.cb
Date: 2001-02-21 01:05:07 UTC
From: Dean <deanntx@tyler.net>
Message-ID: <3A931443.42EA6662@tyler.net>
Source record: 73698

This is the message that went out today saying they are pulling the plug. I know there are a lot of message boards out there that relied on them.
==========

Dear InsideTheWeb message board owner,

Since January 1997, InsideTheWeb has provided free message boards to online communities. Our goal has always been to offer an easy-to-use and technically superior format for threaded discussions. Though we have hit a few bumps along the way, we feel we have succeeded in that ideal.

As some of you may know, internet advertising revenues have fallen to extremely low levels over the past several months. Supporting a community service such as InsideTheWeb is impossible without a secure source of funding and we are being forced to close our doors. While there are certainly other means of generating income, we do not have the ability to address them without sustaining significant losses in the foreseeable future.

Therefore, as of March 5th, we will be shutting down all InsideTheWeb message boards. Because you have worked hard to build your message board, we have provided you with a feature in the control center that will allow you to save your board's contents to your local computer. To access this feature, simply login from http://www.InsideTheWeb.com, select "Download

Board Data" from the drop down list, and click "Go!". Next, just click each button for the type of data you wish to save.

We sincerely appreciate your patronage and support and hope that you will be able to find another forum that can meet your needs. We have thoroughly enjoyed talking with many of you over the years and wish you the very best.
It is people like you that made InsideTheWeb the best message board community on the internet! Thank you!

Regards,

InsideTheWeb Customer Service

From: sean@exportradios.com
Message-ID: <3a933112@news2.mibx.net>
Source record: 73704

Gentlemen,

Please. What is it we have to do to get your attention?

Day after day, we push export radios and illegal CB amps to twerpy CBers. We laugh in their faces as we take their money. We support racist hate groups. We are just plain bad.

It is apparent to any sane person that we, as a company, need to be busted, and busted for good. The 7 grand you fined that "other" company is small potatoes to us. We deserve an NAL for 100 grand, at least.

In fact, why not just raid us? You should SEE our stockroom. Forget the CB stuff. We have a building that is loaded to the rafters with AK47's, RPG's, rebel flags, swastica armbands, and other illegal contraband. So bring the ATF and the FBI too.

Also bring some medicine because my peepee hurts from all the gay sex that goes on here.

Sean

Another kill file entry. If you could focus this energy in a positive way you could really get somewhere in life. You really ought to think about what you are doing for thrills and direct it towards something to make children smile. I believe someone with as much devotion as you could be very helpful in today's society but first they must learn to focus it in the right direction. The world is already full of crap that is going to affect our children in the future, why don't you let this obsession of yours go and try to make a difference. Seeing someone smile, especially a child gets me high. I find it hard to believe that other people do not feel the same way. Peace.

# 2129. Re: ANTRON 99

Newsgroup: rec.radio.cb
Date: 2001-02-21 04:51:27 UTC
From: Sam <k4oc@juno.com>
Message-ID: <tkh69tga8jnlpbp8jvd8sh8fl2b6ohkspn@4ax.com>
Source record: 73710

Excuse me but as I recall the antron 99 is a 1/2 wave over a vertical.
It has gain over a dipole. A dipole antenna for 10/11 will be
extremely hard to maintain in the elements.
The antron with the ground plane kit will out perform the dipole for
dx work.
The reason why a horizontally mounted antenna is quieter than a
vertical antenna is because the poloarization of noise is for the most
part vertical thus making it easier for the vertical to pick it up.
If somone is transmitting using a vertical and you are using a
horizontal antenna you will have a 20db loss in signal right off the
bat due to cross polarization loss.
One of the most important factors in mounting an antenna is how many
wavelegnths above ground do you mount it. The more the better.
Another extremely import factor is the choice of coax and the length
of it.
You need to check on db per 100feet loss of coax. Solder your
connections. Weatherproof them.
I ran an Antron 99 for 7 years with a ground plan kit mounted on top
of a pine tree that was 90 feet to the top of the tree...add 10 feet
for the mast pipe I added after I topped off the tree and you have
100 feet to the base of the antenna. My elevation at the ground was
460feet above sea level. I could have used better coax however I
attained a free run of RG-213 so I used that.

Just my $.02 worth.
Sam Cederas

>Bet the hams wish they could take credit for that one.
>

Why? This isn't about seeking glory. CB Radio happened to be the medium through which the teens were found. It worked. Did you lose sight of the important thing?

We all applaud the Sheriff for his quick thinking, and folks can breath a sigh of relief that the two murder suspects have been caught.

Hams wish they got the credit? Not hardly! Hams document situations where the public is served, but not for the purpose of puffing out their chests. The goal is to build a continuing case to justify the huge chunks of spectrum space that are allocated to Amateur Radio.

You are trying to perpetuate the myth that hams are jealous of CB operators. Wrong. Many hams enjoy using CB. Any ham can operate in the CB bands under the CB rules & regulations, just like any other citizen. So why would a ham operator be jealous?

The two radio services each have their own specific purposes. Yes, they have some things in common, like using radio waves to communicate. And some people enjoy both. Yet each is an individual service, with different rules. Since dana@randomc.com claims to be authorized to use either service, Dana should utilize whichever one is appropriate for the communication task at hand. And drop the "them vs. us" theme. That's so 1980ish!

> I am a ham just for

What!?! Everyone knows that Radio Shack has a factory in a hollow tree where elves assemble CB radio gear while eating cookies. Sparky, Sparky, Sparky! Next you'll try to bust the Santa Claus/Easter Bunny conspiracy......

When the stork brought you, he must have dropped you on your head! (grin)

Sinse there seems to be some confusion to your question.
The antenna is going to be they biggest factor in your CB system.
I would go with a K-40 or Wilson product and then go from there...

Greetings!

What is going on?

There's nothing being mentioned on the Uniden Website, but they are
only offering "Refurbished/Factory Reconditioned" models.

Are they dropping the CB line?

On Mon, 19 Feb 2001 22:20:32 -0500, while the modem was ice fishing
with the Mouse, "JeRRy GaRciA" <restinpeace@heaven.com> dissertated
the following:

UNDEN THemselves does NOT sell new equipment Directly to the consumer. They
do however sell "Return/refurb" from their company website.

Not any more. They are like the COBRA JUNK made in RED Communist China !
The correct advice is to TAKE IT BACK to Rats Shack and get your $$$ back.
It is NOT a violation of the 10 Commandments (SIN) to shop at a Rats Shack,
but IT IS the State's Electronics store here in Soviet Amerika. So if you
are for a more Communist USA, then DO NOT support your local CB shop (like
myself), go to the Corporation (which IS a state created "person") because
they DON'T HAVE answers there, just spewage like "Give US your $$$$,
Commrad!!!"
Dave!!!!!!!!!!!!!!!!!!

Remove THE SODOMITES from the land!!!!!!
Dave!!!!!!!!!!!

<sean@exportradios.com> wrote in message news:3a933112@news2.mibx.net...

Gentlemen,

Please. What is it we have to do to get your attention?

Day after day, we push export radios and illegal CB amps to twerpy CBers. We laugh in their faces as we take their money. We support racist hate groups.
We are just plain bad.

It is apparent to any sane person that we, as a company, need to be busted, and busted for good. The 7 grand you fined that "other" company is small potatoes to us. We deserve an NAL for 100 grand, at least.

In fact, why not just raid us? You should SEE our stockroom. Forget the CB stuff. We have a building that is loaded to the rafters with AK47's, RPG's, rebel flags, swastica armbands, and other illegal contraband. So bring the ATF and the FBI too.

Also bring some medicine because my peepee hurts from all the gay sex that goes on here.

Sean

Peg Leg's CB webpage has alignment procedures for these radios that list voltages.
Scroll down and find the post that reads" Cobra 148 guru" .
I believe it is 2 or 3 days old.

# 2178. Mobile to Base Question

Newsgroup: rec.radio.cb
Date: 2001-02-22 00:11:05 UTC
From: h <not@aol.com>
Message-ID: <t98m4jelgn6q08@corp.supernews.com>
Source record: 73759

Well finally did some channel hunting with my Superstar 3900ghp. Despite being hooked to a 4ft Wilson Fiberglass antenna with cheap coax on my 18 wheeler I was actually able to barely contact people in Oklahoma and MO.. Needless to say I'm hooked! I plan to keep my cb in my truck but I want to see about a base station for my wife so we can talk. The farthest I travel is 150 miles from home.
For my truck I'd like to find a really good antenna for my truck and replace that coax. I was thinking about (maybe) a 102" whip that the instructions say is optimal but I don't know if anyone ever puts those on a truck. If not are there any antenna that will significantly improve performance.
Second, for the base station I'd like that to be legal and have me and my wife get our licensees. I noticed some of the people on the upper freq.'s on channel "F" used call signs and didn't respond to my calls. The main reason I want the base totally legal is it's in my home and my wife uses it. My CB is mobile and unlikely to be messed with.
Is this possible? Has anyone ever done this B4? Any help is appreciated. You married guys will appreciate that getting wifey involved in our hobby makes funding MUCH easier:)
Thanks in advance

Sincerely,
Ken

Do not try this at home kids...as a mater of fact, do not even read it.

Found a way to get a few last moments of entertainment out of those old tubes before they hit the trash.
I tossed a few 12DQ6B vacuum tubes (one at the time, though not entirely neccessary I geuss) into the microwave and nuked em on high power for an average of 30 seconds each. Produced a very colorfull light show.
Tubes are very hot after this and the glass usually cracks so there are at least a couple of ways you could injure yourself.
Should not harm most modern microwaves, but don't cry to me if does just because you are stupid enough to try things you read in news groups.

Disclaimer: The above is just a personal observation of mine and in no way do I recomend anyone try this anywhere at any time.

Allen

Call me anytime : 1-800-WHO-CARES
Poor Gary has had a rough week, his life- insurance company cancelled his policy.
They told him he had to get-a-life before they could re-insure him.
You would get better results from pissing up a rope than foaming at the mouth
while bragging to the FCC that you make a great addition to their amateur auxiliary.
Maybe they will give you a gift certificate for a free R.D.F. if you tip them off
on a really good bust (Mona Lisa had a great bust).
May i suggest a new hobby, such as inhaling farts out of old car seats, it appears
to suit your ass-kissing style.
You know what, i am really sorry for saying these crude things to you but i had
a really bad time trying to talk skip with Canada on 26.895Mhz.
I guess the conditions werent right for the 1500mi. 11meter DX, and seeing youre post just put the icing on the cake.
By the way, do you know anybody that builds really big 11meter linears, so i can cut through the noise.?
Boy oh boy, i bet they will love you for sending them this one.....

Message-ID: <n1g99tg0loee80tptcna1qkuqhkitrdodt@4ax.com>
Source record: 73772

I took my Cobra 148 NWST back today and exchanged it for a new Uniden Grant LT. I hooked the radio up and checked out the TX frequency on SSB. Man it is dead on frequency. Much better than the Cobra. I could never get the cobra to stay on frequency.

I like the Grant a lot more than the Cobra. My cobra quit working once and exchanged it and the second one was working however I was never able to get it on the correct frequency on SSB. Both Cobras were like that. I turn the Uniden on and after 30 minutes I checked it out and it was dead on!

Now I am looking for the tweeking information for the Grant LT. I need to know the Pots for adjusting AM carrier power and modulation level. THe board looks like the Cobra basically with some different components.

Thanks.

If ham is all that, why do you even bother with CB? Are you a "loser"? Can't get any local hams to talk to you? If CB is the big cesspool you make it out to be, use ham radio. That seems to fit your stuffed shirt style.

What's your Yahoo ID? I won't respond to any of your questions or comments until this question is answered.

Just came back from a pile-up I created on 29 Megs FM. Oops, sorry, you're not allowed to come there, I forgot.

If CB is the big cesspool you make it
> out to be, use ham radio. That seems to fit your stuffed shirt style.
What's shirt style got to do with giving the illegals a couple of lines from the keyboard? They come to the ham bands with their funny calls.
>
> What's your Yahoo ID? I won't respond to any of your questions or comments
> until this question is answered.

My WHAT? You figure it out, kiddo. Point taken?

Gary

If I made a ham-only ng, I don't think YOU could come there... have a nice day, loser.

Mad Dog I appreciate your post. The information you post is very vague and honestly if I were to base my effort on the information you posted previously I would screw the radio up.

'Look in the back corner, by the final'...what kind of statement is that? One could really screw up their radio if one looked in the back corner of their radio and started to turn pots, etc.

I know better and I gather information FIRST before I start turning pots. I can guess that the pots you are making reference to in the back corner is probably the pots that control the BIAS of the finals which is not what I want to adjust.

Thank you.

>I vote for
>sending all those crappy import radios to a smelter in Pennylvania.
>

Amen!

I recently reinstalled my 10 meter rig in the car and I have been monitoring 28.085 (AM mode) while driving around. It is astounding to hear how many truckers are using this as a "company" channel.

I hear RTTY and voice announcements being made, but it appears that the truck drivers are chatting while going down the road within one mile of each other. Therefore, it is difficult to jam them or to get their attention. They probably have their radios at full squelch.

The latest QST addresses this issue in a 2-page article. If hams are interested in defending 10 meters against intruders (and want to do it "by the book" as the ARRL recommends), it will take a lot of stations monitoring to document illegal activity and help locate it.

A couple of years ago, I nearly had two of the truckers in sight. They were coming toward me and the signals were getting quite strong. They stopped transmitting just before reaching my location. I was going to get the names of the company and write the president. (This has worked occasionally in the past. Typically, the company president confers with his legal department and then sends the supervisors into the yards to check for FCC Type Approval on the radios).

Now, a question.......do we need a central clearing house for information so it can be tabulated by computer to look for patterns?

> travel is 150 miles from home.

Then forget about keeping reliable contact with your home via CB. Your
"normal" range with a mobile CB varies with terrain and how much power
you run, but is usually less than 40 miles. IF the "skip" is running,
you can make sporatic contacts that can be hundreds or thousands of
miles, but it is not dependable, and there will still be a gap between
your local range and your skip range. In other words you might be making
30 miles local, and 500 miles via skip, but you won't be making the 150
miles that you need to talk home.

> For my truck I'd like to find a really good antenna for my truck and
> replace that coax. I was thinking about (maybe) a 102" whip that the
> instructions say is optimal but I don't know if anyone ever puts those on a
> truck. If not are there any antenna that will significantly improve
> performance.

Conventional wisdom says that the full length 102 whip is optimal, but
is not practical to be mounted on the roof of a truck. Placing it on a
bumper distorts its radiation pattern, and makes it directional. There
are some antenna makers out their that claim that certain exotic designs
are superior to a full length whip (even if they are shorter), and many
support this claim. Just be aware that there is alot of B.S out there
and most claims are highly exaggerated.

> Second, for the base station I'd like that to be legal and have me and my
> wife get our licensees.

No license is required for CB. But if you really want to be "legal" then
get rid of the Superstars. They are most definitely NOT legal CB radios.
They are menat for export use and have frequencies not allocated for the
US CB band

> I noticed some of the people on the upper freq.'s on
> channel "F" used call signs and didn't respond to my calls.

That's because you were on the 10 meter ham band. Hams do not talk to
illegal stations.

> The main reason I want the base totally legal is it's in my home and my wife uses
> it. My CB is mobile and unlikely to be messed with.

If you truly want radio coverage out to 150 miles, then your best bet is
to get the technician ham license, and find a VHF repeater (or 2 or 3)
that covers the area that you want. Unlike CB, VHF bands are pretty
stable, and the range is usually more reliable. There's also less noise
and interference.

> Is this possible? Has anyone ever done this B4? Any help is appreciated. You
> married guys will appreciate that getting wifey involved in our hobby makes
> funding MUCH easier:)
>

Most women are not interested in the same aspects of radio that guys
are. They just want to talk, and not have to "flip this switch and turn
that knob" and get frustrated easily when noise and clowns start in.
They are usually not interested in antenna theory, what radio features
make it "better" etc. The best way to get her interested is to hook her
up with another woman that's also into radio. Of course, having your
woman on the radio opens her up to the endless advances by the tongue
dragging losers that bottom feed on the CB channels. But every once in a
while they may find one of them interesting, and that may be tough for
you to deal with if you're the jealous type.

I thought this is what the ARRL was doing by soliciting reports of illegal CB type activities on 10m, from Hams monitoring the band. I don't think they make the database public, but I think they should. Making public the names of companies, or individuals, who intrude illegally on 10m may go a long way to keep them off the band once they know they are being watched, and the Ham community knows whom to watch. The more they are watched, the quicker the evidence can be collected to get them busted, if they don't voluntarily leave, and stay gone. The same idea can be applied to bootleggers on any of the Hams bands too.

I have seen the CD...the vacuum tube is prettier and without the
smell..Try flourescent and or neon bulbs..very bright and reusable.
Scares the hell out of most unsuspecting people when you say "hey I
forgot about my food, would ya hit the sart button over there for me?"

Hello Ken,

Congrats on your interest in a radio hobby!

Please do you and your wife a favor and consider
getting licensed in the Amateur radio service. You
will be able to talk to your wife legally, the licensing
is very easy, and the 150 mile range is easily achieved.

You can then branch out to HF radio and DX. You mentioned
that on the band "F" of your 3900 the people used call signs
and did not respond to your calls. That was probably legal
operators on the Amateur ten meter band. Illegal operators
on this band are not responded to favorably.

When you are licensed, you will find that there is a great
hobby just waiting for you to explore, and no need to keep
looking over your shoulder for "The FCC man".

Have fun no matter what you decide.

LOL. Good point about all the attractions, Tim. But let's face it....truckers should not be on 10 Meters without a license.

By the way, did I mention the wedding I went to at Astroworld? The park is closed for the winter, but they opened up part of it just for the occasion. The ceremony was held in the Old Dance Hall. The Groom and his attendants each wore a black tux, black Stetson hat, and boots. It looked great!

Then everyone rode the train over to King Arthur's Hall, for the reception. For those who have never been to a Texas wedding, I should explain that BBQ and wedding cake actually DO go well together!

Since I was involved in logistics, I got to spend some time with the Astroworld security guard. I questioned him about their radio system. The place is awesome! Not only do they have 2-way radios, but there are closed-circuit TV cameras everywhere, with a central monitoring point. At one point, I walked away from the group and peered through a chain-link fence. A voice from "nowhere" (hidden speaker), said, "May I help you, Sir?"

I got the Idea from a couple of websites that mentioned lists of
things to (not) put in microwaves. After reading about some of the
things they where nuking I just had to try a tube. I have since
received mails from these two sites requesting permission to post the
"tube trick". http://margo.student.utwente.nl/el/microwave/ and
http://www.bazilians.org/default.html
Oh yeah, as someone from another group pointed out, old tubes contain
lead, selenium, nickel, strontium and other nice stuff that may be
hazardous to your health.

I agree Gary. The freebanders are criminals. And like all criminals they depend on the public ignoring their "petty" crimes. That's why the first thing you will hear out of a bootlegger's mouth when he's confronted is something like, "Why you pickin on me? There's other bigger crimes?".

But in the USA they are soon to be made very unpopular and the distributors that feed them are to be vigorously prosecuted....comode, comode....

One of the problems future adults faceis the idea, perpetuated by idiots like
you CB fags, that it is OK to violate federal law and the rights of others
to have radio spectrum they were allocated. If you assholes would clean out
your own yard and quit preaching your hypocrisy then you would be credible.
Never happen, though.

Where you from, man? ;)
Most non-hams, that I've come accross, have no idea what ham-radio is (that is, beyond the guy 'hunkered' over a telegraph-key most seem to imagine) while most hams know we're just a reflection of the rest of society.. That's especially so if they've ever listened to HF for any length of time...

Dana,

Try to get me a schematic for that tuning unit, and/or tell me how it worked to allow a blind person to use it, and I will see what I can do to help you.

It sounds like it might be a good project for our CB club to work on this summer.

Regards,

Dennis O.

# 2263. Re: Bootleg Operators on 10 Meters

Newsgroup: rec.radio.cb
Date: 2001-02-23 00:08:37 UTC
From: Jerry Oxendine <joxendi@bellsouth.net>
Message-ID: <3A95AA05.780C@bellsouth.net>
Source record: 73944

This is just info, so please don't think I am trying to fan the fire, OK? The legal definition is that an illegal station CANNOT be jammed. A legal station, operating on a frequency to which he is entitled, can talk right over the top of an illegal, or use RTTY, CW, or any mode he is authorized to use. Therefore, no "jamming" occurs since the "boot-leg" station has no business on that frequency and has no "rights" or protection. For example, if I *wanted* to, upon hearing a trucker on 10 meters can send CQ, CQ, CQ DE K4XXX until my hand gets tired. If no one answers me, well....I can't help it. I might even "know" that no one will answer, but if I were "jamming" an illegal operator, he has NO protection against it. After all, is he going to go to FCC and "re-port" me? I can see it now; Mr. Hollingsworth, I was "freebanding" on 10 meters and this ham was "jamming" me!" Guess who gets nailed.

I hope this helps, and none of it is meant to flame. It's just the facts.

Jerry

Thanks,
I appreciate all you and Dave and Gary and Punisha have said. I believe I will find a local club. Theres three I know of. As for the superstar I'll probably keep it but keep to the legal 40 ch's and sidebands. On the other channels I can just listen and there is TONS of morse code talking. Once I learn I can maybe learn better by listening to Morse on it.
My other radio is legal and I bought used for 20 bucks but seems to broadcast wideband. People 10 channels down can hear what I am saying.
I don't think it will be hard to get her interested. Her eyes lit up when I told her about my plans. But I'll go the legit route on this.

## 2267. Regarding EEI and its libel problem...

Newsgroup: rec.radio.cb
Date: 2001-02-23 01:11:31 UTC
From: Snow--Plow@webtv.net
Message-ID: <264-3A95B8C3-185@storefull-136.iap.bryant.webtv.net>
Source record: 74100

Yesterday was my first time in this newsgroup after many, many years. I've been thinking about getting back into CB radio. I was astonished to see a company going through the same situation my company has been through: usenet libel. It's not all that uncommon and there's usually an agenda involved by the parties doing the libelling. It could be political, religious, competitor based or from a former disgruntled employee or customer. It seems this goes on in EVERY hobby newsgroup. I've even seen it in the alt.sewing newsgroup! The best way to combat the problem is to go DIRECTLY to the libelous poster's ISP. DON'T E-MAIL THEM! Look for contact info at the ISP's main website and either send a certified letter or call their legal people. If the problem persists, have your attorney write a legal letter. You can hire a para-legal company's service for about $50 to $150 per letter. Perhaps they can construct a generic letter if you have several harassing posters. This has worked in 99% of my cases. I also have names and addresses of lawyers who specialize in cyber-libel. I'm also aware of self-help books and tapes on the subject. The main problems aren't the news servers. They purge this crap after a few days. It's archive sites like Deja.com. But now that Deja.com has been sold to Google, maybe its time business owners approach Google to put a stop to this usenet sabotage. But EEI, your biggest sign of legitimacy is your acceptance of credit cards. They don't hand these out to just anybody. EXTENSIVE business and personal background checks are performed by these merchant service banks. And BTW, you now have me as a new customer simply because of the harassment you've received. It's called a backlash.

OK...let the BS begin! (Like I'm a "plant" for EEI, this post originated from an EEI employee, that EEI paid me to write this, etc.....)

>Why would you "JAM" them.? I thought that was illegal?

Not so. The truckers are transmitting AM on a frequency designated for CW and RTTY.

Operating in the correct mode, even if AM signals are present, is not illegal--even if it interfers with the AM signals.

QRM

>What is the difference between SSB and AM ????

SSB is just one component of an AM signal. AM is composed
of three parts. The three parts are:

1.The carrier (a single frequency constant power signal).
2. The upper sideband (a power and frequency varying signal
derived from adding the carriers frequency to the audio
frequencies).
3.The lower sideband (a power and frequency varying signal
derived from subtracting the audio frequencies from the carriers
frequency).

Advantage can be had with SSB because you are concentrating
more power for a single purpose. The purpose is to efficiently
transmit intelligence. Yes, this can be done on CB. The process
is explained below.

On A.M. , with a 4 watt carrier at 100% modulation , we have 2 watts
of audio power used for the sidebands. One watt on each sideband. This
duplication of sidebands is not necessary to convey intelligence.

If we use the same transmitter and convert it to DSB ( double
sideband ) by removing the carrier , we can now have 2 watts per
sideband.

If we now remove the other sideband , and concentrate all of
the power into one sideband , we have a 4 watt sideband. With
this method of removing the carrier and one sideband we can
put 4 watts of intelligence out on SSB as compared to 1 watt on
A.M.. This makes a SSB transmission 4 times as powerful as its
A.M. counterpart.

In addition to the above transmitting advantage , the SSB
signal has a receive advantage also.
Since only one sideband is transmitted , only 1/2 the bandwidth
is needed. This means that twice the number of stations could operate
in the same band space as A.M.. In addition to this , because the
bandwidth needed is only 1/2 of A.M. , only 1/2 of the atmospheric
noise is picked up with the signal. This gives you a 3db advantage
over an A.M. receiver.
So when you add it all up you have 6db gain on transmit , and
3db gain on receive. That's effectively 9db of total gain.

About 6 db increase in signal and better spectrum management. :)

25 watts vs 10 watts on most export radios.

SSB has three letters, while AM has only two.

AM stands for "ancient modulation".

(Actually, that's a good question, Sull. I'm just killing time until the technical crowd gets back from watching Survivor. Then they will give you a *real* answer.)

A cabbie picks up a nun. She gets into the cab, and the cab driver won't stop staring at her. She asks him why is he staring and he replies, "I have a question to ask you but I don't want to offend you. She answers, "My dear son, you cannot offend me. When you're as old as I am and have been a nun as long as I have, you get a chance to see and hear just about everything. I'm sure that there's nothing you could say or ask that I would find offensive."

"Well, I've always had a fantasy to have a nun kiss me." She responds, "We'll see what we can do about that. There are two conditions, #1, you have to be a Catholic and #2 you have to be single."

The cab driver is very excited and says, "What luck! I am single and I'm Catholic too!" The nun says "OK, pull over into the next alley."

He does and the nun fulfills his fantasy with a long, wet, deep, juicy kiss.

But when they get back on the road, the cab driver starts crying. "My dear child," said the nun, "why are you crying?" "Forgive me sister, but I have sinned. I lied, and I must confess, I'm married and I'm Jewish."

The nun says, "That's OK, my name is Kevin and I'm on my way to a Halloween party."

news:20010222212459.12840.00001353@ng-fr1.aol.com...
> What is the difference between SSB and AM ????

At the risk of telling you more than you wanted to know -- and probably pissing off some people in the process -- here's the two compared. The short answer, if you do not care to read further, is that SSB is a condensed and processed AM that, like frozen orange juice, keeps the essence and lets you get the water wherever convenient.

In the early days, some bright soul more than likely stole a carbon mike out of a telephone and put it into the cathode of his MOPA (two tubes, Master Oscillator and Power Amp) and said "Audiooooooo". So it was assumed that he was adding information by varying the Amplitude of the signal (see the nice meters move) and it was called Amplitude Modulation. Some still believe it and we are bedeviled by limiter clippers and swing kits.

What is actually happening is that two waveforms, one audio - one at rf, are being mixed. This process requires that one of the two, for practical reasons the rf wins the award, be twice or more the level of the other. So that where this is done, four signals result: A, the so-called carrier or rf signal unchanged by the process, B the audio signal, A+B which is the carrier freq plus the audio frequency, and A-B carrier less the audio. As a practical matter, B disappears in the tank of the power amp and is never seen again but we now have a carrier that doesn't carry anything and two 'sidebands' containing the audio.

Say for a moment you are on Channel 19 (27.185 MHz) on AM with a four watt (rms) carrier and modulate it with two watts (rms) of 1000 Hz tone. You have the original four watts at 27.185 but now have two one-watt signals at 27.184 and 27.186. So AM uses 6 watts to transmit 2 watts of real information. In fact, either one of the sidebands has the information in it so in fact you are using six watts with one of them useful.

So sparing you the gory details, SSB ditches the carrier and loses a sideband. Only the one watt sideband is transmitted, either the upper or lower. Of course, it doesn't stay at one watt for long. It is highly efficient for communication and can be amplified to powers in a linear amp that AM would reduce to a smoking ruin. While it was known in the 30s, SSB got its boost when Generals Lemay and Griswold got it adopted by SAC in the 50s.

So why does any sane human being still run AM? Well, outside of broadcast for reasons of a big installed base of receivers, aircraft where FM would present a safety hazard, and CB they don't. It was outlawed in most

services many years ago and by the military. It has one and only one advantage, it does not need to be tuned by the receiving operator. It is legal in the ham bands but is something of a nostalgia trip.

Now let us talk about how it is received. SSB as transmitted sounds like Donald Duck with a headcold to an AM detector. To make it intelligible it is necessary to put in a reference frequency -- essentially the carrier revisited -- and do the mixing process again, this time throwing out everything but the audio. Because transmitters are never on frequency close enough for audio to come out automatically, it is necessary to set the frequency of the reference oscillator by hand via a 'clarifier' or RIT control that does not affect the transmit tuning; otherwise two SSB stations chase each other up the band because one prefers tinny audio and the other likes it a bit more bassy. So it is probably not the mode for people who have to do other things in their vehicle like stay alive. Without RIT (receive independent tuning) nets or roundtables would be a nightmare.

While frozen concentrate is not fresh-squeezed, it makes pretty good OJ and you are not shipping water all over creation.

There are some unique CB situations with respect to channels and operating practices for which there are better people on the newsgripe to learn from than me.

Hope this made some sense.

Actually, in this case, jamming would be legal. The non-licensed transmissions are illegal, and thus can be ignored and covered by other transmissions. Of course, to be legal, the "jamming" stations would have to identify themselves.

Also, good luck on jamming two truckers running 100+ watts of power while within a few miles of each other.

For the same output power, SSB has a theoretical 9 dB of gain over AM. That means you can talk a lot further with the same power.

On the other hand, tuning on a SSB radio is more critical. You cannot just switch to a channel and expect everyone to sound right - they won't - fine tuning is necessary.

Below you will find the best darned explanation of the differences between
ssb operation and am operation that I think I have ever heard.
Fine job, Dick!

snip

RIT......You have to be kidding. You forget the name of the newsgroup.
CB radios are not even close to being accurate in frequency. You said
this yourself......"Because transmitters are never on frequency"

How could you ever suggest a round table of off frequency transmitters
just use a RIT control to solve the problem and ignore the transmit
frequency error? This won't work. On CB round tables you must have a
way to accurize the transmit frequency to others by some means. The
best way is to tie RX and TX together and then accurize your TX with
your own ear. You do this by the tuning of a received signal of
another accurized enhanced radio.

These accurized radios can also use a RIT. However first and foremost
is getting all the transmitters lined up in a row. Then you can play
with RIT.

>Why would you "JAM" them.? I thought that was illegal?
>Not to mention puerile.

The theory is that since their presence on 10 meters is illegal and therefore officially unrecognized, that it is impossible for any interference with these illegal operators to be considered "jamming." In fact, since these operators don't even belong in the band, there is no interference other than the interference that THEY are causing. I'm not saying I apply to that logic, I'm just saying that is what the common theory on the situation is. Personally, I'm all for stopping the rigs, hauling the drivers of the cabs by their genitals, tying them to the back of their trailers by the power leads of their illegal amplifiers and dragging them down a dry riverbed until their flayed flesh lies strewn behind them as is being picked at by the carrion eaters of the region. THEN we'll turn them into the FCC and let Riley punish them...

1> "...and either send a certified letter or call their legal people. If the problem persists, have your attorney write a legal letter. You can hire a para-legal company's service for about $50 to $150 per letter. Perhaps they can construct a generic letter if you.."
THIS is Not meant to be a troll or flame...just some counterpoints/ideas..First, It is Illegal to use the court system in the US to aid in illegal activity. A drug dealer, for example, can't ask the courts to enforce any "liabel" statutes because someone was bad-mouthing his product or the way he sells it. The company you mention primarily sells items that are Clearly illegal to market & sell in the USA (non-FCC approved CB amps/modified rigs), We ALL may agree that these Federal regs are too severe, or stupid, or whatever, but they are the Current law of the land, & any good lawyer would not only get the Liabel dismissed, but most likely get this company in Extreme hot water pointing out to the feds what they are up to, and I'm sure they don't want that.
2>quote 2- ..."But EEI, your biggest sign of legitimacy is your acceptance of credit cards. They don't hand these out to just anybody. EXTENSIVE business and
personal background checks are..."
This makes no sense??.... Virtually ANYONE that bothers to open a checking account with a Business Name, & fills out a Tax id with their state can be accepting credit cards within 72 hrs. You can run a business from your basement, open a store, sell illegal CB stuff, cut lawns, whatever. There are NO Extesive backround checks, no "waiting periods, beyond having a business checking account. Credit card processors are jumping over each other like used car salesman to sign you up, Believe Me! ..And even so, since when does the mere fact that some business accepts a visa card make you able to tell if they are "good" or not?? I'm sure if you called the Better business bureau or FTC, & found their list of the top 20 "worst" business consumer offenders, surely ALL of them would take your visa card.

Message-ID: <v0bd9tsv7d11ljn4vc0se4604lihro5fv5@4ax.com>
Source record: 74131

Greetings!

They are the same, but very different.

AM signals, as stated by others, produce a carrier, a single frequency. When you modulate it, by using voice or other form of audio based signal - the carrier produces two sidebands. One sideband, has the audio-based information slightly above the frequency of the carrier. The lower tones of voice are located closer to the carrier frequency, with higher tones higher in frequency. Called Upper Sideband, or USB for short.

The frequency and volume, or power level, of the audio, is what generates the sideband. The deviation, or actual band width of the voice content - is the fidelity of the audio information.

The carrier itself is not changed, either in frequency or in power. Carrier is always produced.

The same audio-based information is also produced, like above only slightly lower in frequency. It too contains audio information. However, it is *inverted*. That is, the lower tones are close to the carrier, only slightly lower in frequency. With higher tones lower in frequency to a greater extent.

This process is what makes the standard AM-only CB radio work in todays world.

In SSB, you use the process of Hetrodyning to mix, and then subtract audio information from the frequency you're receiving SSB from.

AM can be decoded that way too, only since you don't produce a carrier for transmit, AM type of radios receive it signal but they don't understand it because the AM signal needs a carrier to detect it.

As you read the above, you'll note that there are three parts to the AM signal, the carrier - always produced, an Upper sideband - contains audio much like a microphone would pick up as an electrical signal, and a Lower sideband - the same as upper sideband, but lower in frequency and it's inverted.

SSB, or Single Side Band, allows you to use only one of the two side bands. Which saves space, narrows bandwidth, lessens receiver noise, and due to the FCC, more power, or Peak Envelope Power can be utilized. You don't waste power producing the carrier, which would be done on an AM-only radio.

The reason why they are the same yet different, is because they use the same spectrum and frequencies, but are encoded and decoded differently. SSB only uses audio-based section of the frequency of interest, and only a narrow portion of it. AM radios produce the same information, only it uses more bandwidth and produces a carrier which must be received on an AM-radio in order to decode the information.

On 23 Feb 2001 02:24:59 GMT, while the modem was ice fishing with the Mouse, bsull2@aol.com (BSull2) dissertated the following:

:+> What is the difference between SSB and AM ????

Ah, but any transmissions by licensed operators on the ham bands must be identified within the guidelines set by the FCC (once every 10 minutes and at the end of the contact).

and the kiddo CBer is scared shitless - "wow, we can't keep the hams out of
our precious rec-radio-cb" - so it goes, boys.
What was the point in setting up a commie-style ng in the first place,
anyway?
Let's talk about CB or ham radio and cut the illegal crap.

Gary, oh8mfh
friend of legal radio

Special announcement about the 3 special kids!
Folks, you need the following book...Twistie, tnom and Scottiekins have,
with adult supervision, drooled into a dictaphone the following masterpiece
of authorship and it is now available at your local book store...Don't miss
"Muskrat Love", the heartwarming story of 3 illegal CB'ers who find love
and marriage through uniting in hatred for N8WWM, the mean 'ole hammie they
wish they were 1% equal to in quality of flame issues.
While their Sparkomatic and 2 pill amp combo splashes all 40 channels and
into 10
meters, listen to the 3 sweet little CB'ers plot, plan and generally scheme
to out flame the greatest flamer of all time. Read about their use of electronic
components as aids to their sagging libido's. Learn why no female relatives
ever come to visit. Look at the special 13 page photo insert that shows the
dried snot on their microphone! This and much, much more.

Folks, this book is on par with the smash hit "I am faithful to my wife",
by Bill Clinton, and will become recognized as a major literary accomplishment.
The trippin' trio have outdone themselves this time, and you have just gotta
read it to
believe it. Only 29.95 now at your local bookstore!

I guess I'll join the bandwagon . . .

On 23 Feb 2001 02:24:59 GMT, bsull2@aol.com (BSull2) wrote:

>What is the difference between SSB and AM ????

SSB is 83% more efficient than AM, which means your 12 legal watts can do the same job as 70 watts AM (don't flame my math - the concept is correct). The audio is cleaner, and twice as many channels are available than AM. The radio guts are more complicated so the tranceivers cost more. And the operator has one more knob to adjust. That about covers it.

So why even bother to use AM? Because only some CBers have an SSB tranceiver, but all of them have AM.

Sparky, FLRC

Some DX clubs on the net use numbers as call signs, and they are just
like handles. It's best not to use a number unless you are a member of
one of those clubs - they tend to get pissy if you pick the same
number as someone else.

>I sure don't want to get into a conversation with some queer boy and not

>What is the difference between SSB and AM ????
>
>

That's an excellent question. Perhaps it would help if you knew how SSB came about.

(1) Several decades ago, it was discovered that when listening to AM, one could reduce the effects of "fading" by turning on the BFO (the part of the radio used to make CW signals audible) to zero beat the signal.

(2) So some sharp guys decided to see if they could reduce the ratio of carrier to sidebands to save transmit power. The carrier was reinforced at the receiver by using the BFO.

(3) It worked so well that somebody said, "Do we need the carrier at all? What if we just transmit the sidebands and let the receiver insert the carrier?"

(4) When that proved successful, someone pointed out that since the sidebands are mirror images of each other, perhaps only one was needed to convey information. And it worked.

(5) So somebody said, "Well, if we're only using the UPPER sideband, could something be transmitted independently on the LOWER sideband at the same time. Guess what? That also worked.

(6) But numerous folks pointed out that it was difficult to keep the radios in "tune". Vibration, temperature changes, and other factors meant that the receiving operator had to constantly change his frequency setting to avoid speech sounding like Donald Duck.

(7) About this time, folks were shifting away from separate receivers and transmitters. Transceivers were becoming popular. This created a new problem: I adjust my dial to improve reception. This shifts my transmit frequency (as well as the receive frequency). So you have to adjust your frequency to compensate for my new frequency. Then I have to adjust to compensate for your compensation. The next thing you know....we have "walked" out of the band and we get a nastygram from the FCC.

(8) Collins Radio solved problem 6 by designing a VFO which always operated on the stable frequency of 5 MHz, even when the receiver/transmitter was working at 28 MHz. This, along with temperature-compensated components in the frequency-determining circuits, produced equipment which could be set accurately and which would remain "on frequency", even under severe conditions.

(9) Back to problem 7. The fix was easy. Radio manufacturers began including a RIT control which would "tweak" the receiver frequency without distrubing the transmitted frequency.

(10) Type-accepted CB equipment uses even more advanced frequency-determining circuits. Type-accepted radios for CB are "channelized", rather than being "continuously tuned" like Amateur gear. With the RIT control, it makes it simple to carry on conversations on SSB. And, since all the talk power is in one sideband, instead of being spread among two sidebands and a power-hungry carrier wave, you get much better performance on SSB, comparing watt for watt with AM.

Even more important to CB operators is that sideband DOUBLES THE NUMBER OF AVAILABLE CHANNELS! I can be on channel 38 LSB talking with you, and Ice Cold can be cracking his jokes on 38 USB. There will be no interference between LSB and USB. (Whether you feel that Ice Cold should be given a clear channel for telling jokes is a matter of individual taste--grin).

Amateur operators employ a different technique for conserving spectrum space and reducing interference. On 7 MHz and below, the standard practice is to use LSB. On higher bands, the convention is USB. This produces an ecomony similar to angled parking spaces.

Source record: 73960

>I am just wondering if the 10M Radio Shack HTX-1000 is modifiable to work on
>11m.

Sorry, speedy. Bad news.

(1) There is no known modification. And the manufacturer went to great lengths to prevent this.

(2) If it were possible, the performance of the radio would be dismal. It is designed for 10 meters, with rejection circuits for other frequencies. This makes it an interference-free radio for Amateur frequencies. One of the characteristics of Radio Shack Amateur equipment is being immune to "intermod" and non-amateur signals.

(3) The radio is not legal for use on CB. This is an FCC issue which has nothing to do with potential modifications. If you have been reading this NG for any length of time, you will understand the reason for type acceptance. CB operators do not have to pass any tests, which means that a person need not know anything about frequency bands/assignments. Therefore, CB equipment operates on fixed "channels". The HTX series uses a VFO, which makes it illegal on CB. Granted, many folks ignore this, but you are seeing more and more of them get into trouble by straying into Amateur bands and getting slapped.

Welcome, Rick! Hope you enjoy using your CB.

There are two kinds of numbers in use. One is used to indicate membership in a CB radio club. These numbers are assigned by the club secretary. However, some numbers are "made up" by the operator and have no significance. (Have you met QRM2000?)

Another kind of number developed from various operating signals, such as those used by law enforcement personnel and ham operators. Samples:

73. Old telegraph signal for "Best Regards".
88. Ditto, for "Hugs and Kisses". (Use with care!)

10-4. Watch some old police shows and you'll grasp the meaning. Loosly translated, it means, "OK". When drawn out, it means, "I hear you and totally agree", as in "Tennnnnn Fourrrrr on the short skirt in the red convertible!"

Forty-two. Similar to 10-4.

"Numbers to ya". See "73".

Hope this helps. Numbers to ya.

Simple to carry on a conversation? Maybe with just two operators, but not with many operators. CB radios do not have accurate or stabile transmitters so that hardy anyone will ever be on the same frequency. With a stock RIT operated radio you would walk up AND down the band continually if you tried to tune in each different operator in a round table.. Hardly a simple or enjoyable way to operate a radio.

A much better and simpler way would be to eliminate the possibility of having separate TX and RX. Just like amateurs did when going from separate transmitters and receivers with the introduction of transceivers. This tying virtually guarantees all members of the group will be able to tune to the same frequency. The exact frequency is unimportant as long as it is constant among all operators.

As far as chasing someone up the band......If the radios are tied properly and the operator have good ears then there is no chasing. If one radio is off, or someone has a bad ear, then some chasing may go on. But even this chasing is preferred over the other type of chasing. Namely the chasing that goes on with stock radios every time a different operator keys up in a round table. Up and down, up and down.....

QRM,

I believe the "clearinghouse" you suggest already exists. I found the
following address on rec.radio.amateur.policy:

hamband-intruders@yahoogroups.com

They are asking hams to monitor the various 10 meter freqs that end with
"5" up to 29.265. Send as much info as possible. Actual sightings
of bootleg truckers should be recorded on tape with license tags and
company names, phone#s--all info that can be collected--and sent to FCC.

SO??? What is so hard about CQ, CQ, CQ, CQ, CQ de K4XXX. And I would "jam" hell out of 'em if I thought it would do any good! But it won't. For the lack of a better approach known to me at this time, I can see the time coming when the exclusion for truckers lobbied for by their Associations regarding local enforcement will be REVOKED! It *could* come to the dreaded inspections at truck stops and weight stations that they worked so hard to prevent! It would be a shame for it to come to that--all their hard work for nothing. But a minority of truckers are bringing such enforcement upon themselves and their legal comrades. It would be a shame.

>With a stock RIT operated radio you would walk up AND down the band
>continually if you tried to tune in each different operator in a round
>table.. Hardly a simple or enjoyable way to operate a radio.

I disagree. It has been my experience that with RIT, you simply adjust your local control to clean up the speech. Your transmit frequency remains constant. Nobody is "chasing" anyone else.

In groups of more than two, the normal operating method is for everyone to set RIT to zero or off. People "talk" each other onto the correct frequency. "Charlie, you're still a little low. Adjust to the group."

Occasionally, there is a station which, for one reason or another, does not transmit and receive exactly on the same frequency. In that case, everyone else uses his/her local RIT control to compensate when that one station transmits. However, a better solution is for the group to talk the one oddball on frequency, and the oddball uses *his* RIT to tune in the group.

This is difficult to describe in writing, but it is easily mastered when one gets a SSB radio and joins a group.

Other posts did not address one important aspect of SSB: In many (or most) parts of the USA, stations employing SSB stay on the upper five channels. It is helpful if AM stations remain on Channel 34 or below. This is a voluntary band plan which enhances the usefulness of CB radio.

If you are just getting started with SSB, it pays to listen for a while before jumping in. Besides giving you practice tuning signals for the most natural sounding speech, it will allow you to pick up on some subtle differences between AM and SSB operators.

For instance, SSB tends to be like a natural conversation. Transmissions are short and the exchanges are much quicker. Part of this results from using VOX. Another difference is that SSB operators tend to use actual first names rather than "handles". You'll also find, in many cases, they know each other personally. In other words, there is more of a "fellowship" aspect to SSB than ragchewing with strangers on AM.

One other tip that I have not heard mentioned: Never use a Roger Beep when operating in the SSB mode. You'll understand why the first time you hear it--especially if the operator is using VOX.

> Nobody is "chasing" anyone else.

Your transmit frequency along with everyone else will not stay
constant. That is the problem. The involved transmitters are not
together or constant. This is normal in CB radios. They operate at 20
degrees, at 72 degrees, or at 100 degrees by someone long on the key.
Not to mention different frequency standards to begin with. And don't
forget no frequency compensating parts. This all adds up to everyone
having a good chance on being on a different frequency. When everyone
is on a different frequency then everyone is more likely to find
someone to chase. Period.

>In groups of more than two, the normal operating method is for everyone to set
>RIT to zero or off. People "talk" each other onto the correct frequency.
>"Charlie, you're still a little low. Adjust to the group."

"Charlie, you're still a little low. Adjust to the group." is
unnecessary and time consuming. When operating a radio one
object is to limit the steps needed to enter a roundtable. If you had,
and everyone else had a tied TX and RX, then all one would have to
do is adjust ones receive to the group and your TX would be right
their with everyone else. No extra interaction necessary.

>Occasionally, there is a station which, for one reason or another, does not

>on frequency, and the oddball uses *his* RIT to tune in the group.
snip

Or better yet have the oddball align TX and RX together and make it
movable with the clarifier.

We have gone over this before. The frequencies ARE stable, just not precisely on the center of the band.

But all this can be compensated for, if the people in the discussion know what they are doing. I have been in round table discussions with up to about a dozen people, where no one has to touch their tuning once they are tuned in. Of course, this require variable transmit frequency, which is not allowed on a legal CB radio.

: A much better and simpler way would be to eliminate the possibility of
: having separate TX and RX. Just like amateurs did when going from

Hams have separate TX and RX. They have the VFO which controls the transmit frequency and the approximate receive frequency. RIT or other methods of receive tuning take care of the matching.

Lock the RX to a fixed offset from the TX, and you will find everyone doing just what is undesireable - trapsing up and down the band trying to get the voices to sound as they want them to sound.

It is important that everyone transmit on the same frequency, true. But the receive tuning is a matter of personal taste.

There is absolutely nothing wrong with running legal. The frequent poster's of this newsgroup had never intended or ever tried degrading individuals who run their radio equipment within the boundaries of Part 97 FCC Regulation. The only information that were passed back and forth were information of upgrades of RF electronic devices, coax discussions and antenna designs by HAMs and CB Radio enthusiasts. And its information only. A small contingent of "flamers" decided to go on a crusade to "Punish Illegal Faggot Keyclowns" (which I still don't understand what a keyclown is...), or the high performance CB operators. I myself have been "sandbagging" for a couple of months and have seen nothing but immature conversations of individuals throwing every despicable type of comment back and forth to each other. KILL FILE is the program of choice here.

I, myself, also run my equipment well within the parameters of Part 97. But the informational discussions was what I was so intrigued with when I first subscribed to this newsgroup. Anything from linear amplifiers to the type of soldering techniques most technicians have were discussed. It was great. Although you have the Newgroup RF Police every now and then telling others here what they can and cannot post. They were dealt with in a few long threads but nothing else; until August of last year (or maybe longer than that). But anyways, I was quite impressed by the technical data by both CBers and HAMs alike through these discussions. And I've learnt alot in the past couple of years than in all my years as a CBer and former HAM operator.

Anywho... you decide. KILL FILE the idiotic posts and learn or post your opinions to any of the technical threads. It'll be alright. Like my sons would say... "Dad? Its all good..."

Source record: 73978

You dont need a manual brotherman, run a short jumper from the radio to the input side of the TVI filter and attach the antenna coax to the output.
Find out which channels on your TV are being affected by the unwanted harmonics.
Adjust the filter while holding deadkey until the interference is gone or minimized .
Try not to run the coax for your radio parallel with any other cables,if you have
to cross another cable do so at a 90degree angle.
Harmonics are multiples of the transmitted
frequency,:27.185x2x3x4x5x6etc.etc.

That's where RIT comes in.......just change your receive so that you can hear the
one that's off, as opposed to changing your transmit as well.

You are right on target with this response! If all the screwdriver experts would stop unlocking the clarifiers on their radios, things would work much better. Sure, it's nice to be able to slide, but if you find this a requirement, buy a radio with a vfo. And for heavens sake, don't make the RIT move your transmit! There are way to many 2950 and 2510s that people have butchered in this manner.

I am going to admit some inexperience here and ask a question. A clarifier simply introduces a little error voltage on the PLL so that it tunes slightly differently on transmit and receive. I assume the voltage is derived from the receive bus so that it goes back to the preset on transmit.

It does not seem to me to be a monumental problem to build an external black box that would slide the tuning up or down five and retain the clarifier in pristine condition. Yes, you would have to shield it well to keep your fluorescent lites from introducing FM and yes the PLL might begin to wonder just how many sources of error voltage it is expected to recognize and yes there may be an isolation problem. It still doesn't seem all that monumental.

Has anyone built what amounts to a VFO for these rigs???

But what happens when you are talking to two or more operators who
because of a fixed transmits, are on different frequencies? You would
end up tuning each and every time a different person transmits

Thanks for suggesting a radio with a vfo. This is the best bet. And if
you want you can also make your CB radio into that same radio with
that same VFO capabilities. Just do the mod correctly and it will
work just fine.

## 2361. A Burnt Sidewinder

Newsgroup: rec.radio.cb

I turned on my Eagle Sidewinder 400 and smoke started coming from it. I unhooked it and looked inside and found that a black thing toward the back of the radio, it's black with a little coil wound around it burned up. Anybody else had this problem? Anybody know what the black thing is called and how much am I looking at paying to get it fixed. Is it worth getting fixed (It burned pretty bad and the radio smells burnt). I asked because I'm thinking about going to another radio.
Thanks to all who reply.

None of the transmitters are going to be exactly the same, nor are they all going to be perfectly aligned in respect to receive and transmit. That is inherent with SSB. That is the reason for RIT, or a clarifier. Look at any high quality rig(Kenwood, Icom, Yeasu, etc) They all have RIT. When talking with several stations, you get as close as possible, then you use the RIT.

Sorry guy....as much as we would like to believe otherwise, it's not a perfect world.

# 2371. Thanks and Good Bye re. 11m, Tech Ticket, & The ARRL.

Newsgroup: rec.radio.cb
Date: 2001-02-24 18:59:17 UTC
From: radiohead11m@aol.com
Message-ID: <20010224135917.21814.00002535@ng-cr1.aol.com>
Source record: 74001

Hello Everybody,

I just want to say a heartfelt thank you to all who responded, both positively and negatively, re. the idea of 11 meter operators becoming licensed amateurs and joining the ARRL. I spoke with quite a few licensed amateurs as well as fellow 11 meter operators in and about my local area of Northeastern NJ, before posting this idea on a "few" internet forums. I wanted to get a better "feel" for how well this idea would be received by both amateurs and 11 meter operators. I'm pleased to say that the verbal responses appear to closely match those of you who posted on the forums. Even more encouraging, however, is the almost overwhelming number of e-mails from 11 meter operators who "sandbag" the ham forums. Many expressed the same desire I once had when I visited various ham sites, to learn more about amateur radio, and gauge how they themselves would be received coming from a much maligned portion of the RF spectrum. Granted, there are a great many dunder headed lids on 11 meters, however, they are NOT the majority, as is the popular belief. The, often unprovoked, animosity felt by many 11 meter operators has resulted in a polarizing effect that just amplifies the "us vs. them" mentality.

This honestly breaks my heart, I feel the majority of us have one overriding factor in common, the love of radio. We may disagree on some points, but if we can step back and concentrate on what we DO have in common, there's NO disagreement that cannot be defeated by compromise. My college debate professor taught me that even a "technically" flawed argument can often "hold it's own" against a "more righteous ideal" if it is delivered within thoughtful discourse and with civility. Thank you Dr. ("Don't call me professor!") Witkowski. Becoming a licensed amateur in order to gain ARRL voting privileges may not hold "idealistic" water, but sometimes the path to justice must cross a non-idealistic road or two.

The fact that I was able to reach so many people who did NOT post their responses, but rather quietly expressed their thanks for saying a word or two in their favor is extremely encouraging. The recurring theme has been that they now understand that they have the option of gaining a silent voice via an e-mail and subsequently on an ARRL election ballot rather than risk public ridicule on an Internet forum. These are the souls I especially wanted to reach. At last count there are several hundred 11 meter related Internet sites as well as amateur radio related forums. You will now see this proposal posted on each one. I don't mind if they get flamed or trolled, it's the silent reader who will "count" in the end. If all these souls do nothing… well, that's ok too, just as long as they know that the opportunity exists. Judging from the reactions I've seen, that's a long shot, but you never know.

Lastly, I want to encourage all of you to be kind to each other here. I see people nit-picking over the smallest details, throwing petty verbal digs at one

another, and generally posting some pretty mean spirited things. I'll tell you something that's really no secret, I love radio…and as a result I can honestly say I love you all too because, deep down, I know we share the same love of radio. Our involvement in radio may take on various different forms and we may not agree on some of the technical or political aspects, but we all love it to one degree or another. If we rise above our differences and concentrate on our commonality, we can cooperate to help, or curtail, the minority of lids (and they really ARE the minority - in both camps) that make radio unpleasant at times. You didn't read my word incorrectly, I love you all…ARO's, 11 meter operators, SWL's, (My father's forte) etc. and I want you to really think about whether any issue is "that important" before you click the 'Send' button on a post that could cause hard feelings. Take care, we may work each other someday…or we may have already.;-) Good luck in all you do and may you find the winds favorable, wherever your journey may be to. 73.

Sincerely,

Mark

Why would any sane human being want to??

There is no way to get more than 2 watts of audio on a 4 watt carrier, period. Certainly not if all you are armed with is a pair of wire cutters.

The limiter not only keeps the crap level down, it actually helps the communication 'punch' of an AM signal. Leave it the hell alone.

>be perfectly aligned in respect to receive and transmit.

There is no problem aligning one transceivers RX to TX. This is done
successfully all the time.

>That is inherent with SSB.
>That is the reason for RIT, or a clarifier. Look at any high quality rig(Kenwood,
>Icom, Yeasu, etc) They all have RIT. When talking with several stations, you get as
>close as possible, then you use the RIT.

I'm looking.....The RIT control is hardly ever used because all
of these rigs have their TX and RX aligned.

>Sorry guy....as much as we would like to believe otherwise, it's not a perfect world.

All I have to say is this. If you want to enter a roundtable that I am
involved in, and can't land your own plane, then don't expect me to
land it for you.

A CB radio without a movable TX is like a plane without a steering
wheel. A CB radio without a tied TX and RX is like a plane with a
steering wheel, but without any direction indicators.Coupling the TX
to the RX allows you to guide your TX to the correct heading..
Otherwise you are totally blind. And if you are totally blind you
shouldn't be flying in the first place.

I agree with Richard. It will sound worse. Buy a linear or modulator before you go cutting limiters. Your radio will last longer.

Those things are a pain. I have never seen a manual, but what I have been told is that the trimmers that are marked 2-3-4, 4-5-6, and 7UP are to tune out the respective TV channels. I have tried this and it seems to work. Adjusting the three marked SWR is a hit-or-miss deal.

>these modifications do ?????

They usually ruin a perfectly good radio. This comes from many years
of repairing them, and seeing that most of these 'mods' are done by
idiots with arcwelders.

- Channel mods and 'jump switches' will get you more channels than the
legal 40, both below and above the CB band - even the 10meter ham
band.

- Power mods, or 'tweaking', gets your radio to output more RF than
the legal limit. If tweaked too far you can clip the RF, which causes
interference on other channels as well as the television. It can also
burn out your final.

- Modulation mods, or 'snipping the limiter', allow your radio to
modulate greater than 100%. This is mistakenly believed to increase
your power, but ends up distorting your audio and splattering your RF
into adjacent channels.

Source record: 74021

Oh I don't know...

The HTX-100 COULD be modified for 11M operation, at least one 'pass' could be. Others, depending on production date, couldn't.

And the HTX-404 could be modified. It took a rather complicated key sequence, but it could be done.

And the HTX-242, one resistor cut and it transmits CAP, another and if it can hear it, it can talk it... Although there is a key sequence to enable CAP transmit too.

And the HTX-204 I was told has a 'key' sequence to open it all up...

> these modifications do ?????

Again at the risk of telling you more than you wanted to know about
MODulation kits and pissing people off in the process, stay away from them
like they had a social disease.

The nature of the mixing process, whether it takes place in a transmitter
stage as in this case or in the front-end mixer or product detector in a
SSB receiver, requires that the reference signal aka the carrier in this
case be at least twice the sum of everything else present. If it is not,
significant distortion occurs and spurious crap is generated but no more
audio results. It simply is not possible to get more than 1/4 of carrier
power into a sideband by ordinary means.
No matter what anyone tells you, AM does not in any way, shape, or form
modulate a carrier or change its amplitude, it adds sidebands that will
vary output from 100% up to 150% of carrier power; anything additional is
spurious crap.

This has not always been accepted truth. For those people, particularly
when AM was the state of the art in the late 30s, the idea of Taylor or
Super-Modulation arose and it enjoyed a period or two of mild popularity
until it was shown to be a mess of condensed kraut. In essence, they cut
back the carrier power, say to 2 watts and used audio to either control
the power to the final amp or power it directly so that on peaks it would
show something like 10. They would point to 2 watts with no audio
(sometimes called 'deadkey') and 10 watts on audio peaks and go 'naner,
naner, naner I got 8 watts of audio on a 2 watt carrier'. You may hear
this called 'swing' or 'swang' among those priding themselves on
illiteracy. It does sound louder -- for no better reason than the
swinging carrier confuses the crap out of a receiver's Automatic Volume
Control (AVC, the old name) or Automatic Gain Control (AGC, the new name).

What is, of course, happening is that some of the audio goes to increase
the carrier level to the more normal 4-6 watts which gets mixed with the
2-3 watts of audio plus 1-3 watts of crap that serves no purpose

whatsoever. And you are left with a swingy AM that gets assassinated in every pile-up where it can't diddle the receiver. It is unpleasant to listen to and generally causes your friends to treat you like you had BO.

The long and short is that it is a miracle of 1950 technology that accomplishes not a thing you want accomplished and several things you do not want.

These modified messes show up on E-Bay because they have no resale value and the owner wants to get his money out to do it right. As far as the other stuff, I will let others tell you of them.

Dick

Source record: 74023

>
>BLAH,BLAH,BLAH ! What is the difference between a No-Code these days and an
>unregistered operator ? NOTHING ! except a piece of paper !
>
>

Obviously, you are correct. However, that piece of paper makes a big
difference if you wish to operate in the Amateur bands.

If your only interest is CB, who cares about the piece of paper? Nobody. Just
keep your radio out of the ham bands and everyone will get along fine.

Hams could care less if your equipment is legal, illegal, overpowered, distored
modulation.....etc, etc., etc. Enjoy it. Just remember, once you "cross the
border", you're on the hams' turf and are subject to getting attention you'd
rather not have.

The story doesn't change:
If you keep your mess in the CB band and don't annoy the neighbors, you
probably can escape notice.

It's the outlaws that are bringing down the heat on everybody else. If it had
not been for them, people would have forgotten about CB. That law about local
police powers would never have been proposed, let alone passed. There would not
be an outcry about amplifiers and export radios. Now every CB operator is
subject to
a potentially dangerous reaction from local law enforcement officers.
Amplifiers are being pulled from e-bay, websites, warehouses, etc. Everyone is
looking at the export radio pipeline, too. Why? Because the outlaws waved all
this in people's faces and announced that they "would do whatever they want and
nobody could stop 'em."

What's really strange is that the rest of the CB world DEFENDS these pukes! Go
figure.....

You can buy the whip part at Radio Shack but don't buy the ball mount
and spring from them! Their ball mount is complete junk made out of
pot metal and the threads pull out and strip real easy. I recomment
the Hustler brand ball and spring, which you can mail order from
www.aesham.com .

"Mud" is radio slang for STATIC. A "mudduck" is an operator that does not have enough of a signal to get over the static of the frequency.

I know how you feel about the individuals here who jump your posting if you're one of legal character. But if you recall, Mr. Punisher, the people who had gotten jumped instigated the argument anyway; and vice versa.

I'm not saying to turn a blind eye to it all, but don't escalate a situation here on the Newsgroup if the posting is straight WORDS. If you have Reasonable Suspicion that the individuals DO run illegal equipment, then notify the nearest FCC Field Office near the illegal operator. That way the FCC Field Officials can gather enough evidence to suffice Probable Cause and issue a citation and/or fine to the Station operator.

Keep it professional. This newsgroup is a forum of information and opinions. And you know what they say about opinions, right? "Opinions are like SHIT. Everybody's got one, and they all stink!" But they are information and opinions no matter how you look at it. Nothing more, nothing less.

So, if at all possible, and you don't even need to appoligize to anyone of them, throttle back a little on the "thrashing". I liked it better when you and the others hashed it out with each other here on the NG with words of wit. It was quite funny, then...

# 2400. Re: Honor the Outlaws? (was: HTX conversion)

Newsgroup: rec.radio.cb
Date: 2001-02-25 01:57:29 UTC
From: Jerry Oxendine <joxendi@bellsouth.net>
Message-ID: <3A986689.267A@bellsouth.net>
Source record: 74029

QRM,

As I posted previously, the "support" for renegade or "outlaw" operators *may* have an unintended result. Those truckers who are now operating well within the Amateur 10 meter band could cause Congress to reconsider the exemption lobbied for and granted as to the local enforce ment issue. It could cause legislation to allow state DOT agencies, for example, to include compliance with FCC regulations as part of their regular inspections. I don't think they would want that, but if the in- cursions into other bands continue and expand, then there is surely some thing going to be done. Not only that, it might cause a "backlash" on "freebanders" by bringing attention to ALL illegal operations as well. The first thing I believe will be done is for FCC, or *some* entity, to contact trucking companies and explain that such illegal activity is occurring and ask that their drivers be brought into compliance. Then companies who use independent truckers *could* be asked to do the same thing. Then contact may be established with Truckers' Associations ask- ing them to publish articles in periodicals and monthly magazines ex- plaining the penalties involved. I don't know if this will work, but I hear it being discussed both on and off the 'net. There is an internet group called "Hamband_Intruders" that is collecting data and studying ways to get this stopped. Being that I operate CB and ham, I know that there are a lot of pissed off hams over this. They don't care about the high-side "freebanders", but they'd like to see some butt kicked over the 10 meter issue. You can include me in that group. LOL!

Lots of CBers are ticked over the denial of the Petition that was submitted last year regarding the 155 mile rule. Unfortunately, when any group gets renegades--and the public DOES see unlicensed people as such whether we like it or not--it reflects badly for the whole group. The public often calls ham radios CBs--not that it is, but they often think of ALL radios as a "CB". Therefore, when such an issue such as the 10 meter thing comes up, it bodes ill for favorable rulings in regulatory matters, i.e., relaxing a particular restriction. As long as there's amps, freebanding, and "straying" outside the 40 channels, the CB Ser- vice will NEVER get any concessions. Likely, the 155 mile petition was dead before it reached FCC simply because of these issues--at least, in part. Just my nickel.

# 2401. Problem with Export Radios

Newsgroup: rec.radio.cb
Date: 2001-02-25 02:05:00 UTC
From: h <not@aol.com>
Message-ID: <t9gptuhdvvv4d6@corp.supernews.com>
Source record: 74030

One problem with export radios is that once you start trying to massively crack down what will be the result?
If the FCC would just allocate 3 or 4 mhz say from 26 to 29mhz or 24 to 27mhz so what. Heck most of the cb activity is around 27mhz. Go to 28mhz all I have heard with 1 or 2 exceptions is Morse and Spanish.
FCC starts with trying to play hardball with the export distributors guess what? the Big Radio guys will sell legal Ham stuff. And with no license they are perfectly legal unless you key up and say AAUUDDIIOOOO! Imagine 50,000 hairy uneducated truckers with Kenwoods and ICOMS saying "Baba Boieee" and WAASSUUUPPPP!" and trying to access repeaters to look for Lot Lizards.
Like Art Bell said" If you transmit without a license it's like shining a flashlight in a dark room". What's the FCC gonna do with 50,000 flashlights?
During the 70's military style guns were very few and rare and sought only by collectors. Politicians were going nuts trying to get rid of "Saturday Night Specials". The firearm equivalent of a 1 watt handheld. Today Saturday Night Specials are almost eradicated. They have been replaced by AK-47's
Heck allocate 2 or 1 mhz to 4 watt radios and another 2 mhz to whatever and don't let your stuff bleed over and use what is called containment. A 4 watt CB in NYC is almost useless. I would get stepped on while talking to a truck 30 ft away! In the boonies its a different story. The worst ones are the second hand ones that have been "peaked and tuned" by maybe 5 different people. Trust me the broadcast broadband to about 10 channels at once
Just my thoughts

# 2404. Re: new 2950 DX

Newsgroup: rec.radio.cb
Date: 2001-02-25 02:25:52 UTC
From: cf NI4L <cfox007@bellsouth.net>
Message-ID: <3A986D2F.898FAB32@bellsouth.net>
Source record: 74035

I was sent this email from a visitor to my site, enjoy.

I have news on the rci 2950 dx. the way you convert the channels is that
there is a jumper in the bag with the mic clip, you add
that jumper to the block behind the face plate, put it on the pins on
the right hand side, only one jumper and you will get
24.000-32.000 !

There is nothing to clip in this radio for mod. just turn up the one on
the inside that says modulation. Everthing is marked on the
inside by name, am power, ssb power, and any other power. If tuned right
it will key 3 watts and swing to 35 watts, thank you
Joe L.

The EPT695010z board can be modified in the way described.

UPDATE

The radios with the board number EPT695011z, which some people say
aren't able to be modified can be, but only with a
frequency expansion module.

The only place I have found offering them is Panther Electronics.
Using this module and the jumper in the way described will result in
freq. coverage from 21.000MHZ to the top of the 10
meter band.
Without the jumper, the radio will cover 24-32MHz.

I use a PC-122 and a TRC-451 (Cobra 146) that are uncut and I use
non-amplified mics on them. I always get great reports about the audio.

There are better ways to modify a radio then cutting a clipper.

I, for one, can't stand distortion on my stereo or my CB.

Distortion does not equal loudness.

Since my transmit frequency is set perfect on my radios, it is not necessary to cut my clarifier to talk on sideband. All 40, upper and lower side is right on. Just set your clarifier to 12 o'clock.

I have uncut limiters and uncut clarifiers. I never have a problem in a roundtable. Are you just lazy, and can't tweak your knob? Is your ear out of tune and can't understand when it is slightly off? <g>

Every time this issue comes up, you can't stand to hear the other guys' point. Yours is the only "right way". I respectfully disagree.

: A lot of folks mentioned SingleSideband. If anyone has a chance, could someone
: please explain what that means, or where I could go to get info on it myself?
: Is it something a lot of people get interested in?

In a properly modulated AM signal, there is a carrier, an upper sideband and a lower sideband. The upper and lower sidebands are mirror images of each other. The carrier contains 50% of the transmit power, with the other 50% being split between the sidebands - e.g. 25% each.

In an AM radio, both the carrier and one of the sidebands are needed to retrieve the audio information. The second sideband is totally unnecessary. Unfortunately, most of the carrier is not needed either. This all makes AM rather inefficient. Also, if more than one person is transmitting at the same time, the carriers "beat" against each other - creating heterodynes (whistles). These whistles can make it difficult or impossible to hear the person you want to hear - and are plain annoying even if they don't really interfere.

In a SSB radio, the carrier and one sideband are eliminated before the rf signal is transmitted. This means that 100% of the power can go into the one sideband carrying all the useful audio information. At the receiver, a BFO (beat frequency oscillator) is used to reproduce enough of the "carrier" that the signal can be recovered. The negative part of this system is that the frequency tuning is more critical.

For a more thorough discussion of the subject, go to your local library and check out any edition of the Radio Amateur's Handbook. It is a wealth of useful information.

Source record: 74043

Greetings!

Yes, the clarifier does use the voltage from the RX side to generate
the offset needed by the PLL to subtract the audio.

When in TX mode, the use of diodes for switching the reference line to
bypass the PLL and use the internal trim pot is done.

The problem lies in the voltage present in the TX, versus the RX, if
both are slightly off to the PLL - the mixer will work at a different
frequency. In TX mode, it doesn't care what the clarifier is set for,
it's bypassed. Hence the problem of TX'ing where you're RX'ing is not
going to be the same at all temperatures or humidity levels.

My biggest beef with people the unlock the clarifier, is the lack of
use for the diodes. They jumper them, which to me is a no-no. The
diodes not only block DC routing for voltage reference, but also
provide some temperature compensation.

People that don't "unlock" the clarifier properly, wind up TX all over
the place.

Numerous reasons for that, but the key points are; exceeding the
impedance level the PLL will tune for in the VCO section, and no
temperature stability or compensation.

The internal trip pot will have a different response to temperature
and humidity versus the clarifier. Since we are dealing with two
different reference calibration points with their own support
components, one internal and one external wiper control - the drift
problem is amplified and you get frustrated operators.

Combining the two into a single unit, lessens the unpredictability and
change that will occur when using two separate voltage references.

Unlocking the clarifier is basically tying the VFO to the external
control instead of two different controls.

That is, if it's done properly.

Source record: 74052

Greetings!

Ask yourself - if this is such a good radio, then why are they selling it?

I get such a kick out of "NIB" [new in box] with all mods for extra channels, slide and modulation. How in the H*LL can someone say it's NIB when the "mods" have been done? I don't think we're talking factory here...

Last reason? Hopefully to upgrade.

If not, <begin shudder> then you might want to re-think about placing a bid on the radio. <end shudder>

Mods? Well, if they haven't re-done the radio to stock, and they have "Talkback" - or the operator can hear their audio thru the internal speaker of the radio, or "Echo" - installed an echo-board inside the radio, "slide mods" designed to slide to a greater extent from the channels center frequency, or "Power mods" designed to get more audio and wattage from the original stock form - are usually done by a tech that the customer has "had a falling out with". Or the owner is abandoning the radio due to it's inherent "faults". Or the owner decided to become a tech and wound up being the one at fault. Who knows? To Whom the bell tolls...

Any mod, done properly, is worth the price. But, you can't guarantee that what they did to it is going to live up to your expectations.

To me, the more "virgin" the radio is, the more responsible the operator. They thought the process through. Should I or shouldn't I?

I look at radio, any radio, like this...

If the radio doesn't perform like it should out of the box, either...
Lower your expectations,
or...
Get a radio that performs like you would expect.

If it costs too much, then you shouldn't be playing with the radio - period.

You ask, "What do these modifications do???" - usually they are done to annoy people, up the scale for, impressing their friends. Somehow and I don't quite understand why, the radio seems to cost more for the more work that goes into it while getting less out of it, so someone

decides to cut their losses and go for another, newer one.

To me, unless it's bargain bin price, used and modded radios are not worth placing a bid on something you'd have to spend a lot of your own time on, if you're into rebuilding radios, and never get what your time is worth out of it. Unless you're desperate.

In my experiences, people that sell radios, already modded, have somehow got into trouble with something, so they have to "dump it". Whether the customer never picked up the radio, bleeds over a TV or phone, or complaints from other operators "it doesn't sound/work right", and not excluding, needs money for a vice. You pick.

Usually - I find them [used/modded radios] to be "Charity cases".

The more responsible operators sell only to other responsible operators - knowing the investment will be taken care of and not butchered.

When you see it on Ebay, it's anything goes...

Caveat Emptor!

End of story.

On 24 Feb 2001 22:46:55 GMT, while the modem was ice fishing with the Mouse, bsull2@aol.com (BSull2) dissertated the following:

Hi, Maggie. See the thread "AM vs SSB", which ran during the past four days. It should answer a lot of questions--especially the one giving the history of how SSB developed. It was simple enough, even for *me*!

If your transmit frequency is set perfect, and everyone else has the same perfection in their radio, then their is no need for a clarifier mod.

You aren't really trying to tell me that this perfection is normal with CB radios.....are you?

>I have uncut limiters and uncut clarifiers. I never have a problem >in a roundtable. Are you just lazy, and can't tweak your knob? Is >your ear out of tune and can't understand when it is slightly off? <g>

No i'm not lazy. I just understand that CB radios have limitations.

They are not nearly frequency stable enough for the different environments they are to be used in. They are rarely ever on frequency from the factory. Even if a tech would align the TX frequency there is no guarantee that his reference is correct. There is no guarantee that a radio will be used at room temperature.

If you understand that SSB is very frequency intolerant then you would realize that all of the CB frequency issues can be minimized best by gaining control of your TX frequency. This is best done with a tied TX and RX. When done correctly it is no different than operating a 706, or a 940, or a 767. They all are tied by default. No one has any trouble aligning themselves to an existing transmission. The exact frequency is unimportant as long as all parties can get to the same frequency.

The use of a RIT is rare in an amateur roundtable. Using the RIT is secondary to landing on frequency to the already existing roundtable. Once landed, with the aid of a tied TX and RX, you can deviate your receiver with the RIT. You have to have a means to land the TX accurately first.

>Every time this issue comes up, you can't stand to hear the other >guys' point. Yours is the only "right way". I respectfully disagree.

I have been talking roundtables for 20 years. It is obvious that a CB radio with a stock clarifier setup is an accident waiting to happen.

Scenario 1
Existing roundtable on 27.365. A new SSB operator transmits his brand new out of the box 148. He sounds like Donald duck. He is told he needs to get his radio aligned to 27.365 Is this the fix?

Scenario 2
The new operator takes the advice and gets a tech to put his radio on 27.365. This new SSB operator can't wait to get back to the members of the roundtable with his fixed radio. Meanwhile the 148 waits patiently in the car until the new operator gets off of work. The new operator punches the clock and proceeds out to the cold parking lot. He quickly turns on his radio in anticipation of the 27.365 roundtable. Good news. They are out there, but for some strange reason the new operator has to move his clarifier off of the 12 o'clock position in order to tune in the roundtable. He does so and then keys up.

Someone in the roundtable says, " You sound like Herman Munster, you better get your radio aligned." The new operator says, "I just got the thing back from the tech, he put it right on frequency" A member of the roundtable goes on to explain that getting a CB radio on frequency will not guarantee that you will always be on frequency. Temperature changes will nullify the accuracy of the alignment. CB radios drift as much as 500hz with temperature changes. 500hz is nothing on AM but is everything on SSB.

The new operator says "You mean I can only use this damn thing on SSB if it's aligned and held at a steady temperature?" A member of the roundtable says, " You got that right, but their is a easier solution. Your stock CB radios can be made useful if you gained control of your TX frequency. All you have to do is make your clarifier simultaneously adjust both the TX and the RX frequency. Once done, even if your radio has drifted off frequency, you can self align it right on the spot. Just tune the roundtable in and your TX will automatically follow. We do it all time. We all can land our own radio regardless of the instability issues of a CB radio."

**********
The reason I insist on my way IS BECAUSE IT IS THE RIGHT WAY.
No stock aligned CB radio can transmit on the same frequency in different temperatures .

All correctly unlocked CB radios can transmit on any frequency needed. Regardless of temperature drifting.

# 2424. Re: Baby Monitor Freq Question?

The difference between the baby monitor and the second harmonic of Ch 19 is about 5.370 MHz. If you double that it is amazingly close to the 10.7 IF (10.740) so I expect that he was seeing mixing products and it came through loud and clear complete with profanity.

I have a Cobra 29LTD-ST in my car connected to a Solacon 38-in loaded whip. I have observed through the 29LTD-ST SWR meter that sometimes the SWR varies (increases and then goes back to normal) while I the car is on the road. I have of course tuned the antenna for minimum SWR before.

Does any body know what is casuing this and remedy? TIA for any reply...

Regards,

Ramon

If one monitors 10 meters you will see that having rules does help to making long range Skip contacts !Because Ham radio operators will weight for one operator to complete a contact before another one tries to contact that distant DX station and in a lot of cases you can talk 1/2 way around the world on 20 watts or less when the Skip cycle is like it has been the last 6 months and the FCC has made the Ham test a lot easier so it complies more with other countries rules to try and get more radio operators interested!

> I have heard with 1 or 2 exceptions is Morse and Spanish.

28.0 to 29.7 is a treaty frequency assigned to the Amateur Service worldwide. It is not within the authority of the FCC to change that. The 11 meter broadcast is similarly an international frequency band. Between them is for the most part a Land Mobile allocation which is the reason for the 155 mile (250 klicks) limit and why most countries do require at least one party to a contact be mobile (we don't).

You do raise a point re truckers that at some point does have to be attacked, with any luck with some sense, that 27 MHz is where truckers are and should be but in a band restricted to them exclusively with NBFM required. A neighboring few channels might also be opened to 4 wheel operation. The mandatory power switch and a return to a calling channel as in the VHF Marine freqs might also make some sense.

There are three things that have to happen:

1. Recognition that it is not 1958.
2. Provision for mobiles and truckers.
3. Outlawing AM outside the legal 40 until it dies there as well.
Probably have to do it on the 10 meter ham band as well so it sticks out like a sore thumb.

Proper provision for the unique needs of the trucking industry to me is the key to the whole shebang. Then we can use small nuclear devices on the export manufacturers.

I guess the sad part is that not everyone has the same radio you do. Once again, we get back to the fact that all radios are not created equally. There is no way to insure that all of our TX and RX's are aligned as you claim yours to be. I do see your point, but like I said, it's not a perfect world, and the compromise we have is the best that is available. That being said, if you don't want to tune anyone in, go talk FM.

1) It's called a reverse polarity diode. Just try to get the numbers or markings from it, got to your local radshack, and be sure to put it in the same way you took it out. Look for the silver line that wraps all the way around the diode before you desolder it so you will know which way to put the new one in.
2) Be sure you have the proper fuses in line on the positive and negative sides of your power wires.
3) Don't hook it up backwards.

I don't know why you would want a modded CB in a dune buggy. In any
case, I recommend the old Johnson Messenger III. It can only use a few
crystal-controlled channels (how many do you need?), but the radio is
the closest thing to bullet-proof you will ever find.

Something doesn't quite make sense here, does she record the audio
from the baby monitor? Anyway, I have a page you might want to read:

That's great! Can I quote that?

>In my experiences, people that sell radios, already modded, have
>somehow got into trouble with something, so they have to "dump it".
>Whether the customer never picked up the radio, bleeds over a TV or
>phone, or complaints from other operators "it doesn't sound/work
>right", and not excluding, needs money for a vice. You pick.

Most of the CBs that come into the shop are to reverse mods.

>Usually - I find them [used/modded radios] to be "Charity cases".

Most of the CBs that come into the shop to reverse the mods have been
permanently damaged in the process of modification.

>When you see it on Ebay, it's anything goes...

To this I must respond in a seperate thread. I have been on ebay for a
few years, buying and selling all kinds of stuff. I have _never_
received _any_ CB stuff that was properly packed, and very little of
it was described honestly. Some of it has even been reported stolen.
When selling, almost half of the high bidders bail. Most of them whine
regardless of what you do.

This seems to only happen when dealing with CB radios. I don't do CBs
on ebay any more.

>3. Outlawing AM outside the legal 40 until it dies there as well.
>

Good idea. Creating a new band for CB where FM is the only allowed mode would solve several problems. It would be much more pleasant to listen to, and there would be no motive to boost modulation.

>Probably have to do it on the 10 meter ham band as well so it sticks out
>like a sore thumb.
>

It already sticks out. The hams who use AM are on frequencies high in the band. The outlaws are easily spotted by being in the CW & beacon portions of the band. Fortunately for Intruder Watch, they use standard 10KHz spacing, which makes scanning large chuncks of spectrum easy and rapid.

>What is the difference between SSB and AM ????
>
>

That's an excellent question. Perhaps it would help if you knew how SSB came about.

(1) Several decades ago, it was discovered that when listening to AM, one could reduce the effects of "fading" by turning on the BFO (the part of the radio used to make CW signals audible) to zero beat the signal.

(2) So some sharp guys decided to see if they could reduce the ratio of carrier to sidebands to save transmit power. The carrier was reinforced at the receiver by using the BFO.

(3) It worked so well that somebody said, "Do we need the carrier at all? What if we just transmit the sidebands and let the receiver insert the carrier?"

(4) When that proved successful, someone pointed out that since the sidebands are mirror images of each other, perhaps only one was needed to convey information. And it worked.

(5) So somebody said, "Well, if we're only using the UPPER sideband, could something be transmitted independently on the LOWER sideband at the same time. Guess what? That also worked.

(6) But numerous folks pointed out that it was difficult to keep the radios in "tune". Vibration, temperature changes, and other factors meant that the receiving operator had to constantly change his frequency setting to avoid speech sounding like Donald Duck.

(7) About this time, folks were shifting away from separate receivers and transmitters. Transceivers were becoming popular. This created a new problem: I adjust my dial to improve reception. This shifts my transmit frequency (as well as the receive frequency). So you have to adjust your frequency to compensate for my new frequency. Then I have to adjust to compensate for your compensation. The next thing you know....we have "walked" out of the band and we get a nastygram from the FCC.

(8) Collins Radio solved problem 6 by designing a VFO which always operated on the stable frequency of 5 MHz, even when the receiver/transmitter was working at 28 MHz. This, along with temperature-compensated components in the frequency-determining circuits, produced equipment which could be set accurately and which would remain "on frequency", even under severe conditions.

(9) Back to problem 7. The fix was easy. Radio manufacturers began including a RIT control which would "tweak" the receiver frequency without distrubing the transmitted frequency.

(10) Type-accepted CB equipment uses even more advanced frequency-determining circuits. Type-accepted radios for CB are "channelized", rather than being "continuously tuned" like Amateur gear. With the RIT control, it makes it simple to carry on conversations on SSB. And, since all the talk power is in one sideband, instead of being spread among two sidebands and a power-hungry carrier wave, you get much better performance on SSB, comparing watt for watt with AM.

Even more important to CB operators is that sideband DOUBLES THE NUMBER OF AVAILABLE CHANNELS! I can be on channel 38 LSB talking with you, and Ice Cold can be cracking his jokes on 38 USB. There will be no interference between LSB and USB. (Whether you feel that Ice Cold should be given a clear channel for telling jokes is a matter of individual taste--grin).

Amateur operators employ a different technique for conserving spectrum space and reducing interference. On 7 MHz and below, the standard practice is to use LSB. On higher bands, the convention is USB. This produces an ecomony similar to angled parking spaces.

If the FCC would just allocate 3 or 4 mhz say from 26 to 29mhz

26 to 29 MHz? No thanks. Those frequencies already are allocated to someone else. I can think of one specific allocation (one MHz wide) in your proposal which is gonna get you flamed! :)
QRM

If you are going to freeband, stay below 28. As QRM mentioned, many of the freqs are allocated to other services, but what he doesn't mention, is many of these frequencies have been deserted and/or abandoned long ago by the perspective entities that retain rights to these freqs. There may be a few hold outs, but not many. The only thing one is likely to hear from 26 to the high 29's are other freebanders. Generating harmonics into other bands is a bigger problem than freebanding on the freqs mentioned. Stay clean, stay informed.

# 2447. Re: Cobra 29LTD-ST Varying SWR

Newsgroup: rec.radio.cb

Source record: 74077

Varying road conditions and weather can play a part in this phenomena.
Any metallic objects within 30ft. of your antenna can raise the SWR due to reflection.
Driving under or near high-tension power lines while transmitting can raise SWR.
Use quality coax such as Times LMR brand with Amphenol connectors and seal the connections
to prevent moisture from entering the connection and raising SWR.
Watch your SWR meter when transmitting in a open area such as a field, if it climbs when you
modulate check for a high dead-key (greater than 3watts).
Good Luck........

From: h <not@aol.com>
Message-ID: <t9i6s0hhgu10a9@corp.supernews.com>
Source record: 74079

Trucks do sometimes get inspected. In 7 years of driving I have been inspected TWICE.
The inspection stations are costly and manpower intensive. Added to that log book fudging is VERY widespread. Companies pushing drivers to lie on log books and drive way too many hours is still VERY widespread. When a truck driver falls asleep and kills people the inspection and fallout is insanely manpoer intensive and time consuming. The idea that ispection stations and DOT and State patrol units will waste one single man hour or even one man second looking for "big radios" is a pipe dream.
There are lobby groups that range from Unions to PATT(parents against tired truckers) down to the fringe groups and even enviromental wackos that want attention in these matters.
There is no group known a Mothers against AMPS or Kids against Kilowatts.
Simple fact is that in this envioroment with big time polital interests and big money the ARRL is less then a pimple on a Bull's ass.
As for HR whatever and the bill in congress concerning cb enforcement does anyone know haw much FUNDING was allocated to enforcement? Without funding a bill(or law) is just another blue law among 100,000 other laws.
Truthfully in the real world a 9 yr old with a can of spray paint rates a thound times the attention that a freebander with the dirtiest amp powered by 10 alternators saying AAUUDDIIOOO! to the tune of multiple Killowatts of dirty RF.

Only one problem with this. Say you locate a truck. Then 2 agents go down to where the truck is parked. There's 50 trucks minimum. There are also 2 prostitutes and one candyman(drug dealer).
Or you spot the transmission on I-80 mile 52.4 in Jersey headed to the GW bridge? Maybe congress will allocate funds for a KH-11 keyhole satellite tasking. That's what? 30 million dollars for one license plate from some guy who has a 150 dollar radio?
This will only work with someone using a base station.

I fail to see the thrill in a Galaxy rig,why do people continue to try and sell a radio for more than it's
worth when they paid too much to begin with.
Is it the Robot feature or the Red modulation light in the meter or maybe the fancy channel
selector.
Please enlighten me as to what makes these radios more valuable than a 2950 (which blows smoke
all over a DX99) or a President (another cat-kickin dog-walker).
I'd rather push my Ranger up a hill than drive a Galaxy down the other side.....

The contacting part will work. Education of what happens when you stray into Ham territory will work. The inspections part probably won't and anyway every truck with a big radio also has a spare legit one. You see trucks along the road miles before an inspection station. They are updating there log books etc.
Heck 99% of trucks with big radios have no internet access and these issues never make national coverage.
Last time CB's made national news was when Barbra Walters bought her daughter a cb and some Neaderthal Truck driver asked her for some head. That flap lasted one day!

I think it's their distribution network.
Ya see while Ranger was in the lab making thier radios the state of the art
Galaxy was out hitting the streets hawking their wares to Flying J's Petro
and Pilot's.
Look at Cobra, the Windows 95 of radios. Junk but it sells. Even EEI says
their junk but admit that they bring in cashflow so they sell them. They say
this on thier web site!

Source record: 74153

Greetings!

It's an RF choke used to filter out "hash" and other electrical signals that aren't DC on the power supply line. They have a ferrite core and is wound with wire to act like a choke. It's purpose is to remove any of the hash noises that may be present and pass DC.

When the power got hooked up backwards, and it sounds like this one is another one of those, you may have two parts out.

One, the power supply hash choke, and second, power reversal protection diode. Both are one of the first things the radio has to condition the power supply and filter out noise from the engine and such. The diode is supposed to blow a fuse, and the RF choke should be able to handle some considerable current.

If the power was hooked up backwards, it takes out the diode. Then if the diode is shorted - in these cases it usually is, the next time power is applied, things look fine, but the diode is a dead short to ground and burns up the hash choke. The choke overheats and burns up.

If you use a power supply at home on the base, you may not need to replace the choke. Remove it and install a jumper. Then replace the power supply reverse protection diode with a beefier unit, like a 1N4002 or 1N4003 with a 3A rating with at least 50PIV rating too.

If you want another radio - go get one, but you can fix the one you have.

On Sat, 24 Feb 2001 10:49:41 -0600 (CST), while the modem was ice fishing with the Mouse, cdtruth2@webtv.net (See D. Truth) dissertated the following:

Ken:
Baby monitors (not the crybaby trucker monitors!) are on the cordless phone freqs. around 49 mc on FM mode, where CB is on 27 on AM or SSB, usually. Sounds like to me this chittlin' was listening to CB on Channel 6 or 10, OR maybe one of your monitors (the transmitter @ the baby) was OFF and the receiver was picking up another one down the road, probably at some yuppies house that had a Base station on that was close to the monitor, re-transmitting it--therefore yo kid now has the "mud duck" edjumucation now, which he wouldn't get listening to 19, unless those people went from 10 to 19 and talked there. 5 month old speaking? What kind of CB drugs do you feed it? High speed Chicken feed (cafeene)?
Dave!!!!!!!!!!

I'd rather push my Ranger up a hill than drive a Galaxy down the other side.....

And in many cases, you would. It's a personal choice thing..Chevy, Ford, Dodge, etc. I ain't found a Ranger in the world that can hold up to extreme 4 X 4 action. Same with those cherokee CM models. A little bouncing over some real ROADS and mudpits and they're junk! The 4 X 4 trucks 'round these swamps usually run Galaxy, Uniden, a few Cobras, and a Connex or two. There are others, but thats the gist of it here. By the way, where you at 714? Waving from Tampa Bay!

Source record: 74154

No, CB'ers didn't mess up 23 channels, and then messed up the extra 17 channels. And if they open up 26-28 mc to CB, it won't be ANY DIFFERENT from what it is now, mainly because CB is suffering NOW from what the Hambos are suffering from too, which you yuppies would call "a reduction or depletion of operators," mainly because of the alleged legalized abortion starting in '73, which has caused LESS PEOPLE to be here, in the hood, and on the CB and Hambo bands!!!! Those extra 17 channels came from PRESSURE from the public and Congress that had MILLIONS of new people getting on CB in 1976. MORE CB space WAS needed, just like it is today! Before that there was a push for MORE channels, mainly by the freebanders of the 60's & 70's. I'm GLAD that ALL yo Hambo freqs. are so perfect and clean (like Heaven) so when I want a piece of Heaven, I can just tune my SW receiver or my Pole Leece scanner to the144 mc 2 meter CB band and hear heaven's freqs. and languages!!!!!
Dave!!!!!!!!!!!!!!!

<WALTERB@prodigy.net> wrote in message
news:97ae7p$7ur6$1@newssvr05-en0.news.prodigy.com...
If one monitors 10 meters you will see that having rules does help to making long range Skip contacts !Because Ham radio operators will weight for one operator to complete a contact before another one tries to contact that distant DX station and in a lot of cases you can talk 1/2 way around the world on 20 watts or less when the Skip cycle is like it has been the last 6 months and the FCC has made the Ham test a lot easier so it complies more with other countries rules to try and get more radio operators interested!

To this I must respond in a seperate thread. I have been on ebay for a few years, buying and selling all kinds of stuff. I have _never_ received _any_ CB stuff that was properly packed, and very little of it was described honestly. Some of it has even been reported stolen. When selling, almost half of the high bidders bail. Most of them whine regardless of what you do.

This seems to only happen when dealing with CB radios. I don't do CBs on ebay any more.

You commies are something else! What is a kid to listen to after he makes a SW radio kit and listens to his FIRST hams on Ancient Mary on 10 meters talking to each other in a group? But you say that there are NO MORE SW radio kits left, since I made mine around '68-70! (so no need for AM on 10 meters. Also you pinkos seem to miss the point about the MOST popular FREQ. of ALL time--27.185--it IS the BIG ROAD or travelling channesl. Big trucks, vacationers, salesman, anyone can use it FOR SAFETY or BEAR reports. BEARS. Do YOU know who the bears are? Do you know WHERE they are? CB saves $$$$ and LIVES, 2 things Hambos can NOT do TOGETHER (ham costs, not pays)!!!!!! Dave!!!!!!!!!!!!!!!!

>

Good idea. Creating a new band for CB where FM is the only allowed mode would
solve several problems. It would be much more pleasant to listen to, and there
would be no motive to boost modulation.

>Probably have to do it on the 10 meter ham band as well so it sticks out
>like a sore thumb.
>

It already sticks out. The hams who use AM are on frequencies high in the band. The outlaws are easily spotted by being in the CW & beacon portions of
the band. Fortunately for Intruder Watch, they use standard 10KHz spacing, which makes scanning large chuncks of spectrum easy and rapid.

You can buy the whip part at Radio Shack but don't buy the ball mount
and spring from them! Their ball mount is complete junk made out of
pot metal and the threads pull out and strip real easy. I recomment
the Hustler brand ball and spring, which you can mail order from
www.aesham.com .

# 2484. Re: Cobra 29LTD-ST Varying SWR

Newsgroup: rec.radio.cb
Date: 2001-02-25 17:22:23 UTC

Message-ID: <26fi9to1m55tkvppcr0c02nona71cnp7kk@4ax.com>
Source record: 74163

Greetings!

There are meany reasons for that phenomenon, mostly due to proximity
to other objects that the antenna will interact with, including ground
water table and soil conductivity.

If all the connections on the antenna check ok, the SWR fluctuation is
most likely due to overhead wires, conduits and drainage pipes in the
ground, or poor soil conductivity due to seasonal changes.

When the SWR can be checked as you drive, take a few minutes to check
out how the SWR is being affected.

Drive over the spot that the SWR shot up at, turn around and drive
over it again, the same speed. If it shoots up again, then there is an
object within the antennas near field that is causing this and is not
the fault of your antenna.

If it doesn't change at the same spot, then suspect the antenna is
causing the SWR problem and you need to re-check connections.

Some antennas are very sensitive to ground field effects caused by
traveling over different types of terrain and any underground wiring
that is present under the vehicle as you drive over it. Even overhead
wiring can play a role in how SWR is affected, one place the SWR is
fine, but less than a 100 feet down the road, the SWR is all over the
place due to the overhead wires.

Greetings!

It's a good reason to stay away from Ebay. If you can't meet the person face to face, on common ground, somethings up. Why bid on something that they might be able to pick up locally from a garage sale and is half the price? Only if they're into such exotic stuff - then bid and take the chances. Hope they have a Credit Card for problems.

People from the other side of the "great pond" are excluded. I don't expect people to make a flight to show off the radio. Just be cautious when it comes to buying a radio off the internet.

As a good practice, a person will set up a web-page showing off the wares instead and offer email and will take considerable effort to assure the potential buyer the equipment is worth the price.

Which brings up the bids versus asking price. Greed versus a Honest deal. The internet buyer does need to be aware.

Now, I'm not saying Ebay is bad, far from it. But Ebay is abused often enough to generate problems and have a reputation for "fencing" stuff.

A recent commercial features a man looking for a unique gift, find a table lamp, and pays $500.00 for it, only to find his wife was selling it at the auction side and he just bought it.

The laugh she makes at the end of the commercial is the catalyst for my thoughts on this Ebay subject.

Just ask Bill Clinton. ;-)

sorry lost the thread but i think the best choice is a superstar3900. you can buy them new with the channels fo 99 bucks and they last. not the most high tech radio but theres been some in use on shrimp boats around here for years and years in the ruffest environment you can get without trouble. in most cases the radios are banged up and rusty but still working.

> from what it is now,

You got that right. The same crap you hear on channels 1 to 23 you can now hear on channels 24 to 40.

> I'm GLAD that ALL yo Hambo freqs. are so perfect and clean

Thank you. 8-)) If you tune around enough you will find a lot of ex-CBers, on 2m's, and other bands too by the way, who did not want to put up with the foul language, jammers, channel control freaks, etc. found on every channel at some time of the day on 11m. You even had people like good old "Bob" on 27.555 MHz a while back, so even the freebanders don't get any relief either.

I personally heard one new Ham explain at length why he got his license, because he did not want to expose is young kids to the filthy language spewing from the speaker on his CB radio in the mobile. He said he had to keep it turned off whenever he had the kids with him. Around here in the Detroit area I can tune in to any CB channel, at random, and be sure of hearing the "F---" word used with in a few minutes, if not sooner. I don't hear that on the Ham V/UHF bands around here at all.

Greetings!

It's called, keeping up with the Joneses'.

I do sympathize.

Many people, including myself, feel the Galaxy XX series is nearing
it's end as far as being "State of the art". There are a lot more
radios with far more features for a better price out there. Or similar
featured radios for far less cost.

Simply put, the Galaxy line has run it's course. There are radios out
there that have far better performance and less problems right from
the start. Even Galaxy has considered this and has introduced new
radios that perform just as well as their more expensive counterparts
and are cheaper in cost.

Durability? Well, Uniden has my vote. That is another story for later.

Sounds like a good use for the new MURS CB band. One to two watts EIRP, NBFM (No AM and No SSB), external antennas allowed, perfect for the truck driver. Now try to get them to use it in place of 11m. Good luck.

I heard a tale of a trucker who was so stoned when he pulled onto the remote scale on the NB side
of the Interstate he failed to notice the video cameras that point into the truck, the keen DOT officer
noticed what appeared to be a ziploc baggie with a pack of rolling papers sitting on the dash.
The officer continued to hold him on the scale by holding the Red light until Officers surrounded
his vehicle at which point he was arrested for unowhat.....

Buy a Ranger, buy a Galaxy, your money goes to the same company. Ranger owns Galaxy..
I like the 2950, lots of neat features, but I prefer my Galaxy. I don't talk sideband, so I don't mind about the Galaxy SSB drift. The AM side works wonderful. GREAT audio..
Maniac.

never worked on one, but sure looks awful close to the Cobra 2010 base doesn't it??
Don't really care for those....
Maniac.

Tomahawk is a clone of the Cherokee CBS 1000 without the weather band. The Tomahawk has FM, whereas the Cherokee has only FM receive capability, but no transmit. Not worth more than 150-175 bucks NEW, in my lowly opinion. I have owned both.

Nothing is junk if it does what you want it to do. I pulled one out of
a car after a head-on collision - still worked perfectly. You can drop
'em, toss 'em, soak 'em, etc, they just keep on working. With that
octal power plug they are easy to swap, and even have a remote plug so
you can set it up to be a repeater. It is just a darn good 'ol radio.

Sparky, FLRC

Dave or Debby wrote:
CB saves $$$$
> and LIVES, 2 things Hambos can NOT do TOGETHER (ham costs, not pays)!!!!!!
> Dave!!!!!!!!!!!!!!!!

HAHAHAHAHAHAHAHAHAHAHAHAHAHA! LOL! ROTFLOL!

Hmmmm! I can dial 911 from my 2 meter handheld to assist a stranded motorist without paying cell charges. Saves ME money!

I can tell other hams where "Smokey Bear" is with crystal clarity! Saves US money.

I can load up my vehicle, travel to a disaster area (flood, fire, tornado, etc), set up a generator, shoot some dipoles into the trees and set up a temporary VHF/440 antenna and be on-air in about an hour--less if I have other hams helping. This saves lives, property, and money on the part of FEMA--ever heard of them?

I can use my 2 meter HT during thunderstorms to alert National Weather Service of the local conditions in REAL time, allowing them to get warnings onto the media of impending danger. It's called SKYWARN and this, too, saves lives and property by alerting the public to approaching weather.

I can participate in the Maritime Mobile Service Net on 20 meters using my HF equipment to assist yachts, sailboats, and even ships at sea. Remember about a year ago the Dutch family that was attacked by pirates and their 13 year old son who was shot and remained in a Florida hospital for months? It wasn't CB radio that saved their lives! It was HAM radio that came to the rescue. This happens quite often, different scenarios, different emergencies, but HAM radio is very often the means of getting help, especially in remote parts of the world--or sea!

Ham radio COSTS and doesn't PAY?? HA! I'd like you to tell the people, the THOUSANDS of people whose lives have been positively influenced by HAM radio that it "doesn't pay".

Dave, you're FUNNY!

Jerry

What does that mean, Jay?
The real answer to this BOZO post is that under communism, EVERYONE is Illegal (a sick eagle)!
When someone calls someone "illegal" is is under the context of the 6th plank of the communist manifesto! SO Commrad--vat kint of vatts do you run, Sunny? ! I believe that your alleged violators of the 6th plank are VERY popular. It's too bad you didn't have a Deja address too! It has been nice (most ALL WILL agree), to have most of dem 6th plank pushers GONE now. I hope it will last! We need to suppowt CB, not smash someone that doesn't wear a hammer & sickle as a call sign!!!!
Dave!!!!!!!!!!!

GREAT one Mr. ICE MAN !!!!!! (this one is probably Religiously Correct, too!)
Dave!!!!!

"COLD as ICE" <icecoldnyc@aol.comICECOLD> wrote in message news:20010222221919.18626.00000402@nso-md.aol.com...
A cabbie picks up a nun. She gets into the cab, and the cab driver won't stop staring at her. She asks him why is he staring and he replies, "I have a question to ask you but I don't want to offend you. She answers, "My dear son, you cannot offend me. When you're as old as I am and have been a nun as long as I have, you get a chance to see and hear just about everything. I'm sure that there's nothing you could say or ask that I would find offensive."

"Well, I've always had a fantasy to have a nun kiss me." She responds, "We'll see what we can do about that. There are two conditions, #1, you have to be a Catholic and #2 you have to be single."

The cab driver is very excited and says, "What luck! I am single and I'm Catholic too!" The nun says "OK, pull over into the next alley."

He does and the nun fulfills his fantasy with a long, wet, deep, juicy kiss.

But when they get back on the road, the cab driver starts crying. "My dear child," said the nun, "why are you crying?" "Forgive me sister, but I have sinned. I lied, and I must confess, I'm married and I'm Jewish."

The nun says, "That's OK, my name is Kevin and I'm on my way to a Halloween party."

COLD as ICE and TWICE as NICE.. Mr. ICECOLD BIG APPLE TREES says.. It don't mean a THING if you ain't got that SWING!!!!!!!

I don't think so. The Galaxy and Connex seesters have been around since the early 80's, and are Truck Drivers CB's. Did Ba Ba WaWa kill all of them yet? NO that commie didn't. So therefore this circuit board will be around as long or longer than yo Uniden 78 or Cobra 29 boards!!!!! My question, like the song goes, "In the year 2525, will Base Stations be Alive?" !!!!! Dave!!!!!!!!!!

"Handy Andy" <CodysPC@Iserve.Net> wrote in message news:g6hi9ts8ncb4fe7mei8p68bsqifvvge972@4ax.com...
Greetings!

It's called, keeping up with the Joneses'.

I do sympathize.

Many people, including myself, feel the Galaxy XX series is nearing it's end as far as being "State of the art". There are a lot more radios with far more features for a better price out there. Or similar featured radios for far less cost.

Simply put, the Galaxy line has run it's course. There are radios out there that have far better performance and less problems right from the start. Even Galaxy has considered this and has introduced new radios that perform just as well as their more expensive counterparts and are cheaper in cost.

Durability? Well, Uniden has my vote. That is another story for later.

On Sun, 25 Feb 2001 10:24:26 -0500, while the modem was ice fishing with the Mouse, "Mad Dog" <lgssl@netzero.net> dissertated the following:

:+> I fail to see the thrill in a Galaxy rig,why do people continue to try and
:+> sell a radio for more than it's
:+> worth when they paid too much to begin with.
:+> Is it the Robot feature or the Red modulation light in the meter or maybe

## 2515. F.S. 10 Meter Base Station

Newsgroup: rec.radio.cb
Date: 2001-02-25 20:36:18 UTC
From: DummyLoad@webtv.net
Message-ID: <15827-3A996CC2-1@storefull-116.iap.bryant.webtv.net>
Source record: 74197

I have a new Comanche Warrior 10 Meter Base Station radio that I am looking to sell. This radio is the updated version of the Eagle Tomahawk. Same exact look, but more features. This radio was purchased recently and is in absolute mint condition.

Unit features 450 channels in all modes...AM, FM, CW, USB & LSB. Radio is completely stock other than channel conversion. Unit has large well lit meters with adjustable brightness and digital display with frequency and channel readout. Nice clear audio with tone control adjust. Can do split frequency transmit & receive with tone burst for repeater access. Channel change from the microphone. Can be powered by external power supply or ac power. Comes with original box, manual, receipt, and hardware. New condition radio for used radio price. $125 shipped.

# 2516. HATEFULL CB SHOPS

Newsgroup: rec.radio.cb
Date: 2001-02-25 20:42:03 UTC
From: Dave or Debby <truth@planetc.com>
Message-ID: <3a997036@news.planetc.com>
Source record: 74196

Qustion: Which industry has the most amount of HATE in it for others in that industry (competition or others that are in the same business)? CB Shops. Am I right or not? Post your story of what INCOMPETANT CB shops have said or done to other Shops that you are aware of. I have heard some stories myself, but I have direct personal knowledge of it too, since I am one. The really GOOD and best places in the land, are not or less hateful of anyone in the business. The INCOMPETANTS are saying and doing every hateful & evil thing to try to prevent business from going to no one but them. A fameous parts man in the business told me "Usually it is the place that knows the least that bashes the competant shop." I found that this IS true! Put your story below this post, and maybe I'll tell you of the 2 shops that threatened ME last week (just because I am in the business)!!!!! God forbid that 2 shops be at the same interchange, or be in the sticks 10 miles apart!!!!! There was 2 shops (me included) that worked out of 1 truckstop for a time, with NO Anna-moss-ity! Can anyone top that?!!!! What is your best or worst story?
Dave!!!!!!

# 2517. Re: Truckers and FCC enforcement

Newsgroup: rec.radio.cb
Date: 2001-02-25 20:50:06 UTC
From: Jerry Oxendine <joxendi@bellsouth.net>
Message-ID: <3A996FFE.288C@bellsouth.net>
Source record: 74198

Ken,

If you are referring to the post I made earlier, let me clarify that ARRL has not had anything to do, does not now, nor will have to do with future CB enforcement. What IS happening more and more is that the so-called "rogue" operators are not only freebanding, but straying ever farther and farther away from the 40 channels allocated. This is, in part, the fault of a short-sighted Congress and a short-funded FCC. As these rogues become bolder and bolder, i.e., open a "new" door and say "HELLO?" and not getting an answer, they then ocupy a new "room" thinking that this "room" is not "owned" by someone else. This process WILL repeat and repeat again if something is not done. Eventually, enough "rooms" will be occupied until those that are affected will begin to complain--just as the hams are now complaining about the export radios and 10 meters. When the complaints become loud enough and forceful enough, something will happen. The first response has already been made and whether it is the RIGHT response, or it is an EFFECTIVE response remains to be seen. This is, of course, is the local enforcement law enacted by Congress recently. There is not much funding needed, really, for local LEOS to answer complaints of interference.

Recently, in my own city, a councilman and some of his neighbors had been plagued by a CBer with a 1000 watt "dirty" linear. Prior to this new law, there was nothing they could do. Becoming aware of this law, the councilman obtained a copy of this law and took it to the city council meeting and to the city attorney. I haven't yet heard, but I believe that my city will soon have an 'enforcement' ordinance. The point is, if enough people get bothered by interference or rogues coming onto their assigned frequencies, something WILL get done. It *could* result in FCC regaining funding to establish enforcement teams like they once had. It *could* mean that FCC agents themselves might visit truckstops and weight stations to conduct equipment inspections. This WAS done at a truckstop in Kings Mountain, NC by a team of agents late last year. Several truckers got fines up to $1000 for amps and export radios.

I also made the point that those same truckers *could* inadvertently bring attention to other illegal issues, as well as upon themselves, as they range ever farther away from their assigned bands. This would get speeded up IF one happened to interfere with emergency traffic. For example, let's say the truckers reach into the 42-46 MHZ band. Guess what's there. Many state highway patrols and DOT agencies operate there. Can you say, "UH, OH!"? There are forestry and rescue squads that operate a ways above 30 MHZ.

In summary, what I AM saying is that we should NOT make the assumption
that we are "immune" to enforcement and can do whatever we will wherever
we will. The reason it has gone as far as it has is because of the
shortsightedness of Congress in de-funding FCC to the extent necessary
to do its job. But that doesn't mean it can't or won't be restored if
enough people are affected by the "outlaws" and scoffers.

Finally, as I previously mentioned, there are efforts underway within
the ham community to protect their spectrum from these illegal, lawless,
and unwanted operators that are "squatting" on 10 meters. This effort
is just getting started, organization efforts are in their infancy. Once
fully underway, don't be surprised if you hear rumblings out of Congress
about this issue once again. Letters are already being written, petit-
ions are being circulated within the Amateur community--all to be sent
to Congressional Representatives demanding something be done about the
10 meter/export radio problem. This I know. ARRL IS concerned, not
with CB, but with the AMATEUR 10 meter allocation. I fully expect that
the area between 28.000 and 29.700, allocated to hams by international
treaty WILL be defended sucessfully.

Respectfully,

Jerry

Get the No-Code book from R/S or borrow one from the library then take the practice tests on
qrz.com.
No-code Technician class license will make you legal for 6,2,and 1.25meter bands also on
23,33 and 70centimeter bands.
General class upgrade is very easy and opens up all of 17 , 30 , and 160meter and selected
portions of 15 , 20 , 40 , and 80meter bands.
Learn C/W and take the 5wpm code test, you have 1 year to take the code test after getting
your General class.
You will pay $10 for each test , unless you pass all 3 in the same test session.

Galaxy for the road, 2950 for a base. I will not take a 2950 out on the road again. Maybe the DX series are better at vibration protection but the two 2950's I've used absolutely hated to go mobile. My 959 Galaxy took a licking and kept on ticking. I have not owned a Galaxy 10 meter radio but I have heard they are reasonably stout for mobile use.
My 2 cents... :-)

Jeff

Some DX clubs on the net use numbers as call signs, and they are just
like handles. It's best not to use a number unless you are a member of
one of those clubs - they tend to get pissy if you pick the same
number as someone else.

>I sure don't want to get into a conversation with some queer boy and not

"h" <not@aol.com> wrote in message news:t9i6s0hhgu10a9@corp.supernews.com...
Trucks do sometimes get inspected. In 7 years of driving I have been inspected TWICE.
The inspection stations are costly and manpower intensive. Added to that log book fudging is VERY widespread. Companies pushing drivers to lie on log books and drive way too many hours is still VERY widespread. When a truck driver falls asleep and kills people the inspection and fallout is insanely manpoer intensive and time consuming. The idea that ispection stations and DOT and State patrol units will waste one single man hour or even one man second looking for "big radios" is a pipe dream.
There are lobby groups that range from Unions to PATT(parents against tired truckers) down to the fringe groups and even enviromental wackos that want attention in these matters.
There is no group known a Mothers against AMPS or Kids against Kilowatts.
Simple fact is that in this envioroment with big time polital interests and big money the ARRL is less then a pimple on a Bull's ass.
As for HR whatever and the bill in congress concerning cb enforcement does anyone know haw much FUNDING was allocated to enforcement? Without funding a bill(or law) is just another blue law among 100,000 other laws.
Truthfully in the real world a 9 yr old with a can of spray paint rates a thound times the attention that a freebander with the dirtiest amp powered by 10 alternators saying AAUUDDIIOOO! to the tune of multiple Killowatts of dirty RF.

Greetings!

That "price" is why I say "Joneses" - it's an ego trip for many, but not properly driven or if out of tune - it's a problem child.

And so they are for a lot of people. You do get a radio, with a lot of extra components that are "support" parts for different sections. The inherent faults are due to end user desires and "tweaking" for the customer making it do more than what it's supposed to do.

You need to step back and just see how the older discrete components actually add to the cost - the assembly, soldering, testing - not easily automated. The newer crop of SMD-support parts are more automated using higher technology CAD/CAM versus hiring a sweat-shop to put resistors, caps, transistors, etc that are required for the older discretes.

It looks like Uniden has worked out a lot of bugs with the process of automated assembly and that effort is spreading around to other areas. Looks like Ranger got their act together and is producing better results.

They, the Galaxy XX series, has simply run it's course, and as many are posting to this, Ranger does have a handle on that side of things so they aren't losing any money.

They are simply supplying what the market will bear. There are people that will always buy these radios and learn from them - but the technology available today, makes it an outdated radio looking for a replacement.

The Galaxy XX chassis line [EPT 3600 series - for further clarity] is an older design that many of todays radio engineers possibly learned from. Because of the new crop of radios that are out there, the older trusted designs from those chassis' are still around, only newer support components and refined sections are being utilized. Looking at the Delta-Force Magnum line is a step back in the past for some areas, but a considerable leap forward in others.

The older 3600EPT designs had some inherent problems, these newer designs are similar, but are taking into account a lot of different variables that the older chassis needed "fudge-factoring" to work right. Interlead capacitance, trace impedance, and more have been reworked and no more ground plane pickup problems - simply better circuit designs from the same company - yet cheaper, LOL!

The Galaxy XX line was a radio of it's day, but there are too many
other radios that are better out there that offer more stability and
performance along with durability that makes them more appealing to
the end-user. Customers' want results, not something that refuses to
work right in all conditions.

They will pay, but only for something that works.

Greetings!

Yes, the "bickering" about which tech does a better job - e&c. That stuff occurs all the time. It's a personality issue and sometimes clashes with the effort of finding someone to simply repair the radio.

Some people simply have got a "bum-steer", I have too. And buying or working the grey market, you get that. Some just take it to the extreme and try to boycott and influence others.

Fortunately, the radios I use are easily enough to repair myself, if necessary. So I don't have a personality clash when someone wants more than what the radio can do. That issue is what makes the problems with the CB shops so boisterous when it comes to opinions.

My beef is the "secondary contract" many CB shops have with local techs.

They will sub-contract the repair or modification to another person not related to the company - but hired to do the work. This gets the CB shop out of the FCC loophole for mods, but still in the circle for being a responsible party to the fact that the mods are being done and the shop is only the "front", or contact-point. You need to bring cash - checks are not accepted. Anything that could trace back to a contact person is not accepted as payment.

Linears are the same way, by word of mouth - suddenly a phone call and poof, the kids got a linear, but not from the CB-shop, heavens-no - they didn't have anything to do with it, of course. ;-)

Not a big deal, some shops are easier to do business with regarding a grey market versus other shops that have scruples and need to follow warranty issues to the letter from a companies distributor. You do know what I'm talking about with that Dave. It deals with volume sales.

What causes the "Heathen in the Discotheque" or H&D, is the "quality" of the work done, one does a better job at one type of mod, but another runs circles around the other - at a different mod.

It's to be expected in competition - and that has spilled into the bias of what a person will spend their money at to get what they want.

Did you ever once think that "Miracle on 54th Street" [Santa recommended they get a toy elsewhere] would apply to all types of

markets? Not likely.

I agree with you Hambo's helping people and the sermon. I meant the saving of $$$ from traffic tickets AND helping people? What freq. is the Ham equivelant of 27.185 mc Channel 19, the most populated freq. ever? ! I don't think the Hams have one, other than boat freq. CH. 16, which isn't theirs! Is it in the 2 meter CB band, or on 160 meters? !!!!!! What is ROTFLOL ?
Dave!!!

Dave or Debby wrote:
CB saves $$$$
> and LIVES, 2 things Hambos can NOT do TOGETHER (ham costs, not pays)!!!!!!
> Dave!!!!!!!!!!!!!!!!

HAHAHAHAHAHAHAHAHAHAHAHAHA! LOL! ROTFLOL!

Hmmmm! I can dial 911 from my 2 meter handheld to assist a stranded motorist without paying cell charges. Saves ME money!

I can tell other hams where "Smokey Bear" is with crystal clarity! Saves US money.

I can load up my vehicle, travel to a disaster area (flood, fire, tornado, etc), set up a generator, shoot some dipoles into the trees and set up a temporary VHF/440 antenna and be on-air in about an hour--less if I have other hams helping. This saves lives, property, and money on the part of FEMA--ever heard of them?

I can use my 2 meter HT during thunderstorms to alert National Weather Service of the local conditions in REAL time, allowing them to get warnings onto the media of impending danger. It's called SKYWARN and this, too, saves lives and property by alerting the public to approaching weather.

I can participate in the Maritime Mobile Service Net on 20 meters using my HF equipment to assist yachts, sailboats, and even ships at sea. Remember about a year ago the Dutch family that was attacked by pirates and their 13 year old son who was shot and remained in a Florida hospital for months? It wasn't CB radio that saved their lives! It was HAM radio that came to the rescue. This happens quite often, different scenarios, different emergencies, but HAM radio is very often the means of getting help, especially in remote parts of the world--or sea!

Ham radio COSTS and doesn't PAY?? HA! I'd like you to tell the people, the THOUSANDS of people whose lives have been positively influenced by HAM radio that it "doesn't pay".

Dave, you're FUNNY!

Jerry

The contacting part will work. Education of what happens when you stray into Ham territory will work. The inspections part probably won't and anyway every truck with a big radio also has a spare legit one. You see trucks along the road miles before an inspection station. They are updating there log books etc.
Heck 99% of trucks with big radios have no internet access and these issues never make national coverage.
Last time CB's made national news was when Barbra Walters bought her daughter a cb and some Neaderthal Truck driver asked her for some head. That flap lasted one day!

>these modifications do ?????

They usually ruin a perfectly good radio. This comes from many years
of repairing them, and seeing that most of these 'mods' are done by
idiots with arcwelders.

- Channel mods and 'jump switches' will get you more channels than the
legal 40, both below and above the CB band - even the 10meter ham
band.

- Power mods, or 'tweaking', gets your radio to output more RF than
the legal limit. If tweaked too far you can clip the RF, which causes
interference on other channels as well as the television. It can also
burn out your final.

- Modulation mods, or 'snipping the limiter', allow your radio to
modulate greater than 100%. This is mistakenly believed to increase
your power, but ends up distorting your audio and splattering your RF
into adjacent channels.

Varying road conditions and weather can play a part in this phenomena.
Any metallic objects within 30ft. of your antenna can raise the SWR due to
reflection.
Driving under or near high-tension power lines while transmitting can raise
SWR.
Use quality coax such as Times LMR brand with Amphenol connectors and seal
the connections
to prevent moisture from entering the connection and raising SWR.
Watch your SWR meter when transmitting in a open area such as a field, if it
climbs when you
modulate check for a high dead-key (greater than 3watts).
Good Luck........

I could be wrong but without looking at one i believe that antenna is a
cubical quad,
if so use the standard formula:
driven-1005 / F in Mhz
director-985 / F in Mhz
reflector-1025 / F in Mhz
divide any of the sums by 4 to find element length on one side.....

Hello Dave:

I was ah hopin that Dougie would have a tube socket/grid ring (SK-14)
for a 3CX3000A7, for a new big linear amplifier. Got the filament and
plate transformers, Pi-network, tube shroud/chimney, cathode choke (made
from RG-393 coax, looks bitchen!) plate cap connection, chassie,
squirrel fan, and a mess of small misc relays and switches, ect.

I am not sure what the rest of the stuff is that you said.

Obviously, Dave, you didn't read Jerry's post. I have a 440 FM HT. I can also patch into the phone system with the autopatch. My consistant range from inside the car (not a good idea, it is like sitting inside a 10 dB attenuator) is around 8 - 10 miles. At least 3 repeaters always in good range. Outside the car, it is 15 miles or so with the little ducky and 20 miles plus with the larger whip on it (I can hit a couple out 30 miles). A good dozen repeaters in range from sitting in my easy chair at home. Consistant range once into the repeater runs 30 to over 50 miles depending upon terrain, repeater, and repeater antenna location. My former neighbor listens to my conversations from Wellsville, NY - 103 miles away by car - using a handheld scanner with a coathanger as an antenna. Not bad for 6 aa alkaline batteries (yes, I have NiCads, but they die almost instantly when they run down while the alkalines give me fair warning). If I can't raise someone immediately, I have the autopatch. Money? A friend of mine is in the construction business. He found an area by the lake where his cell phone grabs ahold of a tower in CANADA. A friend of his, also in the construction business, didn't notice - and his guys were calling home every day. His phone bill was around $1200 for that month! (ps - unlimited cell phone runs under $60.00 per month - those were all long distance charges!). I KNOW what repeater I am using. BTW, Arizona was comming in beautifully the other night. Oh yes, the megaplex repeater system here links repeaters on 440, 220, 2 meters, 6 meters, and 10 meters. Arizona was comming in on my 440 HT courtesy of the 10 meter repeater. Yes, Europe does come in now and then. What is the equivalent of 27.185? Nothing. Don't need it. Different folks on different repeaters (although a bunch of us roam around a bit). Regardless, the autopatch eliminates the need for a second operator on the other end of the system. Oh, when traffic is heavy, there are folks on virtually every repeater - with road reports, etc. But at 3:00 in the morning and something happens ... the autopatch works every time.

Cheers from Rochester, NY

Jim

"Dudley" <dudleydort@bigfoot.com> wrote in message
news:Ordm6.17187$t67.292133@news1.rdc1.il.home.com...
> Ready to move up what is my next step.

Whether it is 'moving up' is debatable but it is moving differently.

By way of background, there are 3 1/2 classes of license and four exam elements:

Element 1: Morse at 5wpm. Characters are at13-16 wpm spaced for 5wpm to prevent sleep.
Element 2: A pretty trivial written exam.
Element 3: Where the FCC fulfills its duties under treaties and generally takes you thru ways to get into the soup. Not for electronic geniuses.
Element 4: Much more electronic but not that phenomenal.

The license classes telescope:

Technician: Element 2 only. Gets you all privileges on 50 MHz and above where you are not going to talk all that far. The treaty requires the Morse on international frequencies.

Technician with Element 1: Gains the former Novice privileges on 10 meters and three cw bands.

General; Elements 1,2,3. Missing only 4 25KHz cw bands and the lower half of the 75, 40, 20, and 15 meter phone bands. Full privileges on 160, 30, 17, 12, 10 and above.

Extra: All exams, all privileges.

Now it would seem that a gradual approach would make the most sense. It does not.

What I would advise you or anyone else to do is to grab the bull by the balls and start by getting the Morse out of the way. Depending on such things as innate ability, the method you choose, and mental attitude, the whole process can take somewhere between 15 and 30 hours at one hour a day max. The codeless Tech is not and never was an entry-level ticket; it is so your wife can get you to pick up bread and milk and you can go hunting with the kid. It is actually something of a dead end and tends to produce frustrated people who return to CB with an attitude. Do the code thing first.

There are a lot of approaches that work for 5 wpm. If you have any idea of ever dittybopping again, and a lot of people find out that they like it or need it for DX, be a little careful. You can pick up some evil habits that are hard to break. Actually, it is easier for many to learn code at

about 16 wpm from ground zero. Use my e-mail if you want to discuss it further.

As noted, Element 2 is not a huge problem. Element 3 does require some study of a kind you did for your drivers license and perhaps some other things. It is a bit demanding but not overly so. Element 4 can wait. As you cannot copy code more than an hour, Element 2 takes a week at most, and Element 3 makes admirable bathroom reading.

Go for the General off the bat, you will be a whole lot happier. If you pop Element 3, you get the Tech as a booby prize and can get on 10 meters. Set no little goals.

Dick NBK

Other than
> that there are folks out there I still enjoy the bands with. Both 11m and
the
> Ham bands.

I have monitored the channels now and then. I tuned in channel 19, for highway info because of the high winds - 35 to 50 MPH, on my way home from Oxford Sunday night. I lost count of how many times the "S---" word was used. Then I found the same language on the other channels, where there was local activity, it's a 45 minute drive so I had time on my hands. On another occasion, on channel 40, I monitored some 18/19 year old kid telling a much older adult "why don't you go and beat your wife old man". Yup, just what the little kids need to hear. Too bad the potty mouths, and other idiots, on 11m seem to far out number the few good operators left. Since you have friends on 11m, I don't understand how they can put up with all of the crap. I gave up on it, 11m, years ago and finally got back in to radio two years ago with a Ham license.

Last I heard was the "Alfa Tango" group moved their calling frequency because they could not talk over good old "Bob", while he was doing his thing. You seem to lack a little bit of knowledge Tim, there's more than 2m on the V/UHF bands, like 6m, 2m (which seems all you know about), 135cm, 70cm, 33cm, 23cm, and others right up to 24 GHz. I bet you don't even know that the UK has a 4m band, and in Germany you need a "special" license to use 6m.

I don't have any problem with a kid tuning in to any Ham band random. The probability that they will encounter anything like what is heard on 11m is almost nil. Now try that on 11m, the probability of NOT encountering a potty mouth is almost nil.

You forgot to mention APRS, so others can track you as you follow the
weather in real time on computer generated maps. No need to try to figure
out where you are when the nearest road sign is a mile or more away,
assuming of course you can even see it any more.

I was driving home from a work site, in northern Ohio, about a month ago. My route back to home, north of Detroit Michigan, took me through Toledo Ohio. I had my Icom 706g tuned to channel 19 monitoring for road info from time to time, and looking for contacts on V/UHF sideband. It turned out there was on tanker truck on south bound interstate 75 that dumped a load of chemicals all over the road. The local police closed down both sides of the highway from around 6:30 PM to around 11:30 PM if I remember right. All I heard were other truck drivers cussing about the delay, and the driver of the tanker truck in particular. I never heard anybody giving instructions of how to get around the road blocks. I did have a local Ham, in Toledo, who did provide instructions, on 2m SSB, on how to get around the road block and back on the north bound highway. He stayed with me on the radio for about 20 to 25 minutes as I drove around on side streets until I got back on the interstate. I wished I wrote down his call sign, so I could say thanks again here, he saved me a ton of time waiting in the traffic jam. When I tuned back to CB channel 19, all I heard was the same old crap, other truck drivers cussing about the road block, and still no instructions on how to bypass the mess. In this case I was far better off with my Ham rig than the other poor souls who were trying to get help on the CB.

>The idea that ispection stations and
>DOT and State patrol units will waste one single man hour or even one man
>second looking for "big radios" is a pipe dream.

The world may be changing too fast for you, friend.

They'll get the ID of the two drivers that the hams followed and recorded for several miles upstream of the scales. Cell phones and a list of "hot line" phone numbers come in REAL handy. Several Amateur 2-meter repeaters have installed a series of 900 numbers in memory for this purpose.

For instance, at the intersection of I-40 and I-85 in central North Carolina, there is a repeater with *911 for highway patrol, *912-*919 are reserved for other law enforcement.

Reaching DOT dispatch points and scales is a piece of cake, these days. If you're an over the road driver, be aware that the situation is changing. You can and will be stopped. You will be ID'd. Meanwhile, read the March QST for a list of do's and don'ts for hams when compiling evidence (like tape recordings) for the FCC. (Yes, this article deals specifically with 10-meter intruders).

QRM

Partial list of Atlantic Coast states with cooperative DOT:*

Georgia. Cell phone code *GSP
North Carolina *HP
Kentucky (Use Highway Patrol to relay to DOT, due to roll-by weigh stations)
Virginia *SP

*Last update June 99. Revisions welcome.

>where the truck is parked. There's 50 trucks minimum. There are also 2
>prostitutes and one candyman(drug dealer).

Feeling lucky, Ken?

Read the RAIN report, or the FCC Enforcement Log section of arrl.org.

The intruder listed as Louisburg/Cary North Carolina is a great example. The
guy was in a delivery vehicle with a route covering 100 miles.

You can run but you can't hide!

>Maybe congress will allocate funds for a KH-11 keyhole satellite
>tasking. That's what? 30 million dollars for one license plate from some guy
>who has a 150 dollar radio?

That's right. Get silly and throw around some meaningless numbers. It doesn't
change the facts. Maybe it makes you feel better, but you are deceiving
yourself.

> This will only work with someone using a base station.
>

Recent events demonstrate otherwise. More and more hams are taking to the road
with 10 meter gear tuned to 28085. Ditto for base stations.

See QST Magazine, March 200, for an article on the subject of 10 meter
intruders.

Must be a Toledo thing.
I never had a problem getting alternate route info around a city. Did you even ask? If you didn't, you are mighty presumptious. Most truckers don't HAVE to ask, as they already are aware of an alternate route, IF it is feasible.
Your post was only an attempt at patting your fellow hammie on his fannie. Good for you. I am glad another hammie came to your aid on your hammie rig. At least it kept your arrogance off of the cb frequencies.

# 2592. Re: Problem with Export Radios

Ah, yes, QRM, he was in a truck, and it was NOT a ten meter export radio he was utilizing now, was it? What, may I ask you, does this have to do with the subject at hand? I think that post is deceiving, if anything is. It may make you feel better, but again, it does not apply to "export 150 dollar radios" and you are aware of this. If one is squatting on the hammie band, he deserves what comes down. But don't try to make even a remote connection from a jammer on ten meter to an export radio operator on triple 5 or so.

I use old Royce radios on my dune buggy, I spray the mud off with a water hose. As a matter of fact I use whatever old radio I can get and just spray the guts real good with a silicone spray, I prefer the old royce radios though but I only use it to talk to the other people who ride where we do.

They'll ( "THEY'LL"? I ASSUME YOU MEAN THE COPS) get the ID of the two drivers that the hams followed and recorded for several miles upstream of the scales.(OK! Now what?) Cell phones and a list of "hot line" phone numbers come in REAL handy. (OK, still, I ask, THEN WHAT?) Several Amateur 2-meter repeaters have installed a series of 900 numbers in memory for this purpose. (One more time, SO WHAT? Unless the LEO witnesses the act first hand, whatever your hammie superhero says is HEARSAY. I will not differentiate it for you, but you scenario means nothing.)

What? Around the Murder City he had to go to Ham to get away from the
local potty channel or 19 ?

The "potty channels" start below channel 1 and extend past channel 40.
YOU don't really believe that. If you do, then you proved you have no
clue whats really happeing out there on the bands.

I tell people that GOD has a penalty on their potty mouth, which is a
strong one.

I guess GOD doesn't care because nothing seems to be getting better.
I guess you lost your faith long time ago. Too bad. It's always getting
better. It comes from within.

In fact the worst offenders seem to be the young people. I guess they
need to practice somewhere.
  You need to go to Oakland County to Cooks Dairy Farm and get a
Vanilla double cone for me in a plastic cup and eat it slowly!
You going to spring for the coin to pay for it? 8-))
  Where did the potty
mouths on the Ham freqs. come from

11m maybe. Old habits die hard.
Of course, you had to give credit somewhere to eleven meter, only this
offered the proverbial slam without making it look intentional. Why ARE
you in a cb room anyway?

since your in my kill file lenad i only seen what dave requoted. to me
555 sounds like some of the two meter repeaters when there being jammed
and kerchunked. least we can walk over old bob and keep right on
talking.

Last I heard
(There you go again, repeating things you HEAR) drone, drone, drone,
drone,

was the "Alfa Tango" group moved their calling frequency
(I promise you this isn't true)
because they could not talk over good old "Bob",
(For the serious DXER, Bob has NEVER been a problem, another promise, I
assure you)
while he was doing his thing. You seem to lack a little bit of knowledge
Tim,
(And you seem to lack a lot)
there's more than 2m on the V/UHF bands, like 6m, 2m (which seems all
you know about), 135cm, 70cm, 33cm, 23cm, and others right up to 24 GHz.
I bet you don't even know that the UK has a 4m band, and in Germany you
need a "special" license to use 6m.
(AND in Britain, you need a permit for a TEE-VEE, so waht? What's your
point?)

I don't have any problem with a kid tuning in to any Ham band random.
(Try to keep them there before they die of boredom and because they
don't know what a "bunion" is yet)
The probability that they will encounter anything like what is heard on
11m is almost nil. Now try that on 11m, the probability of NOT
encountering a potty mouth is almost nil.

Agreed. Go straight to the freeband.

kill file off for a second

>From: "Leland C. Scott"

hey leland. i'm aware of all the bands. perhaps the hams in my area arent though because they see very little use. as far as the over seas bands go, sure i know about them. after all i speak with people in those countries daily on 11 meters and get to speak with them about such things. maybe in your local area things are clean but wake up and smell the whole wide world. there have been alot of highly publicized vhf/uhf problems here in houston as well as california new york and other places where theres any big population. ask the people in berkely california. as far as the alfa tangos go, your just repeating what you read here on the internet like you do everything else. its not true.

Thanks.

> At least it kept your arrogance off of the cb frequencies.

Think so? You should have heard the arrogance, egos, bad attitudes etc. on the CB that night. It makes what goes on in this news group look like a Sunday school class. I did not have to put up with any of that crap when I asked for help on the Ham bands. Also did not have to worry about some CB jerk deliberately giving wrong directions either, to see how much he can add to the mess for the fun of it. Just friendly directions without the 4 letter commentary, sound effects etc. from a local Ham.

Hi Mad Dog,
I have a new Galaxy 99V and yes it has the 3600 board in it and it drifts
from hot to cold and i had a 88 that i just sold to someone that had heard
my 88 and said if I wants to sell it he would by it, he drives a rock
ruck( pretty bumpy ride) The guy loves that radio he had a 148GTL before
the 88. The thing about Galaxy is not the spec"s it's the AUDIO transmit
and receive and has the potential for even improving them more
that why the radio has been around for a long while and will still be!
There are lots of radios that will out perform a Galaxy but to my ear none
sound as good and is as easy to use. Its makes me feel Real Good when i talk
to Europe on 21 watts and they come back to me Loud and Clear as a bell!

Well Leland, when truckers are lined up stuck bumper to bumper, they
are going to voice their discontent about the situation on the radio.
This is not a new revelation. If you didn't hear of an alternate route,
chances are, there were none.

Okay, I guess if a guy wanders onto 10 meters he deserves what he gets (if he gets caught) but I see nothing wrong with stealing. Freebanders stole frequencies from government services and others below 1 and above 40. Tough luck, I say. If it ain't nailed down, we'll take it. (Hey, are you usin' that Mercedes?)
Twistedhed

Whats the matter Dougie, you that bored again? So you're a thief and a limp wrist, well, aren't you just special? You know, that makes you a TWO-time loser, haha! But thanks for the post, I just figured out how to killfile anything coming from that "anonymous" server you're using. You have forging ability (although, poor), but anonymity, you don't. Besides that, I KNOW how to spell. Don't bother. You're gone, again!

YOU don't really believe that. If you do, then you proved you have no
clue whats really happeing out there on the bands.

I monitor the same band you do. Same old crap, and when the skip is in
there is just that more of it.

Hmmm..I dx plenty and the hate and discontent is held to a few certain
frequencies. Like anything else, seek and you shall find.

I guess you lost your faith long time ago. Too bad. It's always getting
better.

You would never know it from all the people on this news group trying to
convince me, and others, that violating Part 95 is just fine. I don't
call that "getting better".

You conveniently lopped off the last statement of my paragraph where I
stated, "It comes from within". Naturally you can't see the light or
anything getting better, you lost your faith.

Maybe you should tell all those users of amplifiers, freebanders, etc.
that "GOD has a penalty" on their actions, and then see what that gets
you.

I didn't bring God into this conversation. Look again.

Who knows, it might do some good. It looks sort of dumb when you imply

I never implied anything.

GOD will punish them for their potty mouth on one hand, then stick up
for the illegal operators on the other, and you were the one a while ago
lecturing me about creditability. Gee, you talk about double standards!

Show me where I said anything of the such.

Of course, you had to give credit somewhere to eleven meter, only this
offered the proverbial slam without making it look intentional.

Who me? Naw. I just repeated what the old timers say.

Like I said, keep repeating everything you hear.

And truth be told, many old time Hams got their start on 11m, so my statement is not really out of line is it?

Nope. Just out of context.

Why ARE you in a cb room anyway?

Why are you here?

I asked you.

Yeah? Hummm..., all I do is flip to one of the legal 40 channels at random, wait a few minutes. I don't call that "seek and you shall find", it just happens all by its' self.

> You conveniently lopped off the last statement of my paragraph where I
> stated, "It comes from within". Naturally you can't see the light or
> anything getting better, you lost your faith.

You mean that CBers will clean up their collective act, yes I have lost my faith that will happen with some. Thats why the good operators need to get more vocal, more active, and take back what the pirates have stolen from them.

> I didn't bring God into this conversation. Look again.

I did. You going to tell me you did not write the following?

-> I tell people that GOD has a penalty on their potty mouth, which is a <-
-> strong one. <-

> I never implied anything.

Sure you did, even if you don't realize it.

> Show me where I said anything of the such.

About the creditability issue? I'll waste the time to find it because it's there. I already nailed you once on another slip at that time. Do you really want me to hang your dirty laundry out for others to see? I don't mine doing it of course.

> Like I said, keep repeating everything you hear.

I do, but you don't like it.

> Nope. Just out of context.

Truth hurts, but you will get over it.

> Why ARE you in a cb room anyway?

I don't need a reason, nor anyones' permission to be here.

Sorry. That is bad logic and you're not selling that hog!

A problem of any nature within Amateur Radio does not constitute permission for unlicensed operators to go above 28.0 MHz.

>
>The crap I hear daily on 14.313 and nightly on 75 meters is worse than
>anything
>I've ever heard come out of a CB speaker.

Thank you for your opinion. If you don't like it, don't listen. But this has nothing to do with needing a license to be on 10 meters, so drop the pathetic attempt at a smoke screen.

Look you guys are going nuts over a few export radios while the FCC
re-allocates 220 to 222mhz to land mobile something.
There is also the fact that people who are working toward their ham
liscense can buy Ham equip but cannot transmit until he is in the FCC
database. Also the ham community does allot of build your own and
experimentation. Do you want laws banning equip for what it can do or punish
those who abuse the seperation of bandwidth or cause RF interference.

Never said it was. My point was that it's very hippocritical of many hams to constantly criticize the mayhem on the CB band when they have problems of their own to worry about it. Who annoys more people over a wider geographical area? the local CB bubba, playing noise toys on Channel 19...or Big Al, with his multi-KW jamming tapes on 14.313 & 3894.5?

>>The crap I hear daily on 14.313 and nightly on 75 meters is worse than
>>anything
>>I've ever heard come out of a CB speaker.
>>
>
>Thank you for your opinion. If you don't like it, don't listen.

Now THERE'S great logic! I'll tell "you CB'ers" what to do...but when you point out similar problems on the ham bands, I'll simply say "If you don't like it, don't listen."

BTW, I am both a General Class ham and a CB'er...so save your assumptions about how I'm "anti-ham", "just a CB'er", etc.

10 meter is BORINGGGG first of all. Second if those guys are driving around
at 28.085 they must not be enjoying there hobby. 10 meters is dededot
territory except maybe some sideband voice at 28.3 and ONLY if you get your
code exam done.
Honestly fi those guys spent more time on 220 to 222 it might have been
there for me when I get my liscense.
Besides the dirty RF is from cheap domestic cbs hacked by some clown then
plugged into a linier. The exports are clean.

Not quite. The distinction is bandwidth, essentially 1kHz and 6 kHz.
Above 28.3 (200 watt limit until 28.5) you will hear SSB, SSTV, and other
wideband modes including Ancient Modulation although Antique Mary users by
gentleman's agreement stay to the high side. In the narrow band, CW will
predominate but various forms of RTTY and data are around. In fact by the
voluntary bandplan 28.085 is in data country.

The trend in data of recent years has been toward narrower bandwidths but
the intruders are sparking a revival of the Ancient Modulation of data,
850 hz shift RTTY. Tears hell out an AM channel.

Hmmm..I dx plenty and the hate and discontent is held to a few certain
frequencies. Like anything else, seek and you shall find.

Yeah? Hummm..., all I do is flip to one of the legal 40 channels at
random, wait a few minutes. I don't call that "seek and you shall find",
it just happens all by its' self.

Agreed. Thats why you should go straight to the freeband.

You conveniently lopped off the last statement of my paragraph where I
stated, "It comes from within". Naturally you can't see the light or
anything getting better, you lost your faith.

You mean that CBers will clean up their collective act, yes I have lost
my faith that will happen with some.

I mean nothing of the sort. I mean exactly what I say. Don't put words
in my mouth. You lost your faith, which explains everything else that is
wrong in your life, including you finding fault with others.

Thats why the good operators need to get more vocal, more active, and
take back what the pirates have stolen from them.

Are you referring to hammies and those freqs that were taken because of
inactivity?

I didn't bring God into this conversation. Look again.

I did. You going to tell me you did not write the following?

HAha! Again, look close. No..I didn't write that.

I tell people that GOD has a penalty on their potty mouth, which is a <-
strong one. <-

Or that.

I never implied anything.

Sure you did, even if you don't realize it.

Show me.

Show me where I said anything of the such.

No. Anything about what you claimed I said.

About the creditability issue?

No. I ALWAYS call you on that. On the God issue.

I'll waste the time to find it because it's there. I already nailed you once on another slip at that
time.

No slip. An honest mistake. And an apology that followed. See Leland, I can admit when I'm wrong. For you to bring up a post I mistakenly thought you though you wrote, after an apology was issued on my behalf after discovering my error shows what, besides your true colors and grasping at straws? That's what you consider NAILING me? MMmph! Ok!

Do you really want me to hang your dirty laundry out for others to see?

What dirty laundry? Me mistaking a post? Give me a break. Anything I do, I stand by. I addressed this many times.

Dom don't mine doing it of course.

Knock yourself out.

Like I said, keep repeating everything you hear.

I do, but you don't like it.

Actually, I never thought about "liking" it or not. Just doesn't apply. It's false logic.
And it makes you a sheople.

Nope. Just out of context.

Truth hurts, but you will get over it.

It does, which is why you have a hard-on for us cbers.

Why ARE you in a cb room anyway?

I don't need a reason, nor anyones' permission to be here.

Nope. You don't. But this is a discussion forum. Can't answer a simple question without getting defensive?
S'all good! "Nuff said!

See the Ham can only go there once he passes his morse code test. Very prestigious. He is now a REAL ham!
He then goes into VIRGIN bandwidth where the HAM ELITE reside and roam. He will hear the erudite musings of the old Ham SAGES. The Hams of old, the Hams of Renown on the sidebands above 28.3. Then he will try to decipher the code made by knarled hands that once shook hands with Giants like Marconi, Tesla etc.
As he works down the spectrum hesitant like he is on his first date then it happens. Usually near 28.185, the pubic line of the 10meter band. WWAAASSSUUUPPP!!! This here is BIG DADDY SUPER TRUCKER SAYING HHEEELLOOO WORLDD! I'M WORLD WIDE!!
The roger beep sounds like fingernails on a blackboard as the Ham now busts into tears. He feels soiled, dirty, violated!!!! It's worse then rape, murder, it's even worse then(dare he say it!) buying and SUV!!!

Am I right?

Have a very nice set of Browning Golden Eagle MKIII 23CH CB. It comes with a Siltronics 90 VFO and a UGLY D104 mic. Why is it ugly?? Someone painted the base gold and added some kind of AM and SSB filter to it. You can see pics of the set at http://community.webtv.net/KF6IKC/doc The VFO was packed away when I took the pics but it is in good shape too. I would rate this set at a 8+. Price is $400.00 + boxing and shipping from 96003. If you have any questions I can be reahed at (530)241-0843 or email me at KF6IKC@webtv.net

Take care,
Stan

> cost like 10 bucks.

From http://www.arrl.org the Now You're Talking is $19. The General
Manual is $15 and their CW is $12 on cassette, $14 on CD.

As I suggested to Dudley, do yourself a favor and do Element 1 (the code
test) as well as Element 2 (Tech) and Element 3 (General) together at one
sitting. The Tech is not and never was an entry-level license -- it is
for your wife to get bread and milk as you drive home.

The Tech with the CW test still does get you ten-meter freqs to use your
existing gear (you and I both know better).

The process is explained on the ARRL site. Exam samples are on
http://www.qrz.com and Morse Academy, a very well-respected piece of
software, is on http://ah0a.org.

If all else fails, use my e-mail. I am not recruiting but I will help.

He will not have a clue about 222-225. That is a Region 2 (the Americas)
band not available to Europeans. As it happens, we got some data
privileges in the 218-220 band so the loss to UPS who did not use it, is
pretty minimal.

We have a number of Region 2 allocations in the VHF area that are not
international, not the least of which is 146-148 MHz.

Thanks Alan

Now that I have those numbers I am even more confused.

I have a moonraker 4 that was robbed of its quad and vertical elements and given a 4th element.

This is now a 4 element horizontal antenna with the same spacing as it had before it was modified.

My questions now are. Is the spacing 65-56-65 still ok and what should the element lengths be. I had issues with getting it setup as it was marked off by the person selling it to me but it didn't match and wasn't very directional. I kept the spacing and adjusted the length to match a maco m104 and now it has directivity but the center frequency is at 28.200. What's the best way to drop this 700 KHz

You can thank the ARRL for that one. Back in the mid-80s, the FCC strongly suggested that the ARRL moderate their adamant stance against a codeless class of amateur license which would have been called the "Communicator" class.

The ARRL flat-out refused. The result was the loss of 220-222Mhz.

you burnt the "polarity diode"
it should be located in the rear of the radio if you open up the unit you
can basically follow where the v+ "hot" comes into the radio and locate it
by looking on both side of the radio the component side and the circuit
board side. the first diode "black with silver band" in line is probably the
culprit. remove and replace it and it should be ok ... "Gary Lawrence"

# 2651. A weird mic wiring question

Newsgroup: rec.radio.cb
Date: 2001-02-27 03:43:17 UTC
From: Frizz <none@none.com>
Message-ID: <97f7hv$qin$1@bob.news.rcn.net>
Source record: 74334

Doesn't look like I am gonna get a reply from the ham groups and I guess this would fit more over there but I will give this a try anyways. I have an astatic d104 silver eagle desk mic with a 5 pin plug on it wired to a Uniden washington. This mic is interchangeable with several of my other radios with this plug so I must keep in on there. Currently, I am using a Yaesu FT-411 HT for 2m as a base station with a power supply, etc. It is easier to use a desk mic the way I have it set up and I want to use the d104 on the radio. I was using it on there actually, however, I went to make a more permanent connection with a panel mount jack and now the thing won't work. It will key the radio but no audio. I have it wired up with the Red and White wires going to the tip of the HT's mic connector and the Black and Ground going to the ring of the connector. This was how it was wired before but when I went to make the change over, something went wrong and now it won't work. I have rewired the mic plug on the d104, redone the plug going to the radio, cleaned contacts, tried a bunch of different reasonable connections with no luck. So, HOW DO I DO THIS? I am about to throw a d104 out the window and if this doesn't work then I will gladly let someone know where to catch it. Thanks and 73.

PB from KG4 land.

If I remember correctly...you have to add a resistor or something like
that in order to wire a microphone to an ht. Not sure of the
specifics but seem to recall something like that years ago when I used
a microphone on an Icom 2 meter ht.
I may be wrong and I am basing what I said on my past experience with
wiring microphones to ht's.

Also the impedance is important.

Not much help but at least maybe it will get you thinking and
searching the internet.
Good luck.

I know this is not the same microphone but I am cuting and pasting the
following to show you what I am talking about. You can apply it to
your situation. I am not sure but you may have damaged the radio???
NOT SURE...just being cautious. Read the following and you will
understand what I was talking about in the previous post. THis is
similar to what I had to do for my ht years ago.
-Sam

---
---

For those that wish to connect a ft 411 to packet via a mfj tnc the
following modifications are needed. In the black lead from the tx
audio out insert a .01-0.1uf cap. In the red lead from the ptt, insert
a 2.2k rst.

Then combine these into a common single lead connected to the tip of
the small mike plug. The yellow rx audio goes to the tip of the large
speaker plug. And the shield goes to the ring of the large plug. This
information can be found in the 1989 august issue of 73. Page 58 it
workes for me.

h,

SSB voice goes quiet a ways beyond 28.3--all the way to 29.000. At
29.0000 you will find a few AM folks, just above there FM simplex
starts, then you'll find FM repeaters. Some of the local guys hang out
around 28.600 where we discuss the activities, news, ongoing projects
of the day, and so on. It's not boring to us.

h,

Two Twenty MHZ is old news. The truth is, I never used it because, IMO,
it was/is redundant to 2 meter. I see nothing wrong with a prospective
ham buying a rig so long as he obtains his ticket before using it.

Without the "export" radios, it would be more difficult for bandits to
encroach into bands for which they are not licensed. This has nothing
to do with hams building, testing, and experimenting with radios and
related equipment. The enforcement of regulations against abuse,
"stealing" bandwidth, and RF interference are a separate issue.

# 2657. Guys, I need help with my antenna system.. Please read

Newsgroup: rec.radio.cb
Date: 2001-02-27 05:02:31 UTC
From: MC Turner <C_Turner@ix.netcom.com>
Message-ID: <HxGm6.6390$Ye3.1428736@news1.rdc1.az.home.com>
Source record: 74339

I used to spend alot of time on this group. I try to help people when ever I can. I hope you guys can help me..

I have a 45 ft Free standing Rohn tower. The Tower is in 7 ft of earth with concrete filling the hole about 4ft up. There is a 10 ft pole ontop of the tower. I have a Sigma 4 3/4 wave antenna. It is allso known as a LW150. It is 32 ft long. I use Belden 97% shield 8U coax with amphenol conectors.

This antenna is a major pain in the **&*^% to tune. The Gamma must be almost all the way in to achive a good match. I am confident the gamma is set right. The radiator is impossible to set. The only way I can get a good SWR is adjusting the pipe that slides into the tower. If I adjust that pipe/antenna up and down I can get it to match flat. In otherwords I am raising and lowering the entire antenna and top mast section to tune it. Again. With the mast all the way up the antenna WILL NOT tune. I must drop the mast 3 feet down into the tower.

When I adjusted the mast down the SWR came to 1.2 on ch20 and 49 ohms. I used an MFJ analyzer with digital readout. My Bird 43 shows 0 reflected power.

The problem: I BLEED like crazy. Even a modest radio will bleed bad on the people within 100 yards of me. Forget about running power. I have tried RF chokes,beeds, different phones and inline filters. NOTHING works at all. My station signal is VERY clean. I have a scope and use about 15 different radios. Most are old tube radios with stock mics and NO over mod.

If I run my coax into a Cantenna Dummy load I do not bleed at all. Not even on my own phones. I can load up a SB221 into the cantenna with NO interferance problems. Hook up and barefoot radio to the antenna and I bleed. I have used 3 types of TVI filters and I do not beleive I have a TVI issue.

Ok so now you know my setup and my problem.. What is the solution? I normaly can stop any problems with Chokes and grounding..

The only thing that strikes me odd about this is the fact that my antenna will not tune with the mast up. It would seem that by me tuning my mast for SWR that I have some problem. It is NOT grounding. I have checked. This antenna is very dependant on mast length. It appears that the antenna is using the mast and tower as a radiator. If that is the case then I would tend to think that is why I bleed. What use is all that tower if I am going to transmit off the lower sections at ground level.

Sorry for the long post but I need some ideas by some experienced people on this forum.

MC

# 2658. Re: COMMUNISTs & Interpersonal Skills

Newsgroup: rec.radio.cb

Good Question. I think I'd like to talk about it....
I'm from Florida:{) Truth is, I'm not a ham. But, I am a distant cousin.
I'd probably say that I'm at best an aberration or variant on the theme. I
started as a toddler when my Dad, an electronics specialist, explained Ohm's
law to me on a napkin in the local Jack-in-the-Box. Funny thing, we never
played ball or what I always envisioned other Father-Son's doing but it was
a bonding event & I enjoyed it.
I spent many years working for Gov't agencies in the communications field
though I'd rather not discuss it. My degree is in technical communications.
And, I've studied amateur radio for a few years out of pure, unadulterated
curiosity. I guess that's the definition of a hobby. Anyways, I decided
that I should get my liscense. Why the heck not?
I'm pretty old-fashioned and try my best to hold on to my idealism.
That's why it's disappointing when folks lose their temper (or appear to in
text) on a good NG. Even the age-old code vs. no-code discussion tends to
be unnecessarily controversial. It's quite simple to me. CW is, to the
best of my knowledge, the most basic form of radio communication in history
as well as extremely presistent. Hell, even James T. Kirk remembers morse
code from his, "days back in the Star Fleet Academy";{) So there it is.
I'm a hams worst nightmare: a non-ham who knows code! Ha!Ha!Ha!

Respectfully,
Drink

MC,
When all else fails, read the 'book'. I'd go through the
instructions
again. Pay particular attention to mounting/tuning instructions, and
don't take anything for granted. Sometimes the instructions are just
a
bit ambiguous (like you haven't done this already, right?).
It sounds like it's using the pipe it's mounted on as a
counterpoise.
If it makes good contact with the tower, the tower is then part of the
system. By adjusting the pipe's length, your actually 'tuning the
antenna. So, it looks like you either use a 'short' pipe, or add
another
few feet to the pipe and adjust for the next 'resonant' point higher.
Just in case you didn't know, concrete is an insulator. Your tower
may not be grounded very well at all. You might try adding several
ground
rods a few feet from the tower, or several radials. That may help in
tuning your antenna too.
'Doc

A 1:1 Unun (unbalanced-to-unbalanced) might help. It's basically a choke made up of ferrite beads at the base of the antenna that helps to prevent signal from propagating back down the outside shield of the coax cable. Make sure you don't have any corrosion anywhere on the antenna or connectors. You can find some info at http://www.radioworks.com/nbalun.html#RFIapplications

Source record: 74345

Looking to convert a "competition-style" RF amplifier. The amplifier is not working at this point in time. I have found that the transistors are bad. This one is the 2x6 now (2-- 2sc2290's drving 6-- 2sc2879's). I was wondering if it would be a big deal to just switch out the 2879's for 2290's, or will other components have to be changed?? I want to use the finished amplifier (2-- 2sc2290's, driving 6--2sc2290's ), to drive a 16 pill... I don't want to buy another driver box (i.e., 2x4... 2-- 2sc2290's, driving 4-- 2sc2879's). Since the 4-2879's (that are rated individually for 120w), total up to 480w, and the 6- 2290's (that are individually rated for 80w), ALSO total up to 480w, I feel the finished 2x6 box would make a good driver for the 16.. ALL comments, and suggestions welcome
WW373

Bingo.

I have never been a big fan of running unbalanced line up a tower. You
must make sure your counterpoise/ground-plane is properly tuned
=before= you tune up your radiator, or your line and/or tower will
radiate. You could also try adding some ferrite, randomly spaced but
less than 1/4 wavelength apart, along the entire length of your line.

Some in this ng will tell you that a radiating coax cannot generate
harmonics. That's fine for them. But when the line stops radiating so
will the bleeding.

Greetings!

I had a chance to call someone direct at Uniden and inquire.

They aren't dropping the CB line, just not introducing any new models
for this year, as of spring 2001 - no new radios for the market from
Uniden. So it looks like spring will be quiet. Not sure of the Summer
and subsequent seasons.

So far, it's Status Quo from a Sales Clerk over the phone.

One comment that was made, "CB's are still quite a popular line, I
don't see any reason or means in the foreseeable future that they will
no longer make CB's".

So, there you have it.

>an clip from the F-R-S web site:
>
>Smells of REACT? For your information the "www.F-R-S,org" site has NOTHING
>to do with REACT other than it's author is a member of REACT.
---

This sounds familiar! REACT steadfastly claims that it has never advocated Channel 1 for emergency purposes. (Even though we have waved the famous FRS media release in their faces, they still deny it).

So here we go again. Like the media releases from last summer, we get a denial that this has anything to do with REACT. Same story, different package. (With a bright green background.) And, like the REACT and PSRG sites, it's either difficult or impossible to locate the individuals working the controls behind the curtain.

And we still have the same problem with this site that was evident in the June and July media releases from REACT:

If you advocate Channel 1 Code 0 for emergencies, there will be nobody listening. You should use Code 1, which is the same on all FRS radios that have CTCSS. (Those that don't have CTCSS are fading away, and are not likely to be used for emergency purposes).

Folks, the bottom line is that this lulls the public into a false sense of security. The comparison of FRS-1 with CB-9 is very inappropriate. Until REACT members dedicate themselves to monitoring FRS-1, they should stay out of the picture.

Websites are easy. Media releases don't take a lot of work. Posting to NG's doesn't accomplish much. The real EFFORT is turning on your radio while at home or driving, and monitoring singing kids, cussing kids, and endless call tones, in the hope that you MAY hear an emergency. Without a CTCSS code, who's gonna keep the radio turned on?

REACT abandoned Channel 9 years before it should have. The organization moved to the "Travelers' assistance" channel on GMRS, which REACT uses for its own internal purposes. There are not many travelers using GMRS, plus there is no

reliable Repeater Directory for the public. So REACT is safe--you can claim lots of monitoring hours on your web site, but you don't have to *do* anything!

Recently, REACT has been challenged on this at the National level, as well as in e-mail to the "teams". REACT knows that if it seeks another Presidential Service Award for it's 40th anniversary (as it did for the 20th), it is going to run into stiff opposition. Magazines like Popular Communications have been alerted to what's going on with REACT. The ARRL and SKYWARN have been cautioned about getting dragged too far into the mud through their individual agreements with REACT.

I'm calling a spade a spade, people. This sudden interest in FRS is a selfish move with the goal of getting some free publicity, just as happened last June when the media releases were reported by several magazines. REACT has dropped from a high of 70,000 dues-paying members to 4,000. REACT is in a desparate fight to survive. It outlived its purpose about 1994. GMRS (as an emergency frequency) fell on its face. The last hope for the REACT organization is to turn to FRS and stir up interest with the public.

The problem is that REACT wishes to dump a lot of publicity-seeking words onto the Internet, without taking a leadership position by announcing that 300 teams around the country (4000 members) are monitoring FRS-1 for emergency traffic. If you simply tell members of the public to organize themselves into neighborhood teams, who needs REACT?

You don't move a string by pushing it. You have to get OUT IN FRONT.

Hawkins, Leef, are you listening?

You didn't get a response from the hams because they don't use D104's very
often. If you know you have the pinout correct check for continuity. If you
aren't sure about the pinout, go back to the original setup with the other radio
that worked and determine the correct wiring. Failing that you can buy a ready
made mini hand mic for the Yaesu from MFJ for about 20 bucks and if all else
fails, you can take it apart to see how it works. Since you are at Guantanamo
Bay, there ought to be some more knowledgable radio guys around who can fix this
for you in a second.

# 2674. Stop The Sale Of Export Radios?

Newsgroup: rec.radio.cb
Date: 2001-02-27 21:04:52 UTC
From: twistedhed@webtv.net
Message-ID: <3a9c1674$1@news2.mibx.net>
Source record: 74358

I was just thinking. You know, the reason why there are so many truckers who land on 28.080 and don't know it is because of the flood of export radios. They just turn the bandswitch knob till they find a clear channel. They don't know any better.

Places like Express Electronics, Bills 2 Way, and Fire Comms push these radios openly. They call them "ham" radios or "10 meter" radios (and sometimes they don't even bother trying to hide the fact that they are meant for CBers, LOL). It is pretty damn commonplace to find truck stops selling these things, and CBers "upgrading" to them.

What's funny is that guys like me, when they first get these rigs try them on all bands. I still ocassionally like to get on 28.350 and fart in some hams face.

Anyhow, we all know the argument that you should "punish the user not the rig" is a big smokescreen us outlaws use to keep this stuff in circulation. I think if the hammies were smart, they would attack the problem at its source. Maybe stage a raid on Sean's place (since EEI claims it is the biggest dealer of export CBs in the USA) and really crack down on internet sales.

But what the hell do I know? I'm just an outlaw in Florida.

Source record: 74354

Yeah, like everyone else says, get the book and study. Actually, since I was in touch with many CBers that knew there stuff, I hardly had to look at it. The Now Your Talking book goes into a hell of a lot of detail. The W5YI and gordon west types just give you questions, the answers and a short explaination. Hehe, I studied on the way to the test too, it was damn simple. Getting money for a radio, that's another story.

As usual, Ken, you got it backwards. The A and B pertain to the propensity to cause interference under Part 15 rules which is hardly the problem here. And CB is definitely not Part 15 and in this case probably not Part 95 either.

Some ferrite beads on the power cords and speaker wires will more than likely cure it. If not, insert two straight pins about 7' 3" apart and cut them so that the ends fall below the plastic covering of the coax feedline to the antenna. If you make a good guess on the distance apart, he will hear everything, won't talk out of his back yard, and still have an admirable SWR.

# 2682. Re: Truckers and FCC enforcement

Newsgroup: rec.radio.cb

Yes but these issues only occur when the radio is keyed up and set for a Ham freq! But an export radio being sold or used in a vehicle within the legit freq is NO threat. They are 10 times better then the legal ones Hacked by some clown to transmit 15 watts EVERYWHERE.
You want to see ALL 2m mobile stuff BANNED even with a Ham liscence?
Watch the laws written for cell phones. The way they are written is vauge and can be interpreted as banning ALL transcievers, some have an exception for truckers which means that your legit mobile Kenwwod 2m or duel band rig can be criminal while the trucker with the dirty linier goes scott free!
Just go after the guy encroaching on your territory and forget the cb bandwidth and what the other guy may be using.

# 2684. Re: magnet mount

Newsgroup: rec.radio.cb
Date: 2001-02-27 21:49:28 UTC
From: Mad Dog <lgssl@netzero.net>
Message-ID: <97h9d8$phbie$1@ID-20128.news.dfncis.de>
Source record: 74365

The magnet-mount is OK for the enthusiast, they use a capacitive-inductive coupling to ground the
antenna to the body of the vehicle.
Dont remove the plastic covering the bottom side of each magnet or you will scratch the finish
on the roof.
DO NOT attempt to run any power "such as a linear" with a magnet-mount, you wont like
end result.
SO-239 refers to the the male connector that attaches the coax, 3/8 refers to size threads in the base of the mount where the antenna screws into, it's all good man.
When you decide to get serious, build a roof rack that you attach a bracket to, this will eliminate
drilling thru the roof.
Get a center-loaded open-coil competition stlye broad-band 1/4wave design "now that's a
big word".
Use quality coax such as "Times LMR 400" with "Amphenol" connectors.
A chain is only as strong as it's weakest link, consider every component in your system as a link
in the chain...................

> is 32 ft long. I use Belden 97% shield 8U coax with amphenol conectors.

This all sounds great, I'll bet its a good installation.

>

> used an MFJ analyzer with digital readout. My Bird 43 shows 0 reflected
> power.

The Sigma 4 or LM150 is a inferior antenna. I say this not to piss you
off
but to convey my experiences and opinion.

The Sigma 4 is 3/4 of a wavelength long to allow for a inexpensive
impedance
matching device (the gamma match) and base assembly mounting design,
that
could be easily and inexpensively manufactured. Performance thrown to
the wolves.

The hoop assembly is not a matching assembly or inverted ground plane,
but
a radiation pattern restrictor, that allows the 3/4 wavelength long
antenna
to be easily matched as a 3/4 wavelength, but restricting the antennas

energy
in both transmit and receive to try to be that of a 5/8 wave length
vertical.
Because there is not ground plane elements or counter poise, the mast
and
outside coax is the counter poise, or other half of the antenna. So
energy
is being transmitted off the tower and coax, causing some, not all
neighbor
electronics interference. And this is why mast height will affect the
SWR.

If you look at all the other verticals, a insulator and a clever base
assembly
is designed to allow a 1/2 or 5/8 wavelength antenna to be mounted, AND
have
the impedance matching device/circuit match the coax to the antenna.
Most CB
antennas used 14 to 20 gauge wire, in the impedance matching circuit
that
had a lot of loss (internal resistance) and would not take a lot of
power.
Also this base assembly design needed to have the least amount of stray
(or unwanted capacitance) capacitance, which was not designed in, so
some
loss was seen.

I installed a Sigma 4 right out of the box, reading the instructions
very
carefully, ran in to the same thing. As the mast was extended to a full
30
feet the SWR went crazy, dropping the mast down some reduced the SWR. So
again the mast is used as part of the antenna with the Sigma 4.
How wonderful!!!!!!

After changing the coax, checking all the dimensions, and connections
no cure could be found. Except replacing the antenna with another
antenna.

Maybe this is why the hams don't use this antennas. But they use all
the other types of antennas that the CB'ers use.

The Sigma 4 WILL in time come apart if assembled per the assembly
instructions, using the supplied cheap sheet metal screws or cheap
mickey mouse hose clamps.

I recommend going to a 5/8 wavelength ground plane antenna.

Jay in the Mojave

I disagree. The result will be peaked and tuned Cobra's which is basically turning a crap 4 watt cb into a crappy cb with a VERY dirty final @ 20 watts.
The funny thing is I own an export and my favorite thing about is is the quality reciever. While the duel finals are not legal there very clean and when I get my Ham liscense and code endorsement I can legally plug in a CW thingy into the CW port and use it legally on the upper bands.
Also ANY law will affect HAM equip since many Ham transcievers can be operated illigally. For instance any equip that can send voice where ONLY CW can be sent will have to be reengineered and that raises costs.
Also if these export radios worked @ 220 to 222 mhz then the FCC would have said "Hey lots of activity here let's leave this to the Hams" instead of taking it away.

Either an SO-239 or an NMO will work just fine, but make sure the mount diameter is large enough to hold the antenna at high speed. That can be a problem. Don't buy the mount and then try to find an antenna to fit it. Find the antenna you want to use and then find a mount suitable to the connection and the wind load.

That's true! That's why I usually pull over and get a map.
CB and Ham are HOBBIES! Everything else is what we tell our wives WHY this is such a good Hobby and how it will Pay for itself:)
Honestly a good map would have been allot cheaper then an Icom by lets see a grand vs 3.99 for a good map.
AND all the info you needed would have been on the AM band from the reciever that came with the car for FREE!
When I go to NYC I listen to 770 ABC. In 7 min I get more info then on ANY HAM or CB freq ever could provide.
A cb is required for many warehouses that have u set a freq then wait to get a dock. The reason I bought an export is so me and my buds can chat from farther away and mostly because I WANTED IT.

Source record: 74397

Hello Tim: Yes the 20 meter 5/8 is a dousey!

I have taken it apart, and the photos didn't turn out. The base assembly that held the 40 foot vertical element up, was not a permenant design. It took up way to much space as compared to the smaller 5/8 antennas.

The M5K-20 was 490 inches, or almost 40 feet tall, with 4 each ground plane radials approx. 16 1/2 feet long. It used 1 3/4" and 2 1/4" diameter aluminum tubing with a wall thickness of .250 inches. The ends had to be machined or bored open to allow the pieces to telescope into each other.
This allowed the normal M5K vertical element to fit inside the extended vertical tubing. The Top-Hat radial lengths where doubled. It looked like a big Mastodon 5000 (M5K) should have mounted it on the barn roof and taken more pictures. But I will next time its assemblied. Honest!

A real monster, but worked great on 20 meters. I had a remote antenna tuner mounted at the antenna, allowing the monster vertical to be tuned to 40 thru 10 meters. Because it was literly taped together with 2x4's as the insulator, it didn't stand a chance in the wind and sun for very long. But it did prove the concept that a long vertical would work, with a large counter poise.

# 2703. Re: Truckers and FCC enforcement

Newsgroup: rec.radio.cb
Date: 2001-02-28 01:06:31 UTC
From: Jerry Oxendine <joxendi@bellsouth.net>
Message-ID: <3A9C4F17.DE0@bellsouth.net>
Source record: 74380

Ken,

It is nice to debate an issue with someone, obviously intelligent, who is confident enough of his opinions not to have to resort to flames and cussing. THANK YOU for that.

I can't see any laws being written to "outlaw" 2 meter, or other ham equipment. First of all, local law does NOT have the authority to do that. They *can* enact regulations/ordinances related to unlawful radio operation as it relates to CB. In that particular Public Law, amateurs are specifically exempted from local enforcement. Such issues have to be referred to FCC. As to states, counties, or cities that mistakenly attempt to regulate Amateur Radio, they get shot down pretty quickly. Most of the laws written thus far (locally) have specific exemptions for Amateurs. For example, some states have laws against mobile scanners. But all those I am aware of exempt hams from this. A couple years ago, a teen aged ham was charged with having a "scanner" by Kentucky cops (or was it Indiana?). The radio he had was a 2 meter HT. The charges had to be dropped and the radio returned or replaced. I read of a man who was a member of the Civil Air Patrol who had a VHF radio which was on as he pulled into a store. A deputy sheriff heard the radio talking and was about to charge him with having a "police receiver" until the fellow explained exactly what it was. Even I had a funny experience one day while on Interstate 40 east of Hickory, NC. I was happily cruising along talking on 10 meters when a sheriff's car pulled alongside. The deputies were from Indiana! (What in Heaven's name were Indiana deputies doing in NC??) After pulling alongside, they abruptly slowed down and paced me just behind. They were obviously VERY interested in my mobile HF and VHF antennas. I could tell they would've loved to pull me over to "investigate" this guy that had radios in his car. They had a CB as well, and I was amused to see them obviously changing channels in an attempt to listen to me. Perplexed as to why they couldn't hear me, they finally pulled alongside again giving me the "cop's evil eye". I just smiled at them, knowing they couldn't do a durned thing to me, and they sped away out of sight. I just hoped they would run into NCHP that would give them a ticket for speeding! LOL!

Where a jurisdiction is *about* to pass laws attempting to "regulate" amateur radio, ARRL, and other hams who are about to be affected by such, usually get a handle on it quickly and successfully (so far) lobby for Amateur exemptions. Even FCC has a regulation (PRB-1) that states (rough translation) that municipalities, counties, etc., must not restrict Amateur antennas beyond that which meets their minimum needs, and must accomodate hams to a reasonable degree.

The trouble with the export radios is that you and I both (I think)
know that these radios are sold as "10 meter" radios, but with the
obvious intention of being sold to the CB market. They are, of course,
illegal because they are usually higher powered and are easily modded
to work on 11 meters as well. Trouble is, the mods don't remove the
ability to operate on at least ONE ham band, and some are then sold
as having "400 channels". Sellers brag that a certain model will cover
from 24 thru 32 MHZ. Therein the objection from hams. IF the people
using export radios weren't ON 10 meters, the hams wouldn't be raisin'
heck. It's like this kinda: Let's say you "own" or lease a piece of
property. One day you discover somebody on that property hunting with-
out permission. It won't matter to you how they got there, only that
they are trespassing on YOUR land. More than likely, you'd run 'em off-
I know I would. Same thing applies with the 10 meter issue. The hams
have "permission" to use that spectrum by virtue of the fact that they
possess a license issued by the caretaker of that spectrum. The
"truckers" that are trespassing DON'T have permission. That's really
what's going on. And, I am certain, something WILL be done about it,
not only because hams are complaining, but because ITU member nations
will complain as well. That will create even more pressure for action.
Things are in the works now. It may be slow, but it will progress.
I hope, to a successful removal of these "trespassers" from where they
don't belong nor have any right.

Best,

Jerry

If your mast/tower is radiating, and it sounds like it is, then you
need to de-couplle the antenna better. You can try, if you can
work out the mechanics, a de-coupling method used in an
illustration that I'll post on alt.binaries.picture.radio

It's called coax_sleeve.jpg The bottom 1/4 wave skirt
de-couples the antenna. This de-coupling is termed
Bazooka de-coupling.

If this is to involved then you can use 1/4 wave or slightly less
wire or pipe that runs parallel to the mast. Connect the top of this
wire to the center conductor. Connect the bottom to the mast. This
is linear balun used to de-couple.

## 2715. Amp help needed.

Newsgroup: rec.radio.cb
Date: 2001-02-28 03:23:37 UTC
From: Forever After <yearight@replay.here>
Message-ID: <3a9c6ecf_2@news2.one.net>
Source record: 74394

I am looking for an Amp for my exported 10 meter radio converted to 11 meter. Yea Gary, an illegal amp damn it!
Right now I have a Palomar 250HD, works great but the pre-amp is dead and I'd like to have just a little more power. For the price, a bigger Palomar looks like the thing to buy. I can get a Palomar Magnum 500 for $249. That's about the max I can spend. What are your thoughts?

Thanx
Forever After

I sent this to the FCC just for Gary/Kari, oh8mfh

>what do you care if eei sells export radios

Hate to burst your bubble, OM. Lots of people care that EEI sells export radios.

>, just because you cantafford them

LOL. In my case, the "shack" contains 2 RCI 2950's, a 2970, a Saturn Turbo, plus a Kenwood xvcr and a FT890 with automatic antenna tuner. Add up the $$. How're you doing at your place? By the way, the 2950's are in service as beacon transmitters. How's that for having money to burn?

>and dont respect what you have ,

Whatever that means?

> buy the way get a realcomputer,and mind your own damn bussiness.

In his first speech to a joint session of Congress (2/27/01), President Bush said he will make certain that every child in America will be able to read and write.

Any chance this will be made retroactive to include participants in rec.radio.cb? <g>

>I disagree. The result will be peaked and tuned Cobra's which is basically
>turning a crap 4 watt cb into a crappy cb with a VERY dirty final @ 20
>watts.

Correct. This was exactly what we had before the proliferation of HR-2510s, RCI-2950s, Galaxys, etc., in the late 80s. The "peaked and tuned" Cobra 148GTL was the freebander's weapon-of-choice, usually fed into a dirty linear.

If someone is going to run power and/or operate out-of-band, I'd much rather have them doing it with a radio designed for the purpose. Tends to cut down on the spurs and other nasty side-effects which disrupt communications on other bands.

This reminds me of their base antennas, back in the 70s. Radio Shack made a 5/8 wave antenna that "looked similar" to the Hy-Gain CLR-2, but cost about $10 less.

The difference became obvious in the first good ice storm. The CLR-2 was still standing while the cheaper RS clone was bent, broken, had collapsed radiator sections, lost end caps, or all-of-the-above.

Like everything else in life, you get what you pay for.

>

And now, the REST of the story......

The person transmitting illegally on 10 meters has been tracked and caught.
He's been caught and fined before. Now it's some hard time for the CB
outlaw/hero.

> The roger beep sounds like fingernails on a blackboard

The sound of the cell door echos off the hard walls of the tank......

> the Ham now
>busts into tears.

The CB Outlaw fights back the tears. He's locked in a cage, and the other
"residents" look tough.......

>He feels soiled, dirty, violated!!!!

CB Outlaw feels soiled, dirty, and he WAS violated. Numerous times.....

>Am I right?

No. But I am......

# 2723. Re: Truckers and FCC enforcement

Newsgroup: rec.radio.cb
Date: 2001-02-28 03:52:50 UTC
From: qrm2000@aol.com
Message-ID: <20010227225250.13119.00000332@ng-bj1.aol.com>
Source record: 74404

It is astounding how little Ken knows about anything. He must get his knowledge listening to Channel 23, or hanging out at the local CB shop.

>Yes but these issues only occur when the radio is keyed up and set for a Ham
>freq!

That's what we're after, Son.

>But an export radio being sold or used in a vehicle within the legit
>freq is NO threat.

Pay attention, please. Nobody cares what kind of rig you run on CB. But going above 28.0 will get you plenty of attention.

> You want to see ALL 2m mobile stuff BANNED even with a Ham liscence?

Laws restricting the use of cell phones are being closely monitored to make certain there is not an adverse effect upon Amateur radio.

>The way they are written is vauge
>and can be interpreted as banning ALL transcievers, some have an exception
>for truckers which means that your legit mobile Kenwwod 2m or duel band rig
>can be criminal while the trucker with the dirty linier goes scott free!

Not even worth an answer. The laws are recapped in QST frequently. Go read 'em.

>Just go after the guy encroaching on your territory and forget the cb
>bandwidth and what the other guy may be using.
>

Whew! Maybe Ken gets it, after all.....

That's exactly what hams are doing. The only problem you've got, Ken, is the outlaws are bringing down so much heat on the CB radio service that everyone will be affected. And YOU'RE defending the outlaws? I think you owe the group an explanation. Why, Ken? Why are you defending the group that's putting the entire CB hobby under microscopes?

The issue is unlicensed operation within the 10 Meter Amateur band.

It has been stated numerous times that hams don't care what goes on in the CB band.

Is it your intent to defend what's happening with illegal operators on 10 meters? Tell us where you stand on that issue....

Why is it that when small people can't respond intelligently, they resort to vulgar language? You aren't worth the time to argue with, but nobody here actually believes that 'just beginning to learn the code' in any way compairs to gutter Spanish or German. What you have managed to do is to pick out letters but as a beginner, by definition, you aren't copying whole words yet. It doesn't work like that, so if you were trying to listen to some guy sending something off color at 25 wpm, you wouldn't know it anyway. In truth, the cw ops are generally grouped into a couple categories--rag chewers who do precisely that-and they wouldn't do it long if they were argumenative, and the dxers who send 5nn and then run. Even in a monster pileup where some lid is sending on top of the dx station, it rarely goes beyond 'up'. In any event, keep practicing daily to get your speed up.

Oh, by the way, happy birthday. How does it feel to be 39?? ;-)

Hi,

Who can tell where to get Balun TP-104 or something about it?And the
relevant or possible manufacturer?

Thanks!

Angela

Chris,
The 'problem' is probably in the amplified speakers that
you use. Very few, if any, speaker systems for computers
are shielded in any way. The RFI can also be getting into
your computer by other ways. Any port of a computer is
a potential source of RFI (I'd bet on the speakers though).
You can try the common things, ferrite beads, shielded
cables, etc. There's no way of knowing before hand which
(if any) will 'cure' the RFI problem. After doing all that
you can on your 'end', you can try talking to the CB'er. I
have no experience with CB'ers in Canada, so can't give any
advice about them. I can say that a confrontational attitude
will make the problem worse, not better. So, good luck...
'Doc

> to size threads in the base of the mount where the antenna screws into,
it's
> all good man.

They show two styles one says so-239 other says 3/8. The 3/8 is standard for
ant. I think
and the so-239 is where the 259 connects rite? So then why advertise 2
types?

> When you decide to get serious, build a roof rack that you attach a
bracket
> to, this will eliminate
> drilling thru the roof.

I have a roof rack. The bars going accross are metal and the end pices they
go into are plastic. Can I run a ground to one of the screws holding on the
rack and be ok or will that make a proplem?

> Get a center-loaded open-coil competition stlye broad-band 1/4wave design

Sure, CB antenna makers make reliable and good antennas: a friend of mine tested his 5/8 GP CB antenna on 20 meters and to everybody's surprise it tuned up real good. The difference in frequencies didn't bother the stick one bit. Think about it.

Gary

What do you guys have in the 1.8-2.0 (160 meter) range? I know we have
3.9-4.0 and 7.1-7.3 that you do not.

Back in the Stone Age, when 20 meters was 14.0-15.0, our FCC extended the
harmonic relationship to 5 meters, 2.5, 1.25 etc thru a 420-450 band. The
five and 2.5 were moved after WW2 but the idea lived on.

Dick

# 2742. Re: magnet mount

Newsgroup: rec.radio.cb
Date: 2001-02-28 11:16:00 UTC
From: Mad Dog <lgssl@netzero.net>
Message-ID: <97imon$pgfnp$1@ID-20128.news.dfncis.de>
Source record: 74422

Stargun is one of many that make these competition style antennas.
These antennas usually start at $75 and go up, i bought mine when traveling thru OK city from
a man called "Stryker", hence the name "Stryker Antenna".
Fully assembled the antenna is 6ft. tall, try to find one with a short coil and a long whip for
best performance.
A lot of truckers use these antennas because they are so broad-banded, although i have to
laugh when i see them angled forward at 45degrees,maybe their talking to God on 1 channel
and Satan on the other.
Try running fused power cables directly to the battery,neg. and pos.
That should cut down the noise,make sure the insulation on your plug wires is not breaking down
and causing interference,find a dark un-lit location and bring your index finger within 1/4" of any
plug wire, if you see a blue corona form at the tip of your finger the wires are bad should be replaced.
R/S sells a power-line noise filter if all else fails.
Current flows from pos. to neg. thru the battery and from Neg. to Pos. thru the circuit,
so pay special attention to your grounds.
The fuses should be as close as possible to the battery.
Connecting the roof rack to chassis should work fine, if not then jump from the antenna bracket to
the chassis/body.
Good Luck neighbor, hope i helped u out some.....

Try posting using regular text instead of html. That is if you can figure out
how.

# 2745. My point - if anyone's interested (rec-radio-cb)

Newsgroup: rec.radio.cb

Source record: 74425

My point in getting access to rec-radio-cb was to show you guys how easy it is to get there. Maybe it's as easy as getting in illegal linear, directional antennas, export radios, or even using a fake ham callsign. I do not underestimate the signifigance of CB radio, it's a real good hobby for anyone. However, if a Cber starts to become illegal, there's no end to it, is there? Or could e.g. Tim or Scott tell me if there's a borderline somewhere: would you build or buy a 4 kW linear and use it on 27 megs? Would you start using my call on 14 megs?
Becoming a ham means that you take some responsibility in your actions: most hams are capable of using extreme output power, modifying their rigs etc. Some of us are as guilty of being LIDs as some of you guys are, I'm sure, but I certainly hope that ham radio will be a decent hobby in the future, too, and that anyone who has a CB rig could have a clean conscience. Don't forget that hams like me only get pissed off (pardon my French) at the arrogance of the freebanders, plus that many of us get real difficulties from intruders on the ham bands.
I'm ready to start a cease fire with the illegals: no need to mess up your ng rec-radio-cb because of me: I bet you can't create a 100 per cent safe haven for the illegals. If it's real important to you, do it, and I'll be there in no time at all. remeber that I'm a linguist, and very familiar with the American everyday life, language and other phenomina in good ol' USA. In addition, there might be others who are genuine American Cbers or hams who SIMPLY DON'T LIKE ILLEGAL RADIO and could start causing you some trouble in the eventual new ng or whatever.

I urge you to think about my message, folks. If you simply want to post messages with insults, do it out in the open, knock on my door and gimme a smack in the face. if you can lick me, so be it.
Looking forward to receiving some replies with good suggestions.

73, Kari/Gary, oh8mfh
after having read the recent
"Troublemaker" msgs in rec-radio-cb

Any hams who want can work me on 14.267 usb on most days - my call there will be oh8abi, the club call.

Yea but what's the point. You'll get equal performance out of a 1/2 dipole made of wire. The only plus part of the star duster is that the feedline is effectively decoupled because it is routed through the mast. Big deal.

>> > they get away with F this and F that S#*%

I am a CW operator. I have been a CW operator since 1961. I have been a CW operator on ham bands, military circuits, and commercial ship-to-shore circuits communicating with radio operators of all nationalities.

One does not hear profanity being used on CW.

I've always held the theory that it was too much trouble to spell out!

If you are just learning Code (as you say), the problem may be that you have not learned the "second" code--the abbreviations used to save time by not having to spell out everything in full.

"GM DR OM TKS RPT UR 589 QSL BURO" has nothing to do with jackasses. <g>

> have to be referred to FCC.

But laws to that effect have already been written. There were a few cases some years back that involved local hams, mobile scanner laws, and the fact that their 2meter VHF radios could tune police frequencies. The fact that the radio in question had extended receive (as many do), the police considered it illegal under their mobile scanner and receiver law. The fact that the ham was licensed to use it on 2 meters was (at the time) irrelevant. It took a court battle (which costs working people like you an I) to make an exception for the ham. In many PRB-1 cases, it also takes a legal battle to get a local municipality to back down. They figure that they have more legal resources that you do, and they gamble that you'll run out of money before you can win your case.

In many cases the law as written is upheld and it is up to you (the ham) to prove his case (an expensive and time consuming process).

> needs, and must accomodate hams to a reasonable degree.

The ARRL is often not aware of every small town that writes restrictive laws that affect ham operations. Many time the ARRL will assist with legal counsel, but the burden of proof still sits with the ham in challenging the law. In some PRB-1 cases, the ARRL and hams have lost, simply because the town in question has many more people opposed to "ugly radio antennas and TVI", who wield more political clout.

> I hope, to a successful removal of these "trespassers" from where they
> don't belong nor have any right.

That is certainly the main reason for the huge increase in intruders into 10 meters. But what can realistically be done? Truckers, on the move, are difficult to track. Spot checks are costly, and unless the problem is demonstrated to be an impact to public safety or welfare, it would be tough to justify the additional law enforcement manpower required to spot check all vehicles with antennas passing through a certain location. The FCC currently doesn't have the budget, and the intruders know it. The best we can hope for is that enough of the intruders get made examples of, that it scares many of the others into withdrawing back below 28.000.

If legislation were enacted to restrict the sale of 10-meter radios designed primarily for illegal CB operation, those 2950/2970s of yours would either become much more expensive to purchase or would no longer be available at all.

>Laws restricting the use of cell phones are being closely monitored to make >certain there is not an adverse effect upon Amateur radio.

What you fail to understand is that there WILL be an adverse effect on amateur radio, due to anti-cellphone laws and the enactment of local CB regulations.

Every car with an antenna will now become a target for revenue enhancement. Sheriff Buford T. sees those antennas and the cash register rings in his head.

Besides, what makes you think the cellphone industry will stand still for legislation restricting the use of their product...while amateur radio receives an exemption? The cellular telephone lobby is HUGELY influential with Congress. This is why we can no longer purchase new radio receivers which receive cellular frequencies, why it is a federal offense to even *listen* to these frequencies, and why federally-mandated warning labels are now required on every scanner sold...reminding the user that it is illegal to listen or to modify this equipment to receive cellular phone frequencies.

If a battle ensues, who do you think will win? The cellphone industry, or the ARRL? If you chose "ARRL", I have a beachfront condo in Newington that I'd like to talk to you about.

Once again, you attempt to defuse the issue. Typical "Holy Hambo" response...when confronted with the hypocracy of their actions, they attempt to sidestep the issue and switch the focus to the other party.

No, I don't defend the illegal operators on 10 meters. Neither the out-of-band CBers, nor the hams who are also operating illegally by telling the CB'ers to get off the frequency (one-way communications, communicating with an unlicensed station) or playing music, sound effects, etc.

I feel sorry for you Tim. You just can't seem to keep your fingers away from the keyboard when your read my posts. All your blustering about killfiles is getting to be a big joke on this news group.

> hey leland. i'm aware of all the bands.

That's good. So what your fixation with 2m? Jealous? You mention it all the time.

> perhaps the hams in my area arent
> though because they see very little use. as far as the over seas bands go, sure
> i know about them.

So "perhaps" you don't speak with any real knowledge about them either.

> after all i speak with people in those countries daily on 11
> meters and get to speak with them about such things. maybe in your local area
> things are clean but wake up and smell the whole wide world.

You may have spoken to them for a short while on the air. I have been to numerous countries, visited with the people in their homes, and had dinner with them. And that was over the course of several days to a couple of months. You learn much more that way than a short QSO on the air.

> there have been
> alot of highly publicized vhf/uhf problems here in houston as well as
> california new york and other places where theres any big population. ask the
> people in berkely california.

The difference Tim is those people know they are operating illegally, and the local Ham community is working to clean up the problem. In your case Tim, you are part of the problem, with illegal 11m operations! So why don't you clean up your act first, you're no saint, and most certainly not an example of a good CBer either.

> as far as the alfa tangos go, your just
> repeating what you read here on the internet like you do everything else. its
> not true.

Oh really? I guess my hearing must be going bad. I heard the information on the air, right from the mouths of the pirates themselves. Tim not only do you have a problem with selective observance of rules, your selective in what you chose to hear and remember too.

> Re: Problem with export radios

Big snip of irrelevant junk, and back to the topic of the thread. We can
split hairs about the "other" stuff at a later time.

> Agreed. Go straight to the freeband.

And that is the essence of the problem. The single reoccurring theme on this
news group is the total lack of any desire to clean up 11m by many of the
Pirate CBers posting here. CBers like to point out that Hams like to look
down on them, you know why that's true in part? It has a lot to do with
attitude, the Hams are very serious about keeping our house in order, and
cleaned up. Many CBers don't even understand the concept, or reject it, so
somebody else, Hams, have to put up with the mess when it gets too bad.
That's the point we are at with the issue of export radios, and CBers
showing up in the Ham bands using them, 10m in particular.

I got back on the expressway easy enough with the help from a local Toledo Ham. The fact that I could bypass the mess is proof positive that an alternate route existed.

Point of my narrative was the CB was of no use in this case. If the idiots on the CB had kept their mouths shut, the frequency would have been clear for somebody to provide helpful information. As it was all the complaints did was tie up the channels with useless crappy comments.

The FCC rating of the equipment is not relative when discussions
involve the reception of interference to the computer itself. The
class rating is relevant in determing the probability of interference
coming FROM the computer.

Vandalism is hardly an effective solution to such problems - and
besides, pinning his coax is useless unless he's using stranded copper
center conductors, you'll never be able to push a pin through a solid
copper conductor (ie, RG-213)...

>job in my garage, using old coat hangers... :-)
>

FYI, some of the most impressively performing antennas are all
home-brewed, or easily duplicated in the garage using old coat hangers
(a favorite for VHF and UHF work, by the way), pieces of
copper/aluminum tubing and wire of various types, guages and
materials....

For what it's worth, I constructed an antenna from a "trucker's"
mirror mount CB antenna, a wooden box, an angle bracket and four
pieces of 20-guage wire, which I placed on top of a friend's carport
roof. With this antenna I was able to work stations in Europe on a
Radio Shack HTX-10 (25 watt 10-meter).

The point I'm making here is.... the BEST performing antennas I've
ever seen have ALL been homebrewed

The route you took was probably not open to trucks. Believe me Leland, if there were that many trucks lined up, there WAS no alternate truck route, as much as you would like to believe there is and blame the truckers for not being able to find it. Who do you think gives the majority of directions, whether it is alternate route information or not, on channel 19? The Locals? Uh-uh! The truckers, thats who.

STOP RIGHT THERE!

If I were the FED, I would read that line as:

If I do this, I will have at least half a million voters really angry with me.

---

Bottom line.....

George Bush cannot afford to have half a million voters angry at him right now; much less 4 years from now when the impact of such a ban would really start to hit those half million voters.

If even half of all the CB radio operators ever got organized, they would be a voting bloc that would have an extremely strong 'voice' in Washington.

Possibly strong enough to cause a re-allocation of the 10 meter band 'for the good of the many'.

If they gave the truckers 10 meters I'm sure they would get the trucker's votes, and that would unload a lot of the existing problems off the regular channels.

One reason folks buy amplifiers in this area is because that is the only way they can reliably communicate past the truckers driving through town 50 feet apart and using their CB radios in such a way that they are oblivious to the other folks trying to use the frequency.

If you live in a town that happens to be a trucking 'HUB' like Chicago, that is a continuous 7 X 24 interference problem.

I know this post will alienate a lot of ham operators, but I am just trying to show you what the 'downside' of all your efforts to get FCC attention could possibly be.

So I'll get off my soapbox now.....

---

I am leaving for Daytona tomorrow!

If anyone else from the newsgroup is planning on attending Bike Week you will most likely find me with the Joliet Outlaws or the Detroit Outcasts.

Just tell 'Rol' or 'Sonny' that you are looking for 'Twelve'.

And I'll buy the first round!

Regards,

#12

What did you expect? As soon as cbers leave, the wannabedogooders follow. Now imagine that. Wonder why that is? Perhaps it's because without cbers, they are no one? Their own licensed kind don't even take them serious.

Re: Problem with export radios
Big snip of irrelevant junk,

Just 'Cause you say it don't make it irrelevant.

and back to the topic of the thread. We can split hairs about the
"other" stuff at a later time.
Agreed. Go straight to the freeband.
And that is the essence of the problem.

NO! That is the essence of YOUR problem. You are quite arrogant to think
you know what is best for the band and what everyone wants.

The single reoccurring theme on this news group is the total lack of
any desire to clean up 11m

Oh man! Read just what you wrote. Because there is a LACK of something
YOU deem necessary, it is reoccuring? Let me say it again, lack of, but
reoccurring? Oh man!

by many of the Pirate CBers posting here. CBers like to point out that
Hams like to look down on them,

only arrogant ones such as yourself

you know why that's true in part?

Doesn't matter why.

It has a lot to do with attitude, the Hams are very serious about
keeping our house in order, and cleaned up.

Good. Stay the hell out of mine.

Many CBers don't even understand the concept,

You are an ignorant fool to make such a statement

or reject it, so somebody else, Hams, have to put up with the mess when
it gets too bad.

Like the Liberty net?

That's the point we are at with the issue of export radios, and CBers showing up in the Ham bands using them, 10m in particular.

No, it isn't. If it was, you'd stick to the issue, and I would take no issue with it.

A quote -"Also ANY law will affect HAM equip since many Ham transcievers can be >operated illigally. For instance any.."

Not so. If the FCC amended their regs to simply state something like " No radio designed to operate in the 10 and/or 12 meter ham band shall have a "40 channel " selector switch, or have it's memories partioned in banks of 40 channels" also "no radio imported for operation in the 10/12 meter bands shall have a "band" or other selctor switch that is non-functional as supplied new. This wording would still allow all current HF tranceivers AS-Is, as well as leave room for radios like the 2950/2510, & close the loophole on the all the Connex/Galaxy/Mirage "40 channel" CB type 10 meter rigs, which by far are the most popular sellers to "bootleggers". To be fair to US importers/distributors, give them about 6 months after rule change to complete any pending orders, & 12 months after that for US distribution to cease. Retailers could sell any existing stock only, unmodified untill gone then thats it.....No one gets "hurt bad at once".

First the law in respect to cell phones would be for Hams operating mobile equip WHILE moving. While FCC's charter gives them control over all things over the airwaves. However since it's while operating a motor vehicle it would be outside of the FCC's domain. If you pull over and use your mobile Ham no problem but these new laws are under motor vehicle law which were written because people got "angry" seeing someone driving with a cell phone. Many of these laws can be interpreted as operating any transceiver while driving.
As for the bandwidth being property CB of all types is expanding and the 40 ch are way too crowded. The government serves the people and I think the number one reason illegal cb will stop or become rare has nothing to do with enforcement but the no-code license.
Within 5 years 10codes will be more prevalent on ham then q-codes. EEI is already gearing up for selling Icoms and Kenwoods. Tech license tests and books will be in most truck stops. For 100 gallons of diesel or more 1 weeks access to the TA repeater network.

Thanks for the offer but I do not have a CB in my truck nor on any of the bikes I am bringing down.

Besides, eating lunch would ruin the effect of the alcohol.

I told you how you can locate me, and I meant it.

You probably already know Sonny.

He is a big name CB'r from the Detroit area.

I thought all the big hitters knew him.

I have to stop on the West coast of your state for a day or so to take care of some business, but I should be ON Daytona Beach by Saturday afternoon.

Just look for the guy riding a Triumph in a group where everyone else has a Harley.

There will also be a cute little redheaded (natural) female who looks a lot like Ann Margaret keeping the sun off my back.

Chow,

#12

First off liner amps on cb are very popular. Therefore the FCC MUST change the regs to meet the needs of the cb user. The FCC is to regulate the industry based on the needs and desires of the radio community and to allow all users to enjoy their hobby. If there is massive disregard for a certain law then the law is probably at fault. The FCC absolutely MUST give some bandwith to the compitition amp community and surly have regulations concerning this activity but make absolutly no mistake. If American citizens enjoy and are passionate about a hobby like "keydown compititions" THAT activity is as legitimate as ANY HAM activity and MUST be respected by the US government and accomidated if at ALL possible or the government agency is the OUTLAW, not the hobbiest.
My reasons. First I am not into the whole compitition amp scene and my Geo Metro has just one amp and no radio. But I see they LOVE and ENJOY thier hobby more then many Hams do and the Hams are just trying to get them busted instead of asking" Can this new activity be promoted and enchoraged in a way that respects others rights. Say all CB liniers must be FCC approved and can keydowns can only be held between x and y freq? Since the Ham community as not and gone out of their way to disparage any cb'er who want to break out of the 4 watt confines and experiment without becoming a HAM frankly your gonna get allot of "CIVIL DISOBEDIENCE" aimed mostly at the Ham freq. Sometimes you guys sound like the tea lobby after the Boston tea party.

I'd lay odds that you heard that on the 3950 'Liberty Net' in SSB territory (CW QRM can be very annoying to a SSB QSO... unless the parties are armed with DSP)... I've witnessed only a very few CW ops who would bother to waste their time to even call someone a 'lid' in the CW bands (let alone use profanity), but even in the SSB arena it's pretty rare, whether in CW or SSB, considering the amount of activity.

Put the old puter in search mode and type "Stargun Antennas".
Big Radios.com also carries some mean antennas.
There is a post somewhere in this group from a guy that sells competition antennas.
The whine that youre hearing is possibly "AC Ripple", which is a small amount of AC that
leaks past the bridge rectifier in the alternator.
It usually is a small amount "less than 700millivolts", but any AC present in a DC circuit will
show up as noise, such as the whine you hear that varies with RPM.
In the old days that would tell me that a diode in the full-wave bridge rectifier had blown,
nowadays it tells me that the factory is making substandard electronic components.
